Read Before Use

The use of surveillance devices may be prohibited by law in your country. The Network Camera is not only a high-performance web-ready camera but can also be part of a flexible surveillance system. It is the user's responsibility to ensure that the operation of such devices is legal before installing this unit for its intended use.

It is important to first verify that all contents received are complete according to the Package Contents listed below. Take note of the warnings in the Quick Installation Guide before the Network Camera is installed; then carefully read and follow the instructions in the Installation chapter to avoid damage due to faulty assembly and installation. This also ensures the product is used properly as intended.

The Network Camera is a network device and its use should be straightforward for those who have basic networking knowledge. It is designed for various applications including video sharing, general security/surveillance, etc. The Configuration chapter suggests ways to best utilize the Network Camera and ensure proper operations. For creative and professional developers, the URL Commands of the Network Camera section serves as a helpful reference to customizing existing homepages or integrating with the current web server.

Overview

The SD9363 and SD9364 is a speed dome camera specifically designed to enhance low light surveillance in large coverage areas. Equipped with 150 M IR illuminators and a 30x optical zoom lens, the camera provides a superb low light image in the most challenging situations. The camera also adopts VIVOTEK's latest IR technology, VAIR (Vari-Angle IR). VIVOTEK's VAIR provides smooth vari-angle adjustment of the IR illuminators that adapts to broad coverage FOV when zoomed out and a highly uniform IR intensity to reach out to a far distance when zoomed in, while avoiding hot-spots traditionally associated with IR illumination.

The camera is the first PTZ surveillance camera with IR illumination to utilize H.265 compression technology. When combined with VIVOTEK's Smart Stream II technology users can obtain bandwidth savings of up to 80% compared to traditional H.264. By combining 1080p full HD resolution with H.265, IR illuminators, VAIR, WDR, and 30x optical zoom, the camera is able to capture fine details at top-notch quality, 24 hours a day, 7 days a week. The camera is protected by an IP66- and NEMA 4X-rated housing against rain, dust, and corrosion. The camera has a wide operating temperature range from -50°C to 55°C, ensuring continuous operation under the most extreme weather conditions and hazardous environments. This makes the camera ideally suited to monitor wide open spaces such as ports, highways, cities, and parking lots where high-level precision is required.

VIVOTEK further strengthened the camera performance with an IP66- and NEMA 4X-rated housing to protect the camera against rain, dust, and corrosion. The SD9364-EHL-v2 has a wide operating temperature range from -40°C to 55°C, ensuring continuous operation under the most extreme weather conditions and hazardous environments. This makes the SD9364-EHL-v2 ideally suited to monitor wide open spaces such as ports, highways, cities, and parking lots where high-level precision is required.

Revision History

- Rev. 1.0: Initial release

Package Contents

- SD9363-EHL-v2, SD9364-EH-v2, SD9364-EHL-v2
- Wall Mount Bracket / Screws and anchors
- Screws / Alignment Sticker / T20 and T25 L-wrench
- Safety tether anchor and screws, an RJ45 connector
- Quick Installation Guide
- IO Combo Cable (may come with one 1m combo cable or Separately Purchased)

Symbols and Statements in this Document

 **INFORMATION:** provides important messages or advices that might help prevent inconvenient or problem situations.

 **NOTE:** Notices provide guidance or advices that are related to the functional integrity of the machine.

 **Tips:** Tips are useful information that helps enhance or facilitate an installation, function, or process.

 **WARNING: or IMPORTANT:** These statements indicate situations that can be dangerous or hazardous to the machine or you.

 **Electrical Hazard:** This statement appears when high voltage electrical hazards might occur to an operator.

 **IMPORTANT:**

Below are the requirements for powering the the speed dome:

Power source	Power Consumption
DC 24V	Max. 63W (heater and fan on); Max. 35W (heater and fan off)
High power PoE	Max. 70W (heater and fan on); Max. 40W (heater and fan off), using VIVOTEK's AP-GIC-010A-095 & AW-IHH-0100 & AW-IHH-0200

Heater ON/OFF	IR ON/OFF	Consumption
PoH / PoE (95W)		
ON	ON	70W
ON	OFF	59W
OFF	ON	51W
OFF	OFF	40W
AC 24V		
ON	ON	96W
ON	OFF	81.5W
OFF	ON	70W
OFF	OFF	55.5W
DC 24V		
ON	ON	63W
ON	OFF	53W
OFF	ON	45W
OFF	OFF	35W

**IMPORTANT:**

1. These devices(IR LEDs) emit highly concentrated infrared light, which view angle(range) is smoothly varied depending on operation mode. To avoid risk of eye injury, please do not look directly at the LEDs at a near distance.
 2. Remember to use the camera live view to check if the IR illumination is active.
-

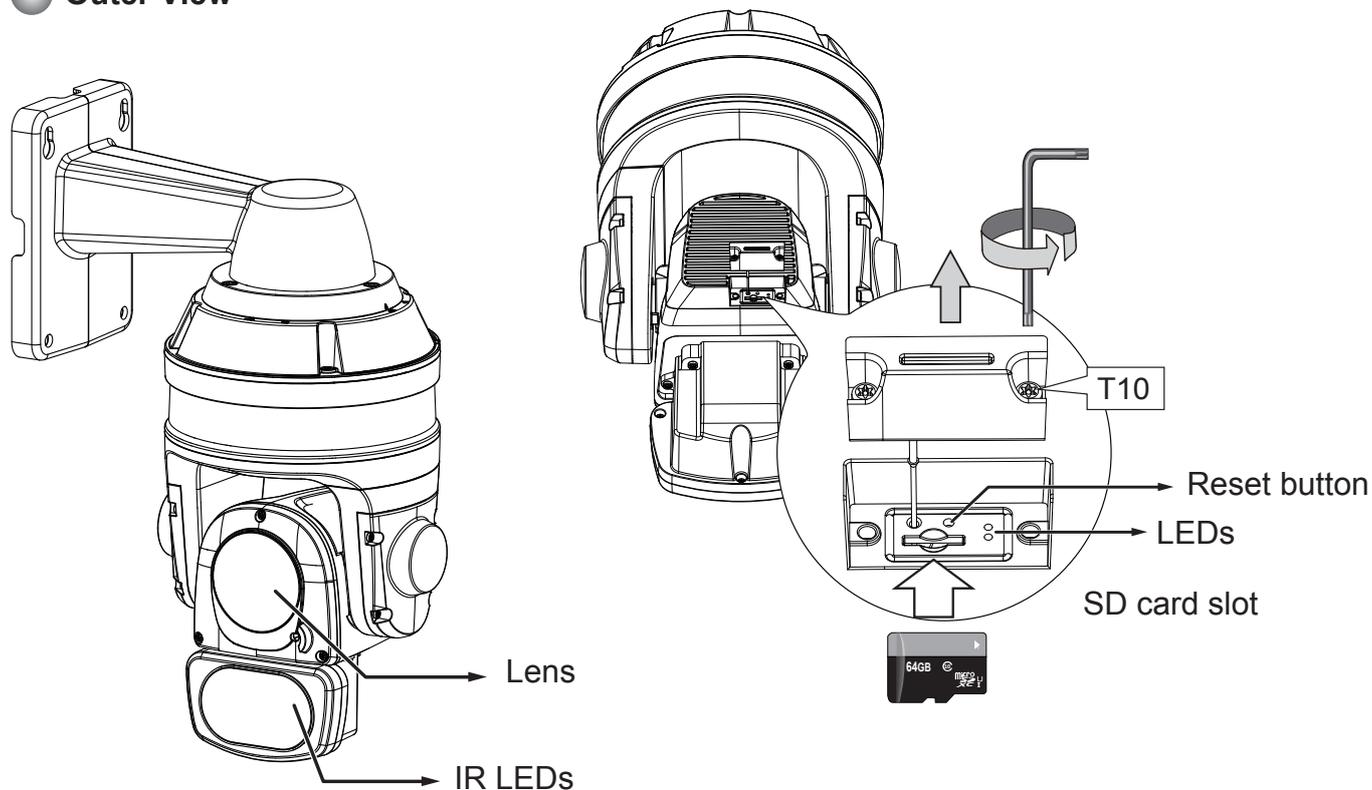

**IMPORTANT:**

If DC power is preferred, it should comply with: O/P: 12VDC, 2A min., L.P.S. per IEC 60950-1.

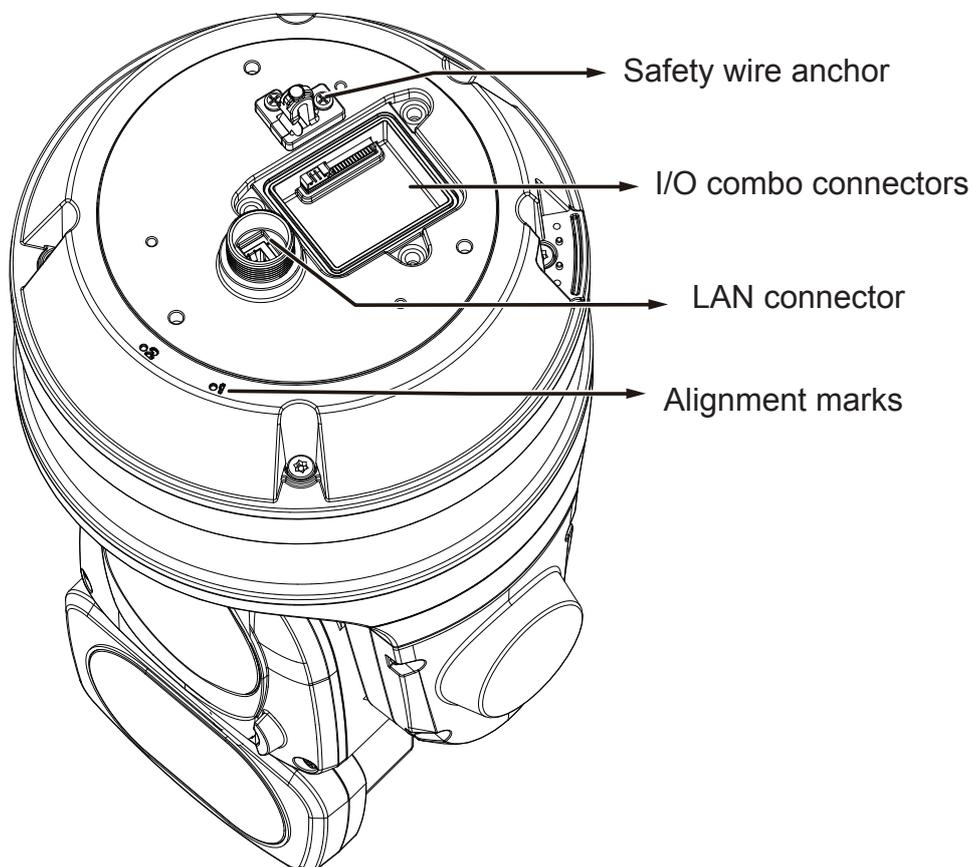

Si l'alimentation CC est préférable, elle devrait être conforme avec ce qui suit : Sortie : 12 VCC, 2 A min., alimentation limitée à conformité CEI 60950-1.

Physical Description

● Outer View

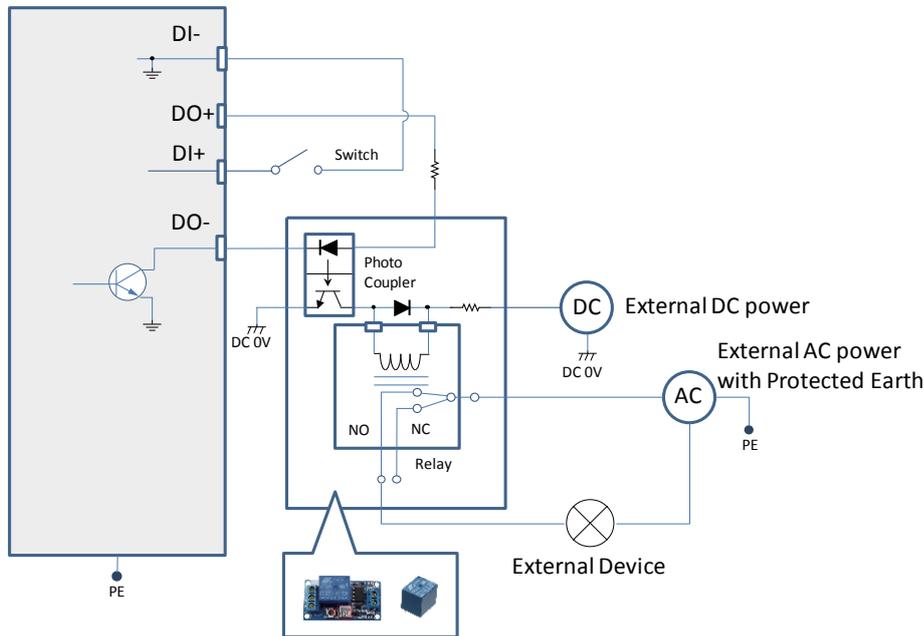

● Inner View

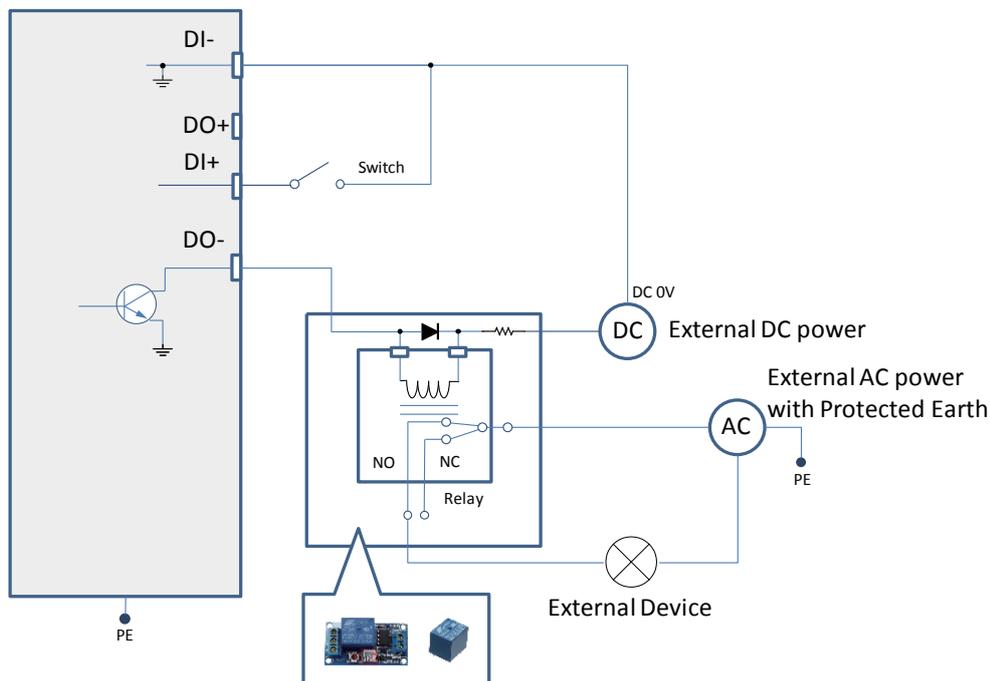

DI/DO Diagram

Dry contact with external DC power source to supply a relay. Dry contact is the safest connection to protect devices.

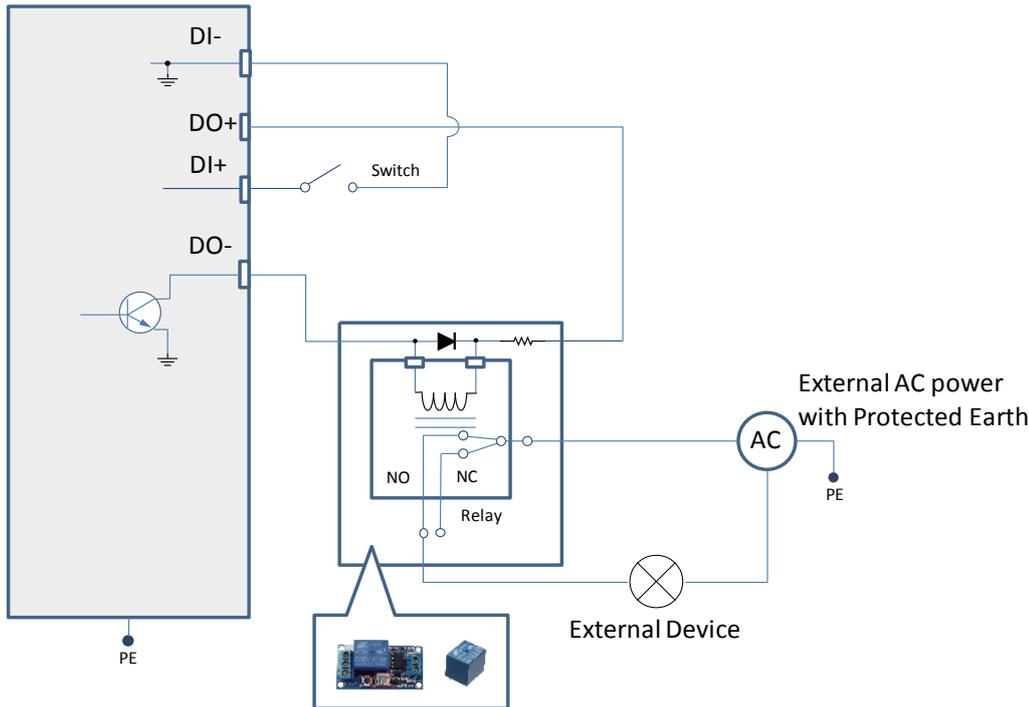

Wet contact with external DC power source to supply a relay.

1. The DO+ pin provides 12V output voltage, and the max. load is 50mA.
2. The max. voltage for DO- pins is 30VDC (External power).
In order to control AC devices, the above diagram can be taken in consideration. The diagram uses a relay to control the ON/OFF condition of the AC device.
3. An external relay can be triggered by using DO+ or by an external power source, depending on the type of relay you use.
4. In case of using an individual relay (instead of using a relay module), for protection against voltage or current spikes, a transient voltage suppression diode must be connected in parallel with the inductive load.

Dry contact and using camera's DO+ to supply a relay.

Status LED

Item	LED status	Description
1	Steady red	Power on and system booting
	Red LED OFF	Power off
2	Steady red & Green blinking every 1 sec.	Network normal (heartbeat)
	Steady red & Green LED OFF	Network failed
3	Red blinking every 0.15 sec. & Green blinking every 1 sec.	Upgrading firmware
4	Red blinking every 0.15 sec. & Green blinking every 0.15 sec.	Restoring default

Hardware Reset

The reset button is used to reset the system or to restore the factory default settings. Sometimes resetting the system can return the camera to normal operation. If the system problems remain after reset, restore the factory settings and install again.

Reset: Press and release the reset button with a paper clip or thin object. Wait for the Network Camera to reboot.

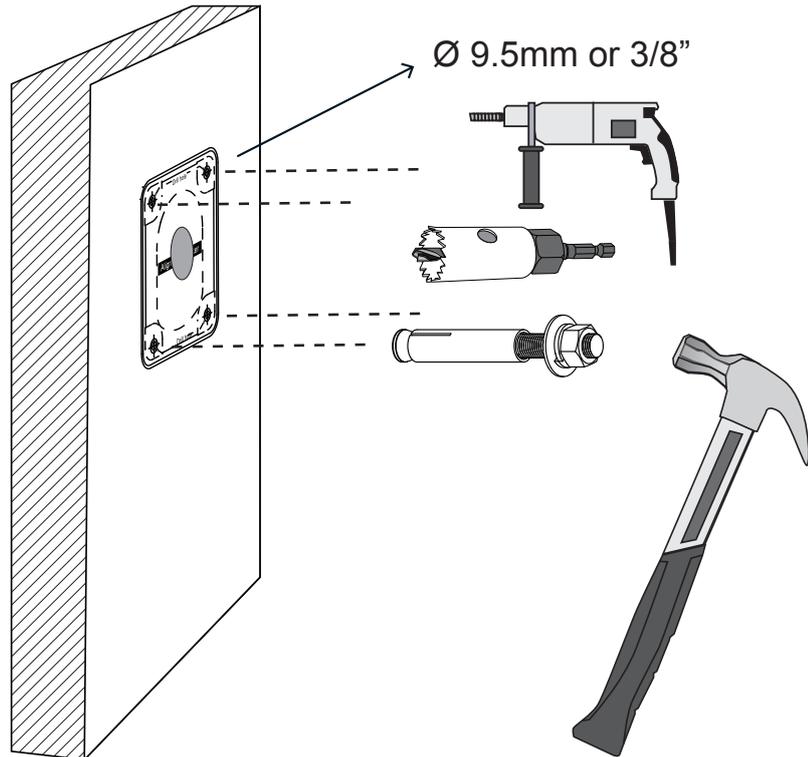

Restore: Press and hold the reset button for at least ten seconds to restore system defaults. Note that all settings will be restored to factory defaults.

SD/SDHC/SDXC Card Capacity

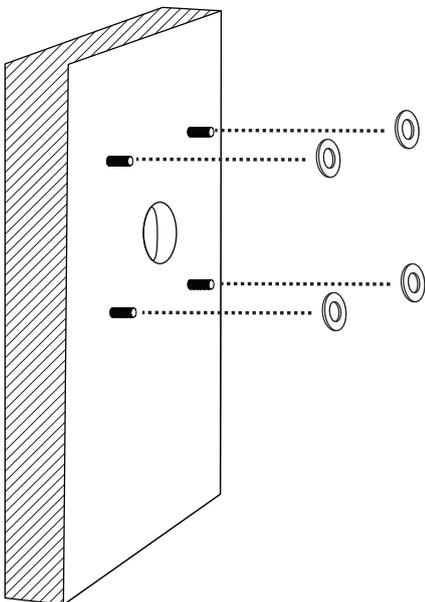

This network camera is compliant with **SD/SDHC/SDXC 32GB, 64GB**, and other preceding standard SD cards.

Hardware Installation

1. Jot down the camera's MAC address for later reference.
2. The camera weighs 6kg. Select a rigid mounting location to prevent vibration to the camera. Attach the alignment sticker to the wall.
3. Drill 4 pilot holes (9.5mm in diameter and 4cm deep) into the wall, and then hammer in threaded anchors. Note that you should hammer the anchors with hex nuts on them so that the threaded poles will not be deformed! If preferred, drill another hole for routing cables.

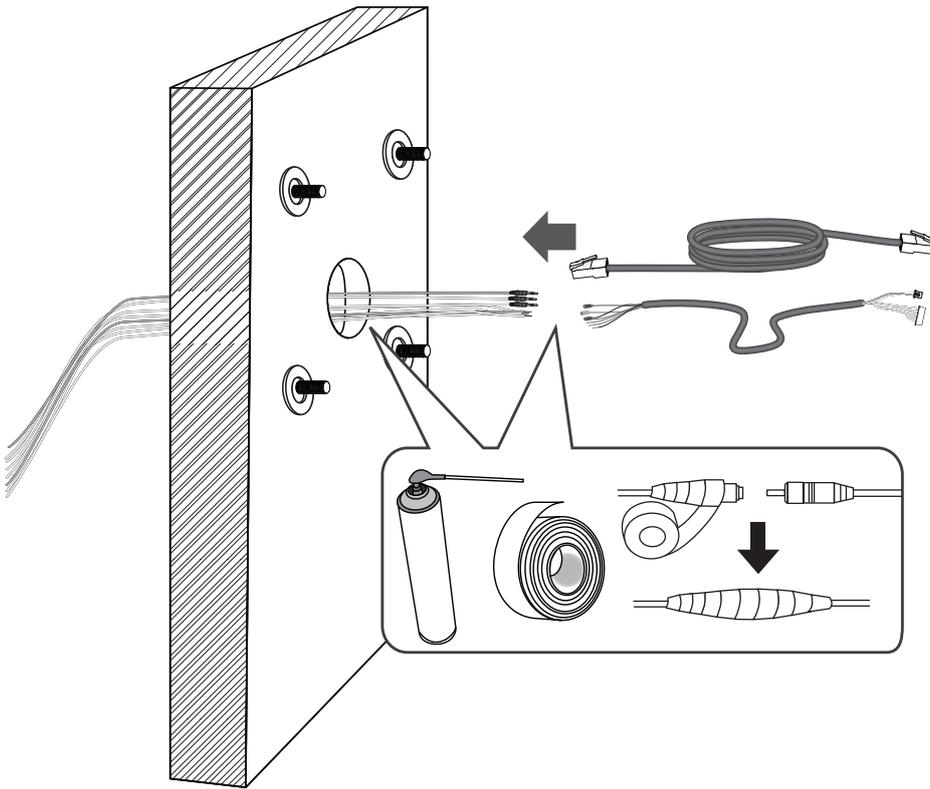

4. Remove the hex nuts, washers, and leave one washer on each of the threaded poles.

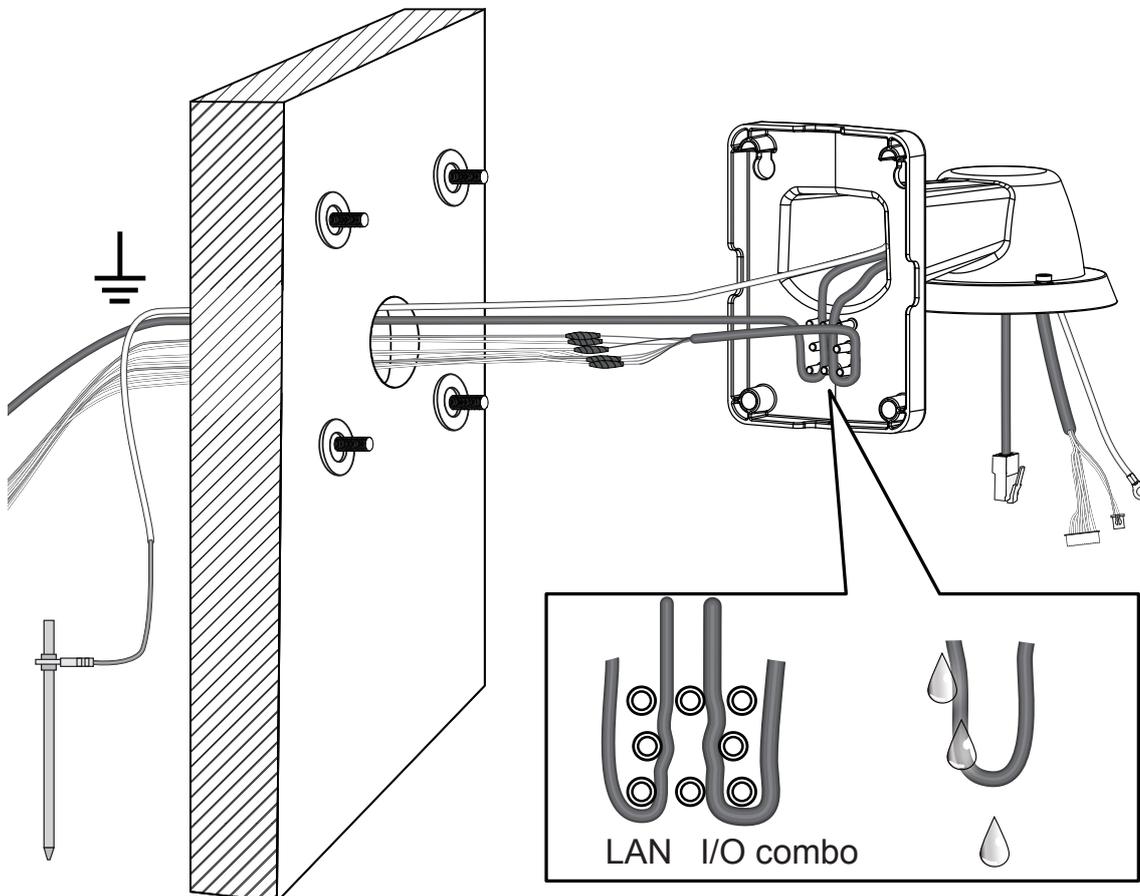

NOTE:

1. I/O wires are user-supplied.
2. Avoid touching the circuit boards to prevent damage by electro static discharge.
3. Use CAT5e, CAT6 cables only.

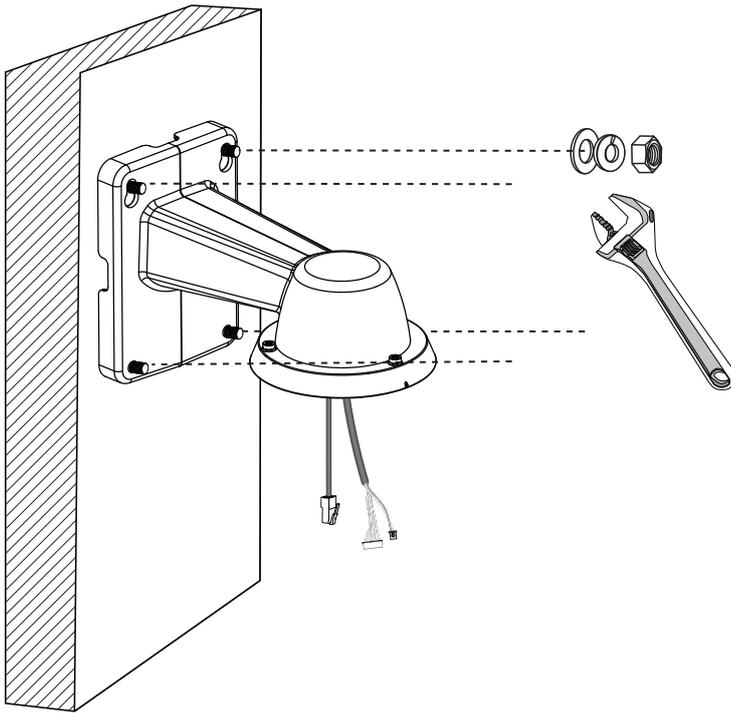

5. Connect power or I/O wires, and use foam tapes or seal foam to ensure the back-end connection is waterproof.

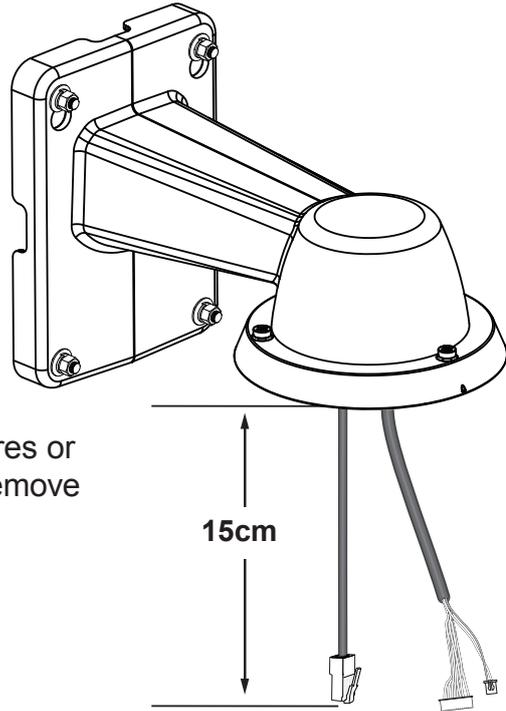

6. Route your I/O combo and Ethernet cables along the routing guide poles to form drip loops. Prepare a ground wire through the bracket.

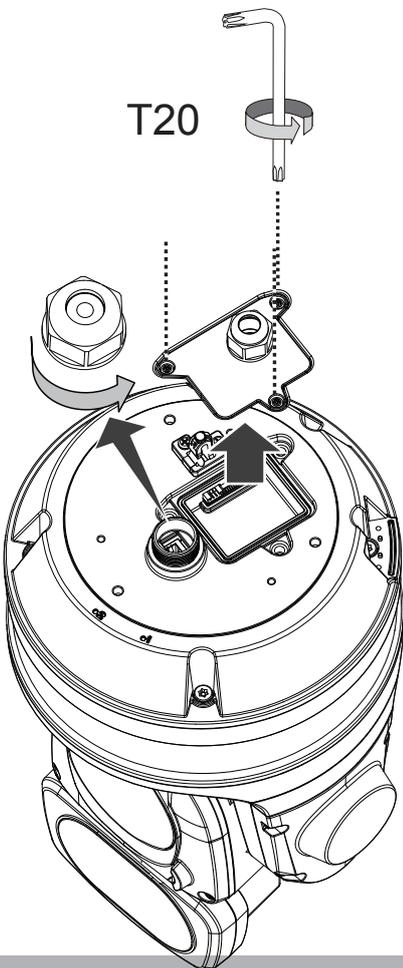

7. Secure the bracket to wall.

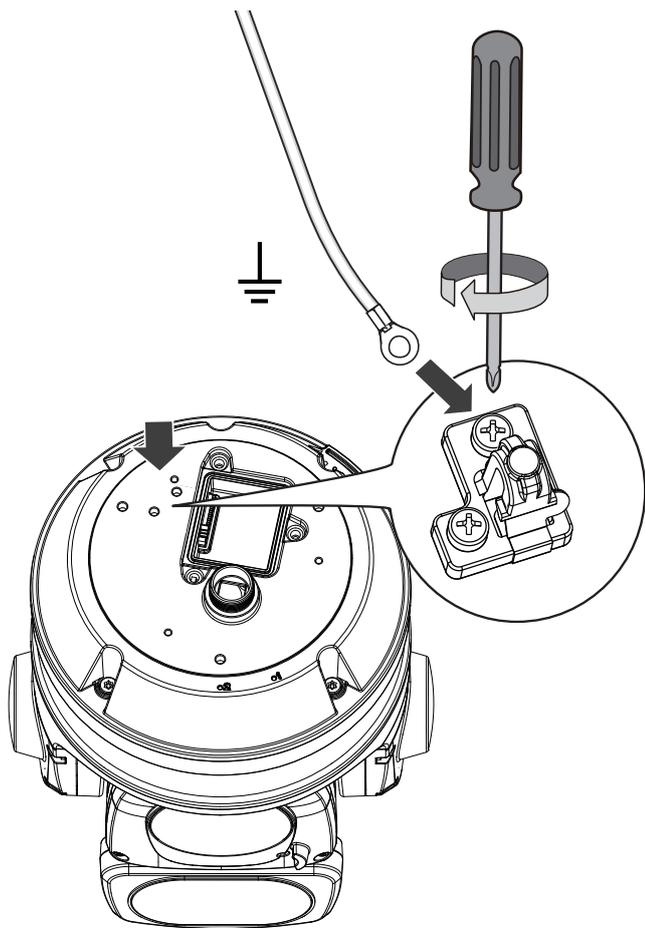

The cable length hanging on the outside of the bracket should be 15cm.

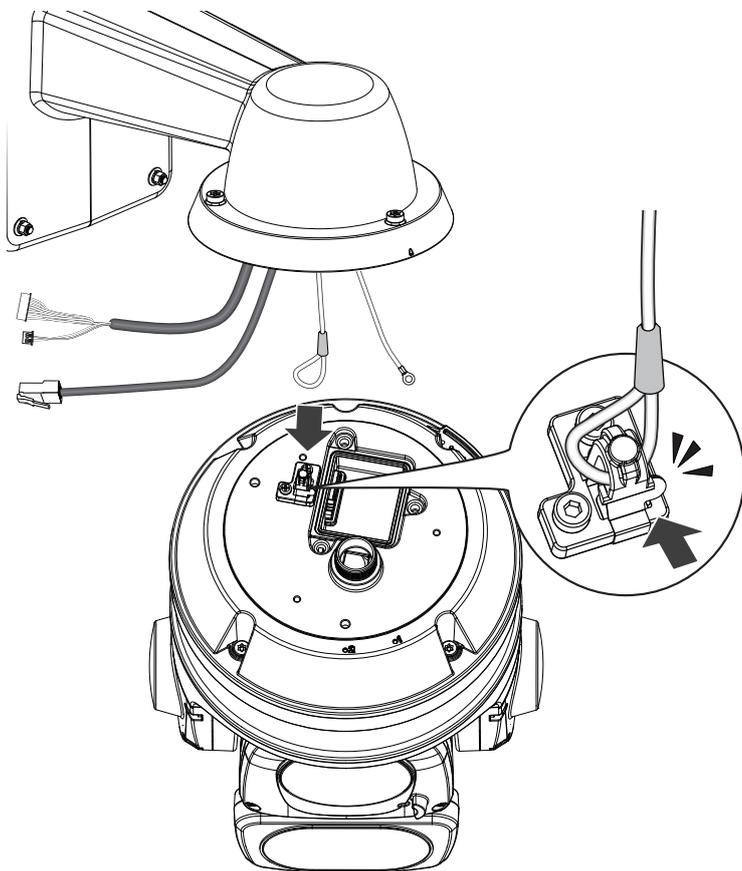

8. Remove the cable gland from the LAN port. If I/O wires or 24V power are preferred, use the T20 L-wrench to remove the top cover on the I/O connector socket.

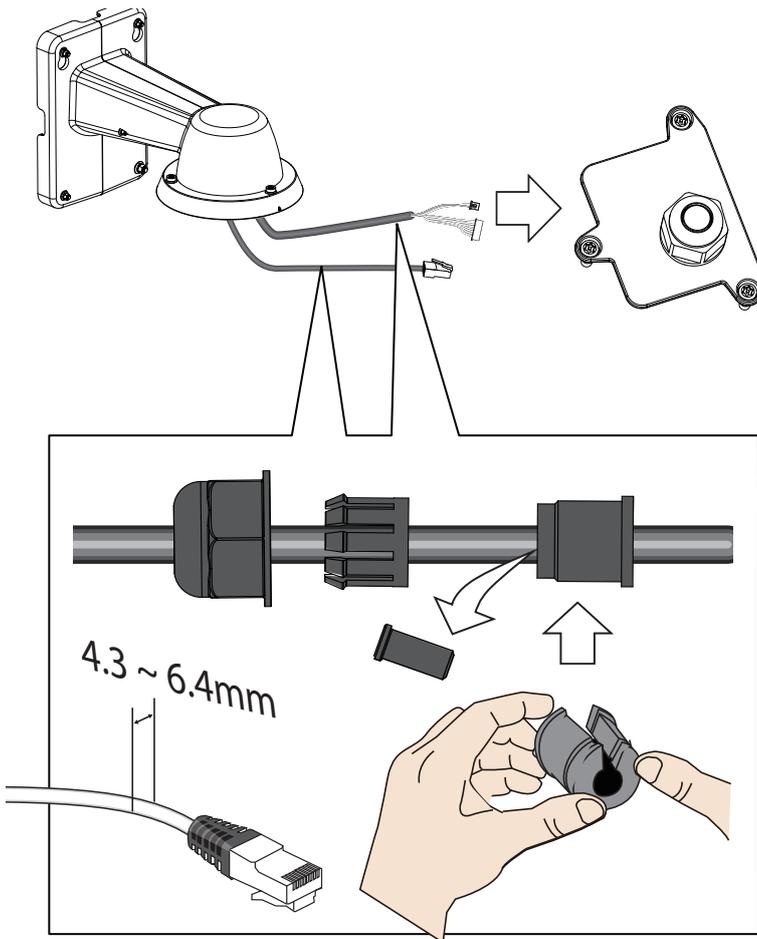

9. Install the safety wire anchor and secure a self-supplied ground wire to one of its screws.

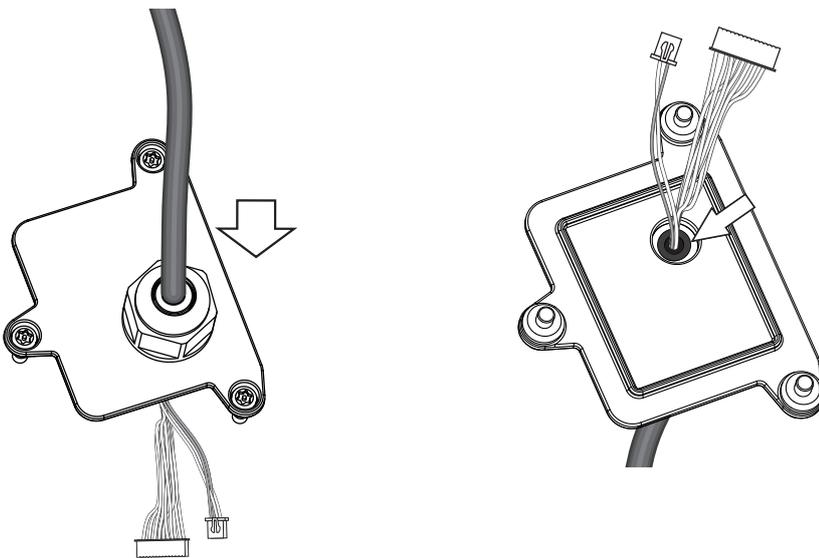

10. Hook up the safety wire between the bracket and the camera.

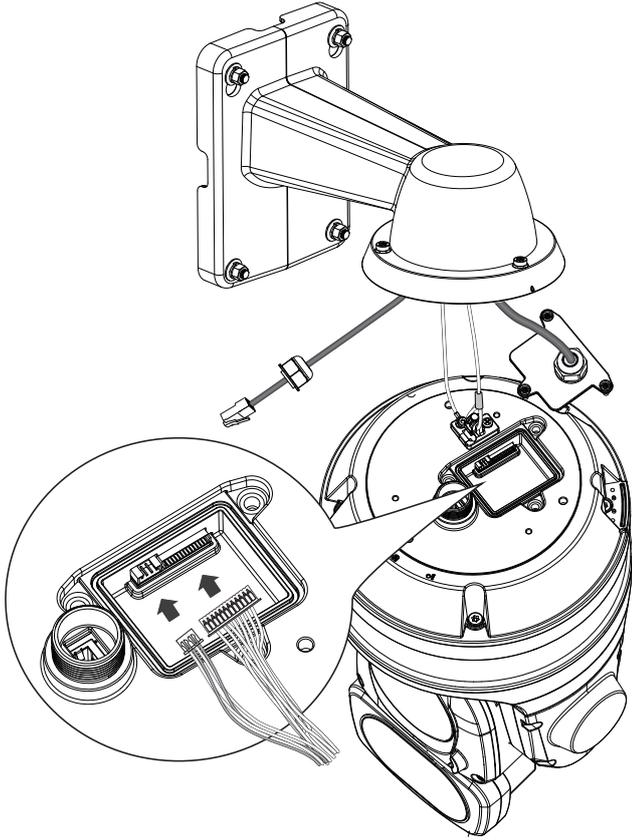

11. Install the components of the waterproof cable gland to the Ethernet and I/O combo cables.

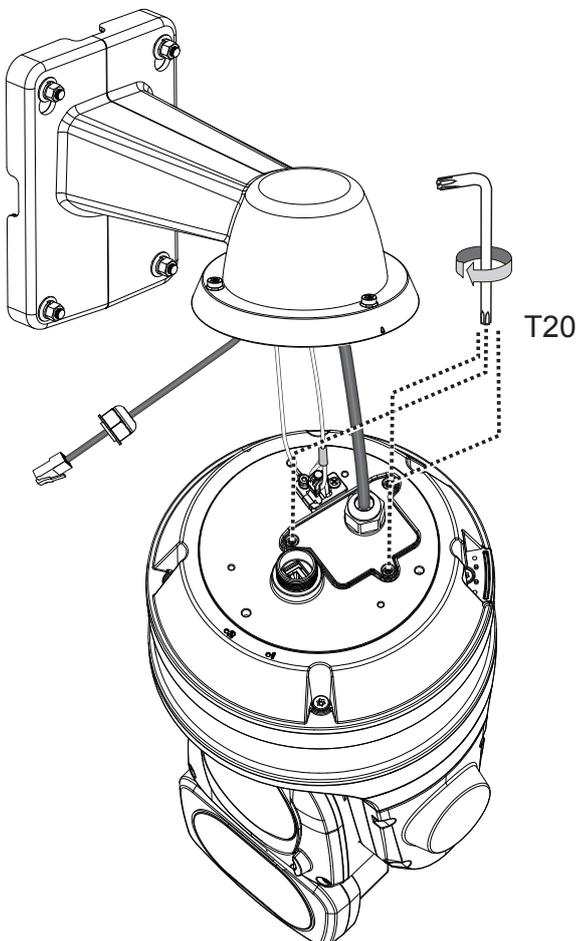

12. Make sure the outer jacket of the combo cable is flush with the cabling hole.

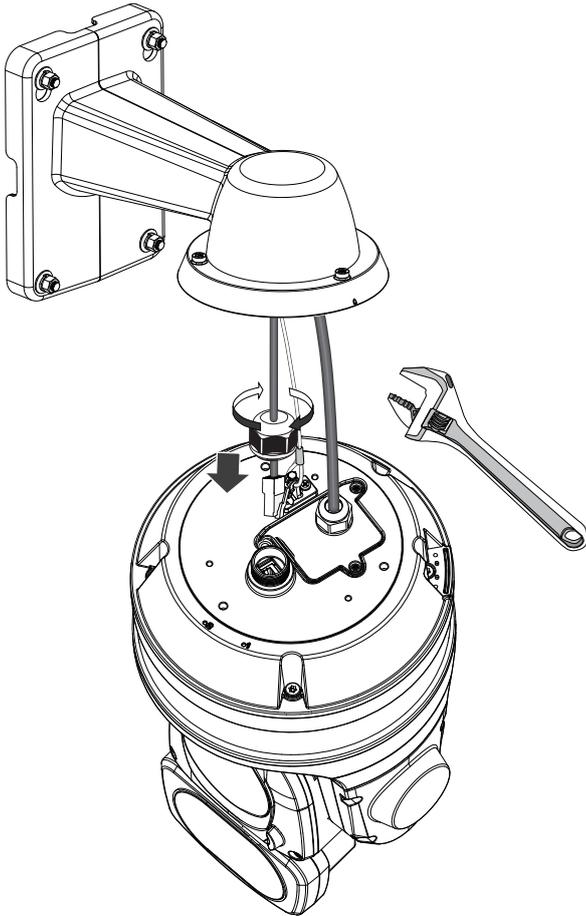

13. Connect the I/O wire headers to camera.

14. Secure the top cover of the I/O wire socket.

15. Connect the Ethernet cable (along with its cable gland) to the camera.

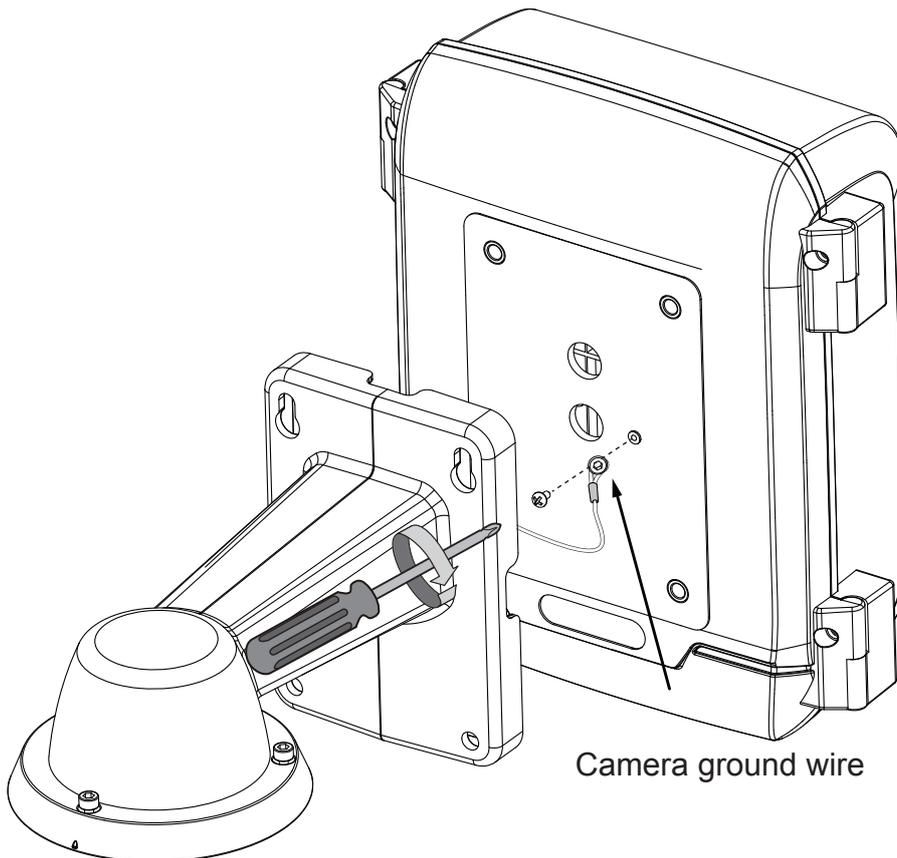

⚠ IMPORTANT:

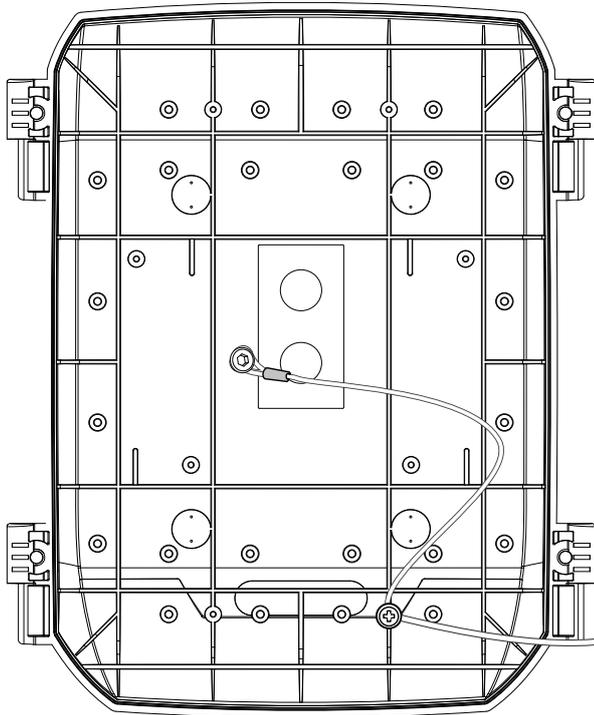

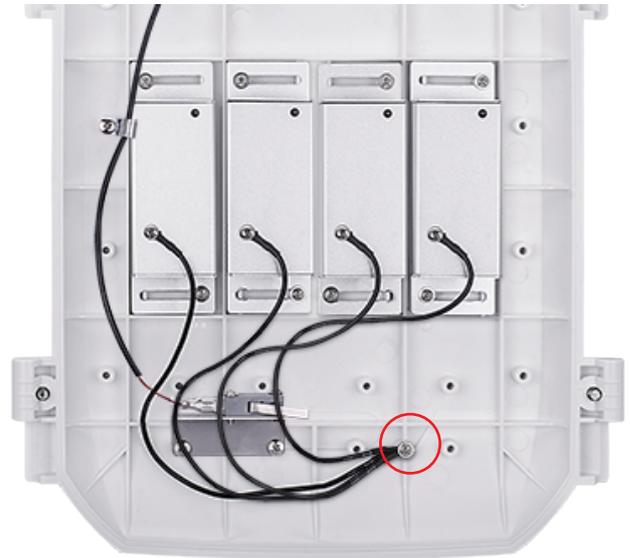

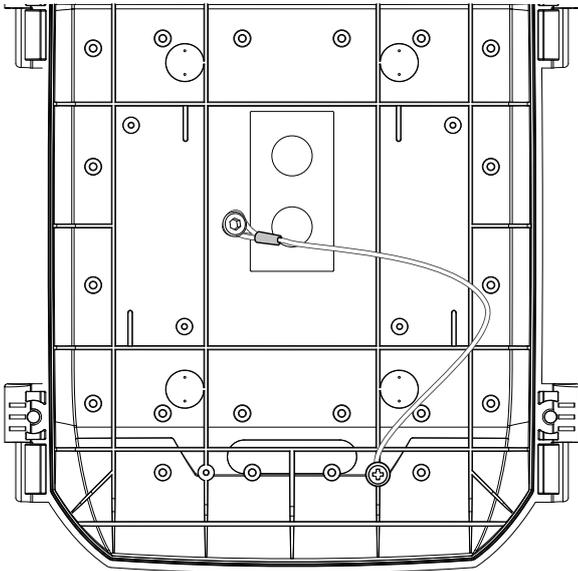

Make sure all waterproof cable glands have been properly installed. Water leakage will cause irreparable damage to the camera.

OPTIONAL: If using VIVOTEK's outdoor cabinet.

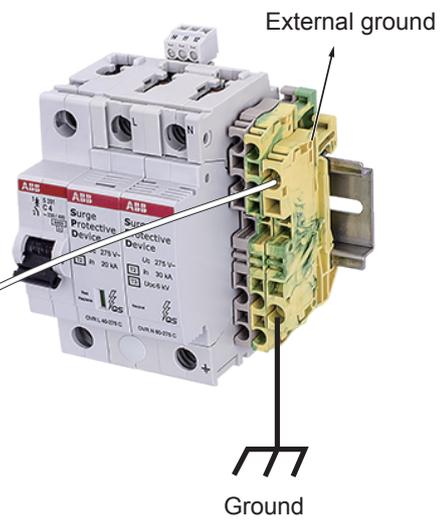

Connect the ground wire to the copper screw hole on the cabinet door.

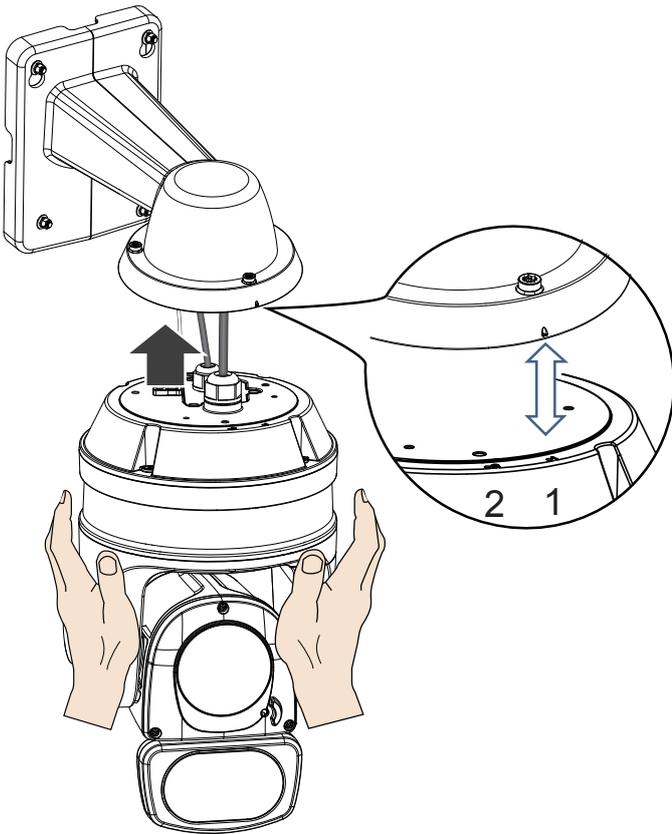

Connect all ground wires (including those from the surge protectors) to one position on the cabinet door, to the terminal block, and then to the external ground. Several surge protectors are shown in here.

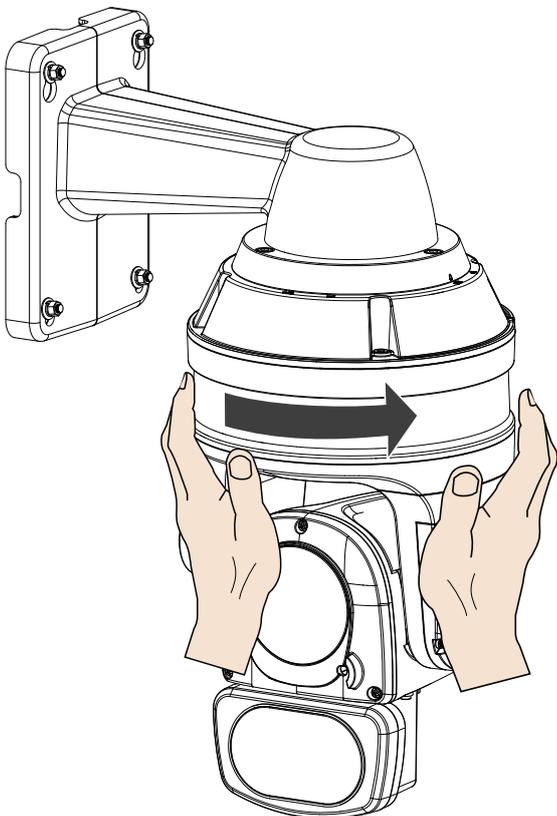

AWG 8

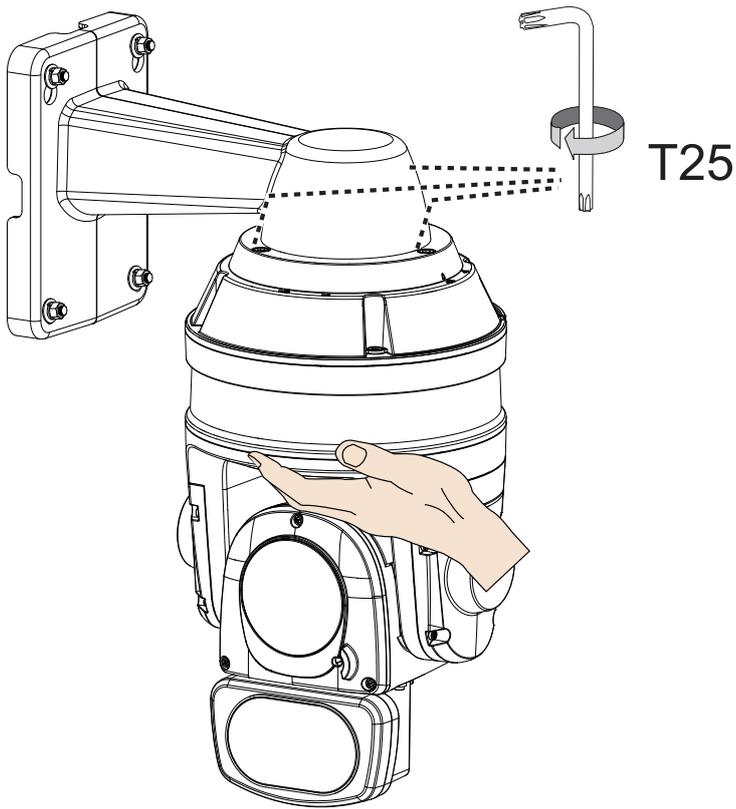

16. Install the camera to bracket by aligning the mark on bracket with the #1 marking on the camera.

17. Turn the camera clockwise. The camera should be locked in place.

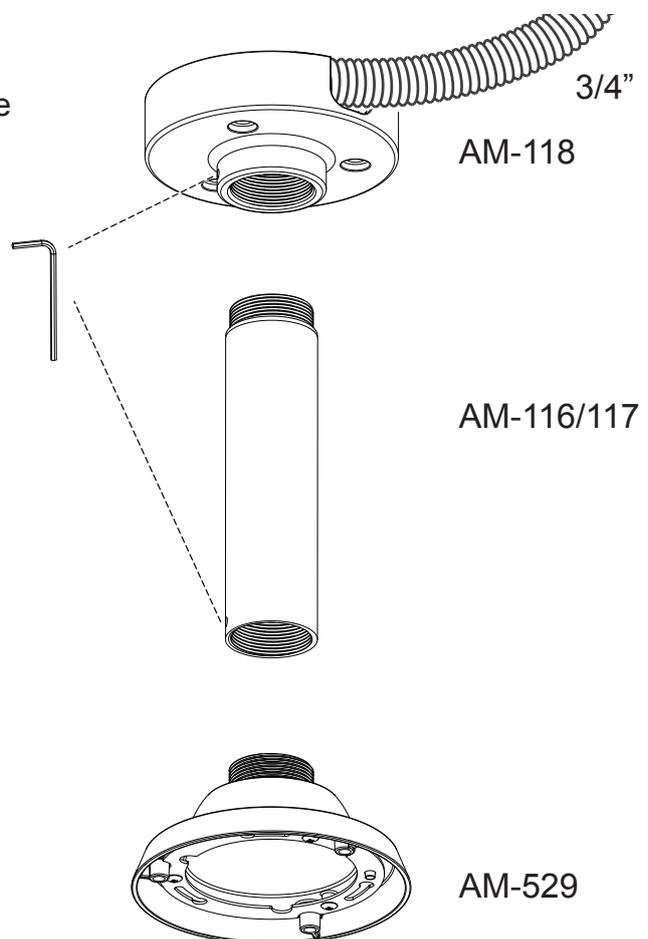

18. Secure the connection using the T25 L-wrench from the top.

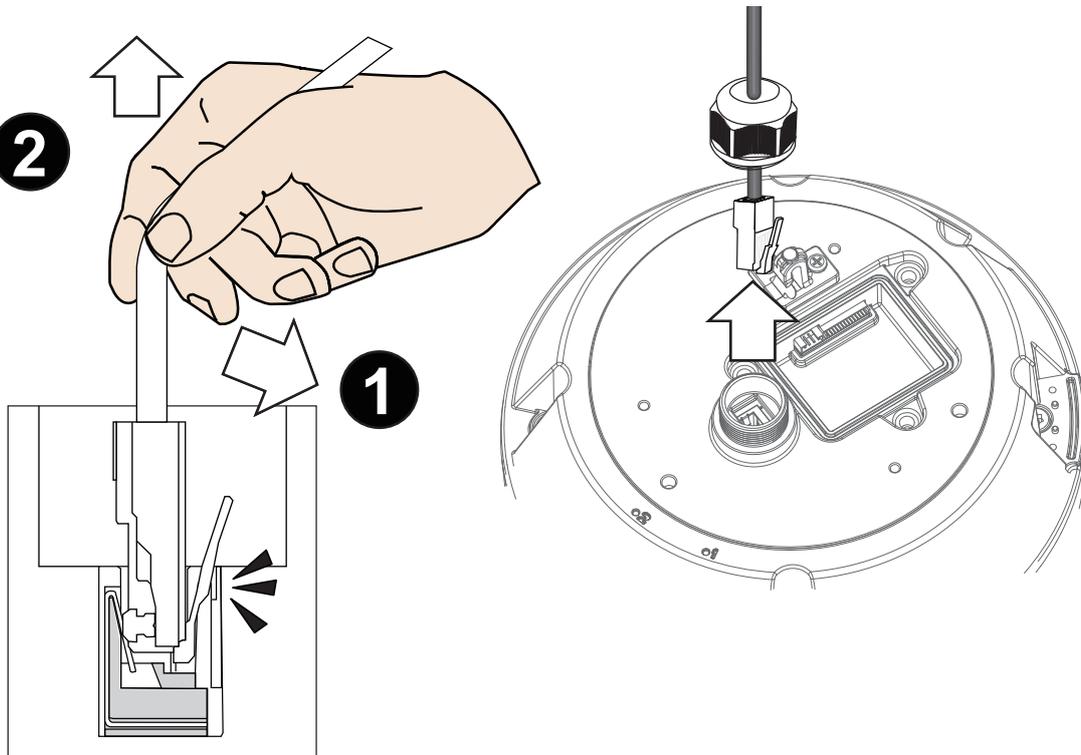

Pendant Mount

The camera can also be mounted through a pendant mount combination as shown below. The rest of the installation procedure is the same as described above.

 **Tips:**

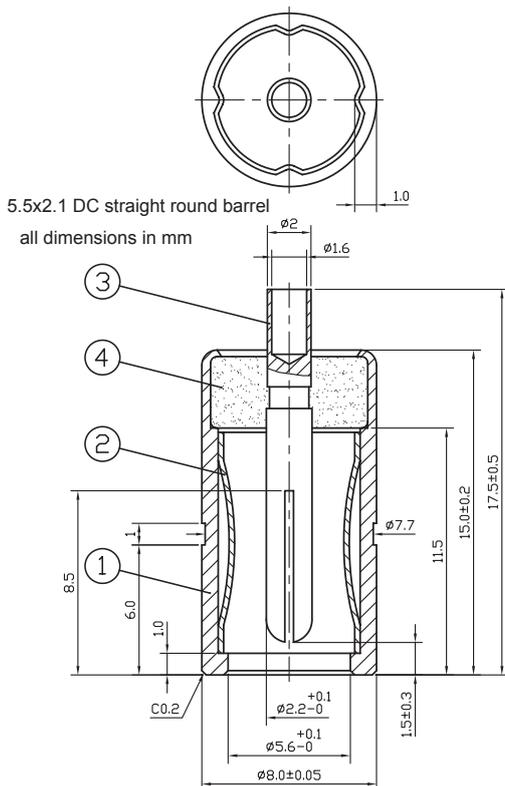

To disconnect a LAN cable, loosen the cable gland and pull the cable against the socket wall towards the side of the locking tab.

I/O Combo Cable Specifications

FM 0316

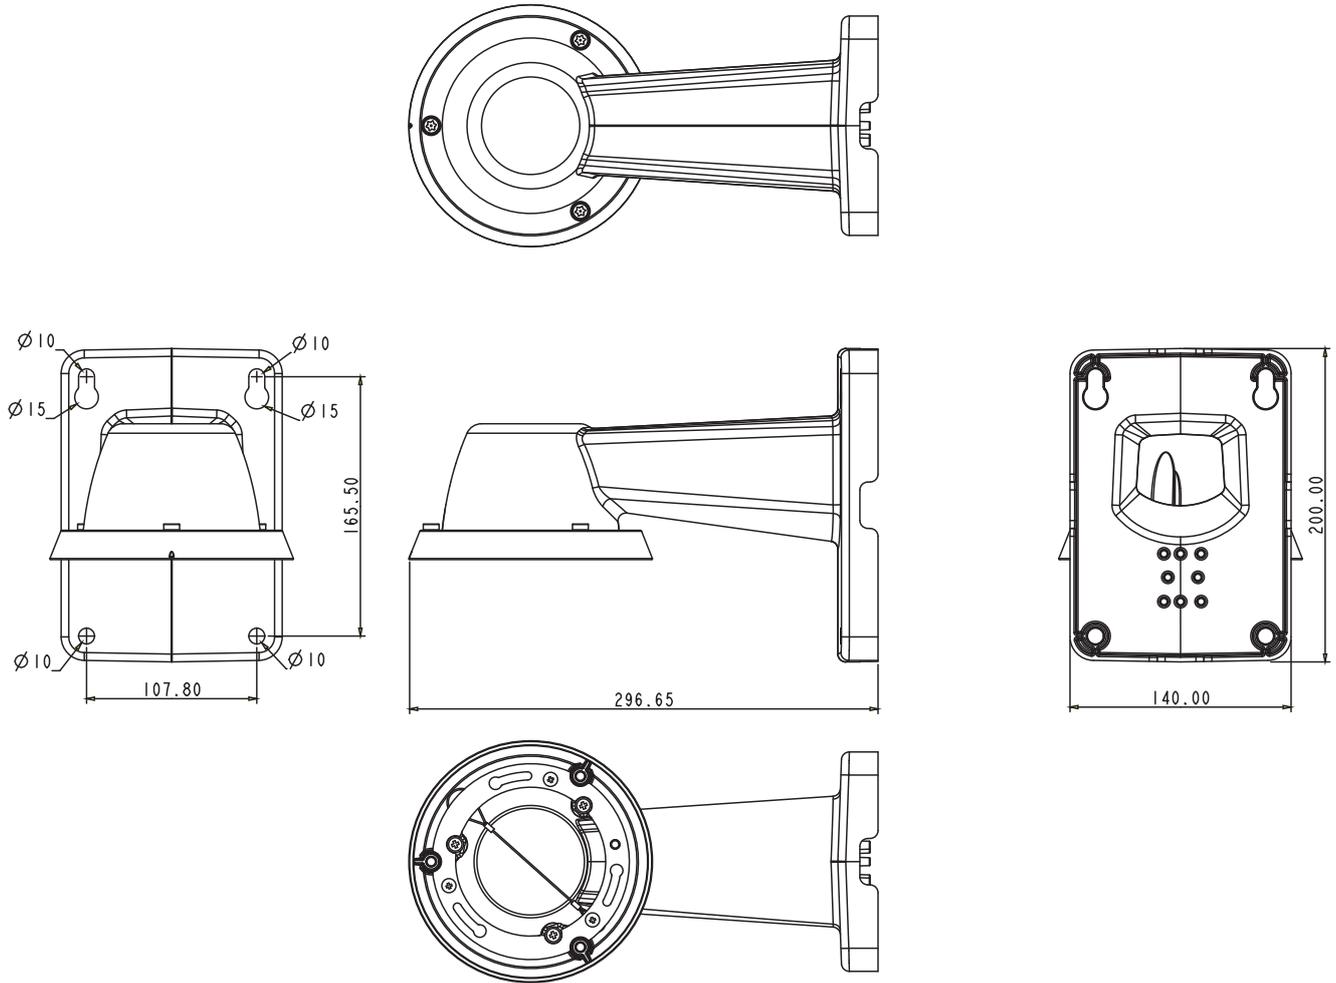

The 24V DC socket dimensions are shown on the left. The DC socket should comply with a DC jack of the following parameters:

Connector: Straight Round Barrel
Pin Size /DC Plug dimensions: 2.1 x 5.5 x 10 mm (AxBxC)

A Inner diameter - 2.1mm
B Outer diameter - 5.5mm
C Length - 10 mm

Mechanical Dimensions

Shown below are the dimensions of the wall mount bracket and its mounting holes:

You can find the installation instructions on VIVOTEK's website for other options such as parapet mount: <http://www.vivotek.com/web/product/accessories.aspx>

NOTE:

1. The camera is only to be connected to PoE networks without routing to outside plants.
 2. For PoE connection, use only UL listed I.T.E. with PoE output.
-
1. La caméra ne doit être raccordée qu'à des réseaux PoE, sans routage vers des installations extérieures.
 2. Pour les raccordements PoE, utilisez uniquement un équipement de TI homologué UL, avec une sortie PoE.

Network Deployment

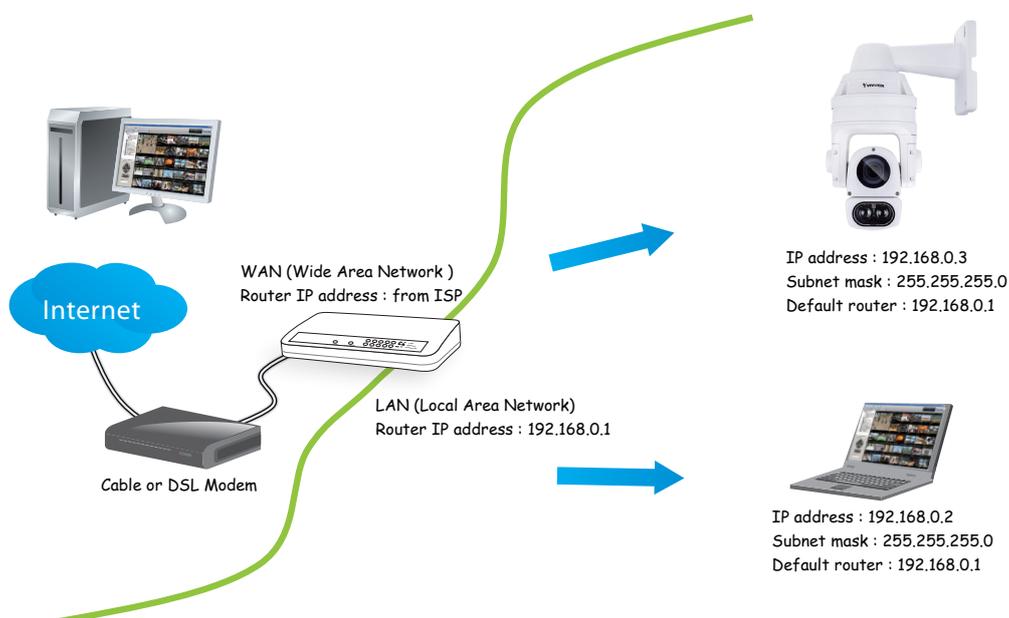

Setting up the Network Camera over the Internet

There are several ways to set up the Network Camera over the Internet. The first way is to set up the Network Camera behind a router. The second way is to utilize a static IP. The third way is to use PPPoE.

Internet connection via a router

Before setting up the Network Camera over the Internet, make sure you have a router and follow the steps below.

1. Connect your Network Camera behind a router, the Internet environment is illustrated below. Regarding how to obtain your IP address, please refer to Software Installation on page 26 for details.

2. In this case, if the Local Area Network (LAN) IP address of your Network Camera is 192.168.0.3, please forward the following ports for the Network Camera on the router.

- Secondary HTTP port: 8080
- RTSP port: 554
- RTP port for audio: 5558
- RTCP port for audio: 5559
- RTP port for video: 5556
- RTCP port for video: 5557

If you have changed the port numbers on the Network page, please open the ports accordingly on your router. For information on how to forward ports on the router, please refer to your router's user's manual.

3. Find out the public IP address of your router provided by your ISP (Internet Service Provider). Use the public IP and the secondary HTTP port to access the Network Camera from the

Internet. Please refer to Network Type on page 80 for details.

For example, your router and IP settings may look like this:

Device	IP Address: internal port	IP Address: External Port (Mapped port on the router)
Public IP of router	122.146.57.120	
LAN IP of router	192.168.2.1	
Camera 1	192.168.2.10:80	122.146.57.120:8000
Camera 2	192.168.2.11:80	122.146.57.120:8001
...

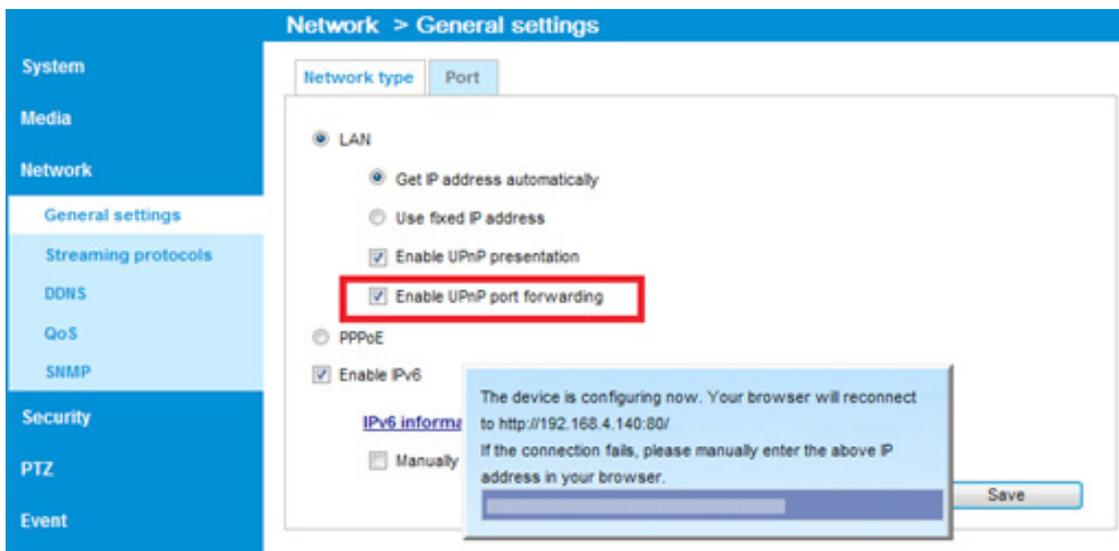

Configure the router, virtual server or firewall, so that the router can forward any data coming into a preconfigured port number to a network camera on the private network, and allow data from the camera to be transmitted to the outside of the network over the same path.

From	Forward to
122.146.57.120:8000	192.168.2.10:80
122.146.57.120:8001	192.168.2.11:80
...	...

When properly configured, you can access a camera behind the router using the HTTP request as follows: `http://122.146.57.120:8000`

If you change the port numbers on the Network configuration page, please open the ports accordingly on your router. For example, you can open a management session with your router to configure access through the router to the camera within your local network. Please consult your network administrator for router configuration if you have troubles with the configuration.

For more information with network configuration options (such as that of streaming ports), please refer to Configuration > Network Settings. VIVOTEK also provides the automatic port forwarding feature as an NAT traversal function with the precondition that your router must support the UPnP port forwarding feature.

Internet connection with static IP

Choose this connection type if you are required to use a static IP for the Network Camera. Please refer to LAN on page 80 for details.

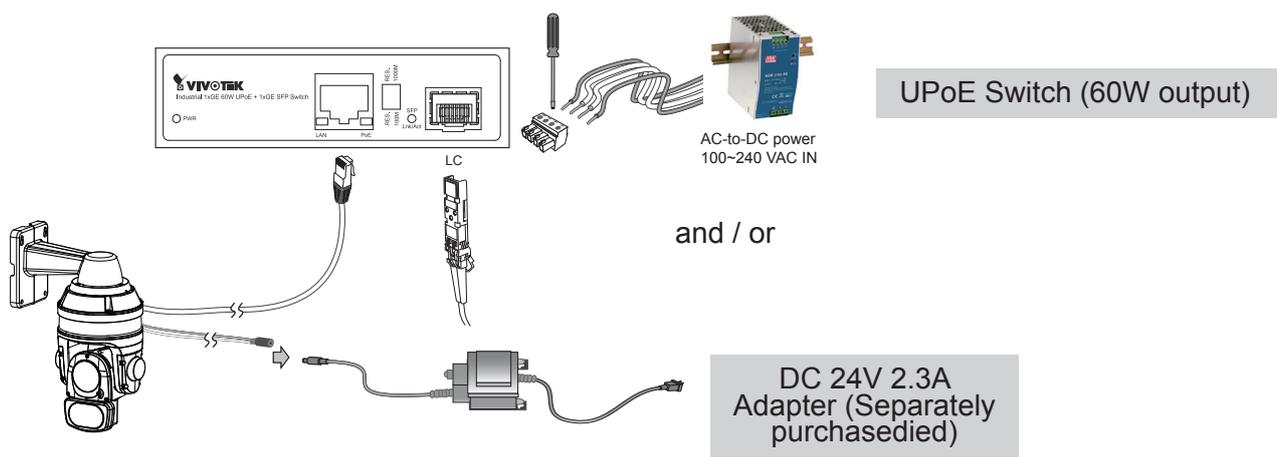

Internet connection via PPPoE (Point-to-Point over Ethernet)

Choose this connection type if you are connected to the Internet via a DSL Line. Please refer to PPPoE on page 81 for details.

General Connection

1. Connect the Network Camera's Ethernet cable (CAT5e) to a PoE Plus switch. A 30W PoE output port alone can not drive the onboard heater, and hence if using the PoE switch alone, the application does not apply in low-temperature condition. When working under a temperature lower than -10°C, a DC 24V 2.3A power adapter is required.
2. Connect the power wires to a DC 24V power adaptor (user-supplied). The DC 24V adapter can drive the camera and the onboard heater.

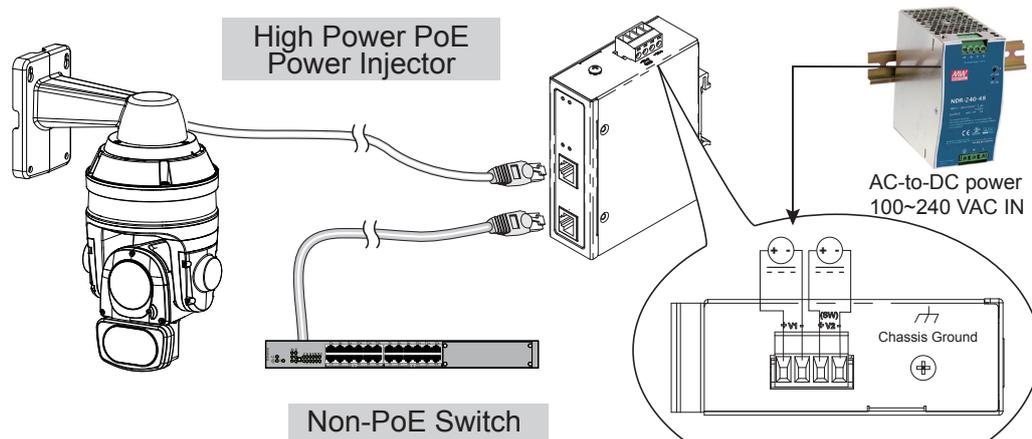

You can connect both power sources for redundancy in power supply.

Power over Ethernet (High Power PoE)

When using a non-PoE switch

Use a High Power PoE power injector (separately purchased) capable of 60W output or higher to connect between the Network Camera and a non-PoE switch. Sufficient power is required for low temperature conditions when the onboard heater is activated.

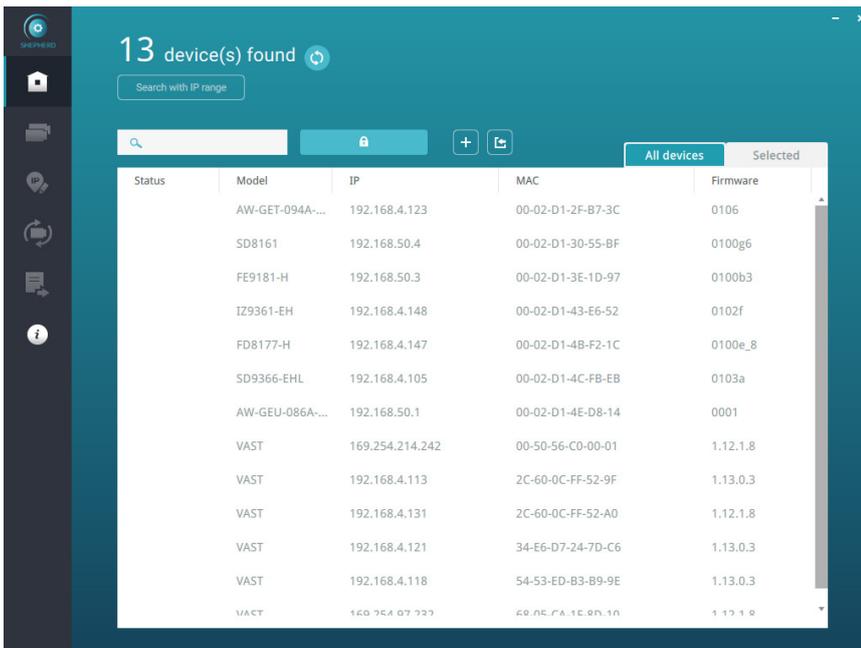

Software Installation

19. Install the **Shepherd** utility, which helps you locate and configure your Network Camera in the local network. If your camera comes without the CD, go to VIVOTEK's website, and locate the utility in the Downloads > Software page.

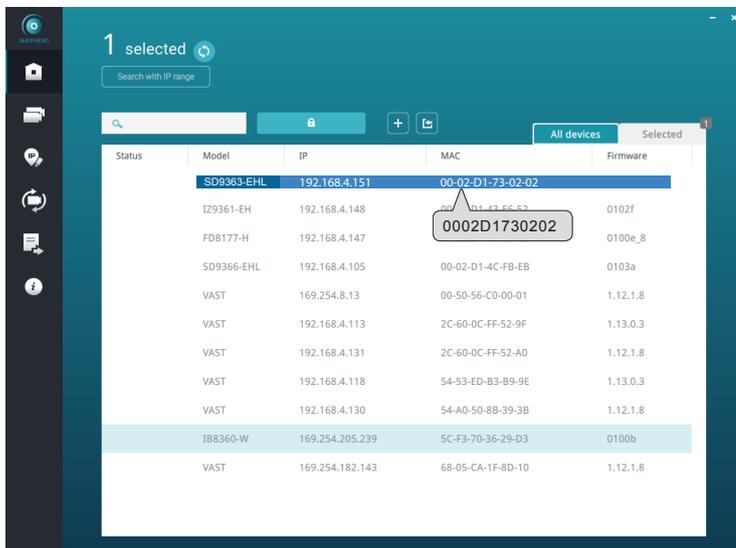

19-1. Run the Shepherd utility.

19-2. The program will conduct an analysis of your network environment.

19-3. The program will search for all VIVOTEK network devices on the same LAN.

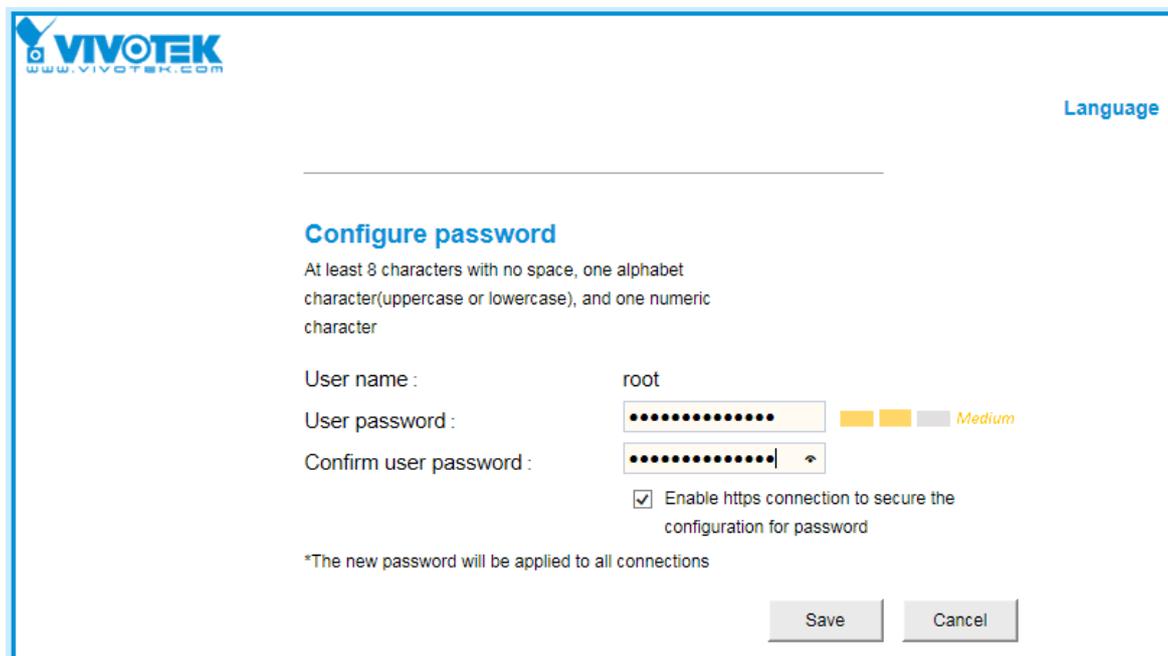

19-4. After a brief search, the installer window will prompt. Click on the MAC and model name that matches the one printed on the product label. You can then double-click on the address to open a management session with the Network Camera.

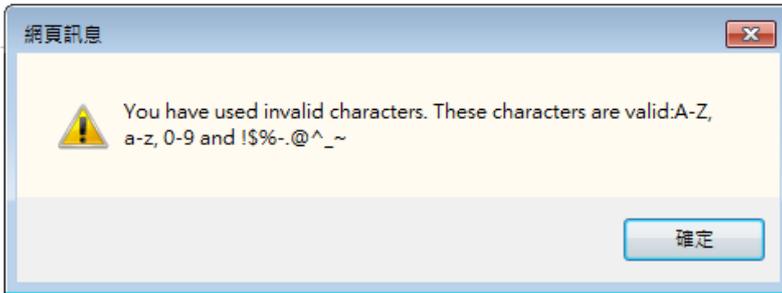

Forceful Password Configuration

20. The first time you log in to the camera, the firmware will prompt for a password configuration for security concerns.

20-1. Enter the combination of alphabetic and numeric characters to fulfill the password strength requirement. The default name for the camera administrator is “root”, and can not be changed.

Some, but not all special ASCII characters are supported: !, \$, %, -, ., @, ^, _, and ~. You can use them in the password combination.

20-2. Another prompt will request for the password you just configured. Enter the password and then you can start configure your camera and see the live view.

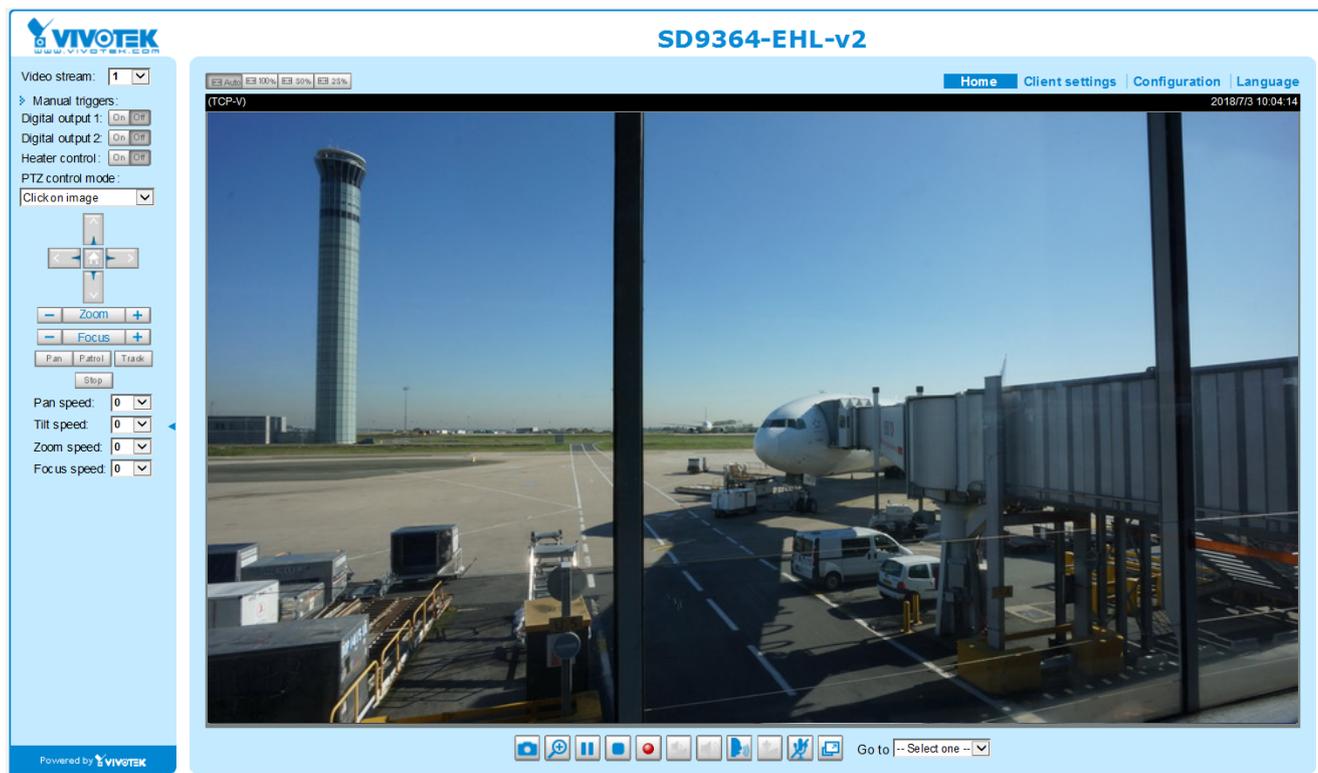

Tips:

1. If you forget the root (administrator) password for the camera, you can restore the camera defaults by pressing the reset button for longer than 5 seconds.
2. If DHCP is enabled in your network, and the camera cannot be accessed, run the Shepherd utility to search the network. If the camera has been configured with a fixed IP that does not comply with your local network, you may see its default IP 169.254.x.x. If you still cannot find the camera, you can restore the camera to its factory defaults. The factory default is DHCP client.
3. If you change your network parameters, e.g., added a camera via a connection to a LAN card, re-start the Shepherd utility.

Ready to Use

1. A browser session to the Network Camera should prompt as shown below.
2. You should be able to see live video from your camera. You may also install the 32-channel VAST recording software in a deployment consisting of multiple cameras. For its installation details, please refer to its related documents.

⚠ IMPORTANT:

- Currently the Network Camera utilizes a **32-bit ActiveX plugin**. You **CAN NOT** open a management/view session with the camera using a 64-bit IE browser.
- If you encounter this problem, try execute the `ieexplore.exe` program from `C:\Windows\SysWOW64`. A 32-bit version of IE browser will be installed.
- On Windows 7, the 32-bit explorer browser can be accessed from here: `C:\Program Files (x86)\Internet Explorer\ieexplore.exe`
- If you experience compatibility issues between the plug-in control, you may try to uninstall the Camera Stream Controller located in: `C:/Program Files (x86)/Camera Stream Controller`.

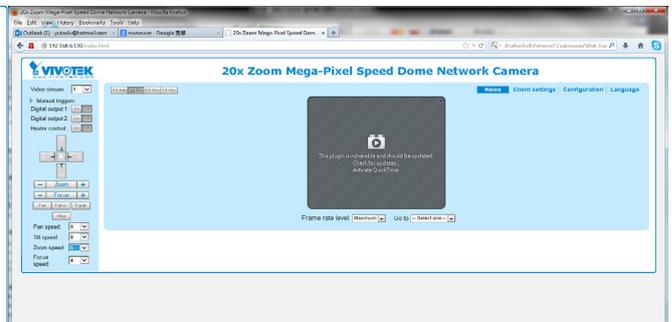

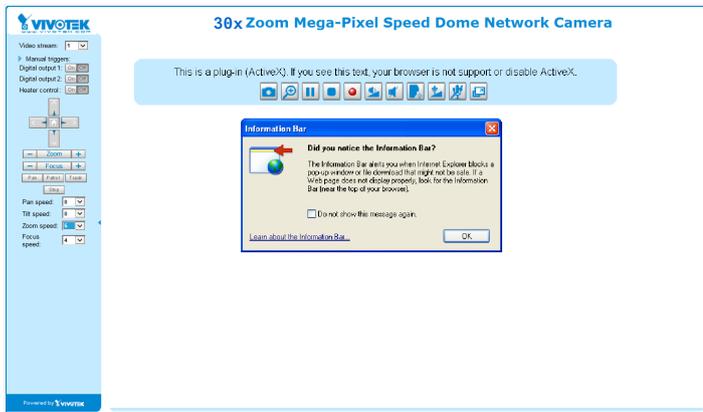

Accessing the Network Camera

This chapter explains how to access the Network Camera through web browsers, RTSP players, 3GPP-compatible mobile devices, and VIVOTEK recording software.

Using Web Browsers

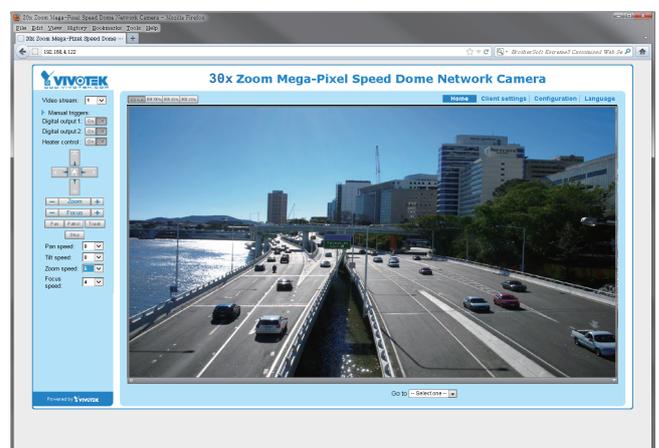

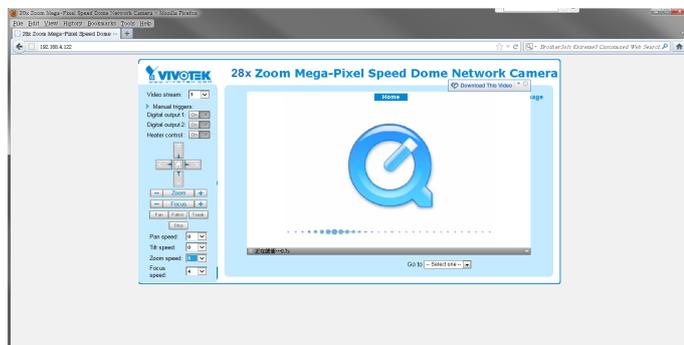

Use the Shepherd software utility to access to the Network Cameras on the LAN. If your network environment is not a LAN, follow these steps to access the Network Camera:

1. Launch your web browser (e.g., Microsoft® Internet Explorer or Mozilla Firefox).
2. Enter the IP address of the Network Camera in the address field. (A temporary IP will be generated for the camera. Find it in your Network Neighborhood). Press **Enter**.
3. Live video will display in your web browser.
4. If it is the first time installing the VIVOTEK network camera, an information bar will pop up as shown below. Follow the instructions to install the required plug-in on your computer.

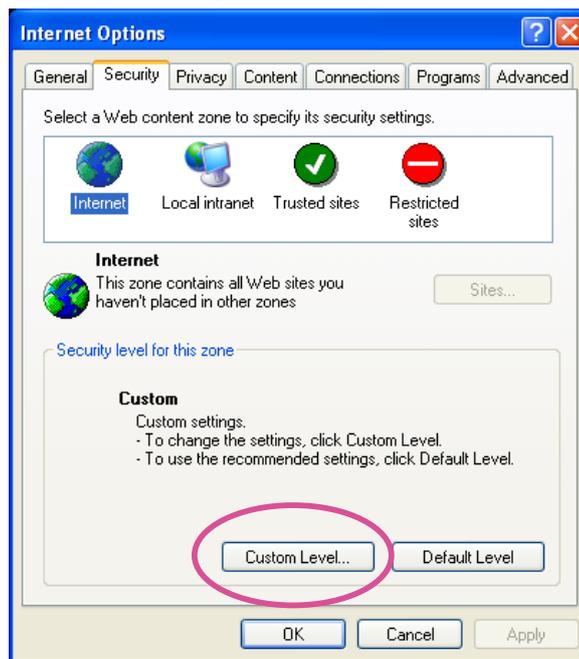

NOTE:

For Mozilla **Firefox** or **Netscape** users, your browser will use **QuickTime** to stream live video. If you do not have QuickTime on your computer, please download QuickTime from Apple Inc's website, and then launch your web browser.

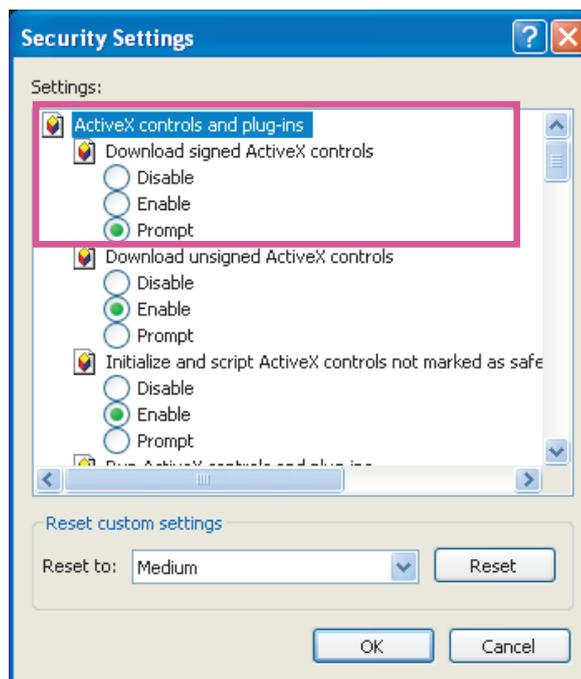

- ▶ *By default, the Network Camera is not password-protected. To prevent unauthorized access, it is highly recommended to set a password for the Network Camera. For more information about how to enable password protection, please refer to Security on page 100.*
- ▶ *If you see a dialog box indicating that your security settings prohibit running ActiveX® Controls, please enable the ActiveX® Controls for your browser.*

1. Choose *Tools > Internet Options > Security > Custom Level.*

2. Look for *Download signed ActiveX® controls*; select *Enable or Prompt*. Click **OK**.

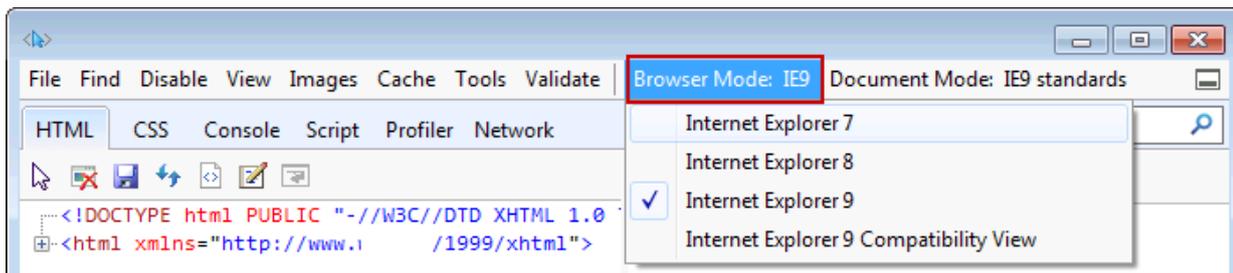

3. Refresh your web browser, then install the ActiveX® control. Follow the instructions to complete installation.

Tips:

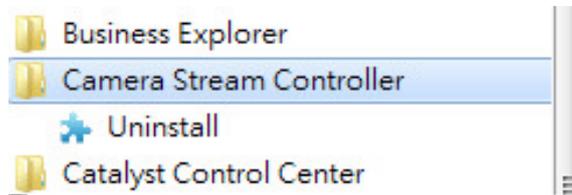

1. The onscreen Java control can malfunction under the following situations: A PC connects to different cameras that are using the same IP address (or the same camera running different firmware versions). Removing your browser cookies will solve this problem.
2. If you encounter problems with displaying the configuration menus or UI items, try disable the Compatibility View on IE8 or IE9.

You may also press the F12 key to open the developer tools utility, and then change the Browser Mode to the genuine IE8 or IE9 mode.

- In the event of plug-in compatibility issues, you may try to uninstall the plug-in that was previously installed.

Using RTSP Players

To view the H.265/H.264 streaming media using RTSP players, you can use one of the following players that support RTSP streaming.

Quick Time Player

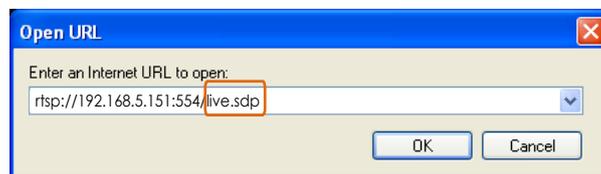

VLC Media Player

1. Launch the RTSP player.
2. Choose File > Open URL. An URL dialog box will pop up.
3. The address format is `rtsp://<ip address>:<rtsp port>/<RTSP streaming access name for stream1 or stream2>`

As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 88.

For example:

4. The live video will be displayed in your player.
For more information on how to configure the RTSP access name, please refer to RTSP Streaming on page 88 for details.

Using 3GPP-compatible Mobile Devices

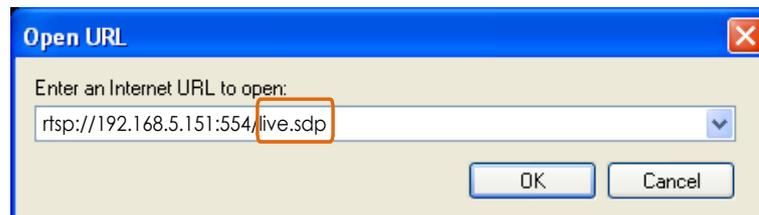

To view the streaming media through 3GPP-compatible mobile devices, make sure the Network Camera can be accessed over the Internet. For more information on how to set up the Network Camera over the Internet, please refer to Setup the Network Camera over the Internet on page 23.

To utilize this feature, please check the following settings on your Network Camera:

1. Because most players on 3GPP mobile phones do not support RTSP authentication, make sure the authentication mode of RTSP streaming is set to disable.
For more information, please refer to RTSP Streaming on page 88.
2. As the the bandwidth on 3G networks is limited, you will not be able to use a large video size. Please set the video and audio streaming parameters as listed below.
For more information, please refer to Stream settings on page 72.

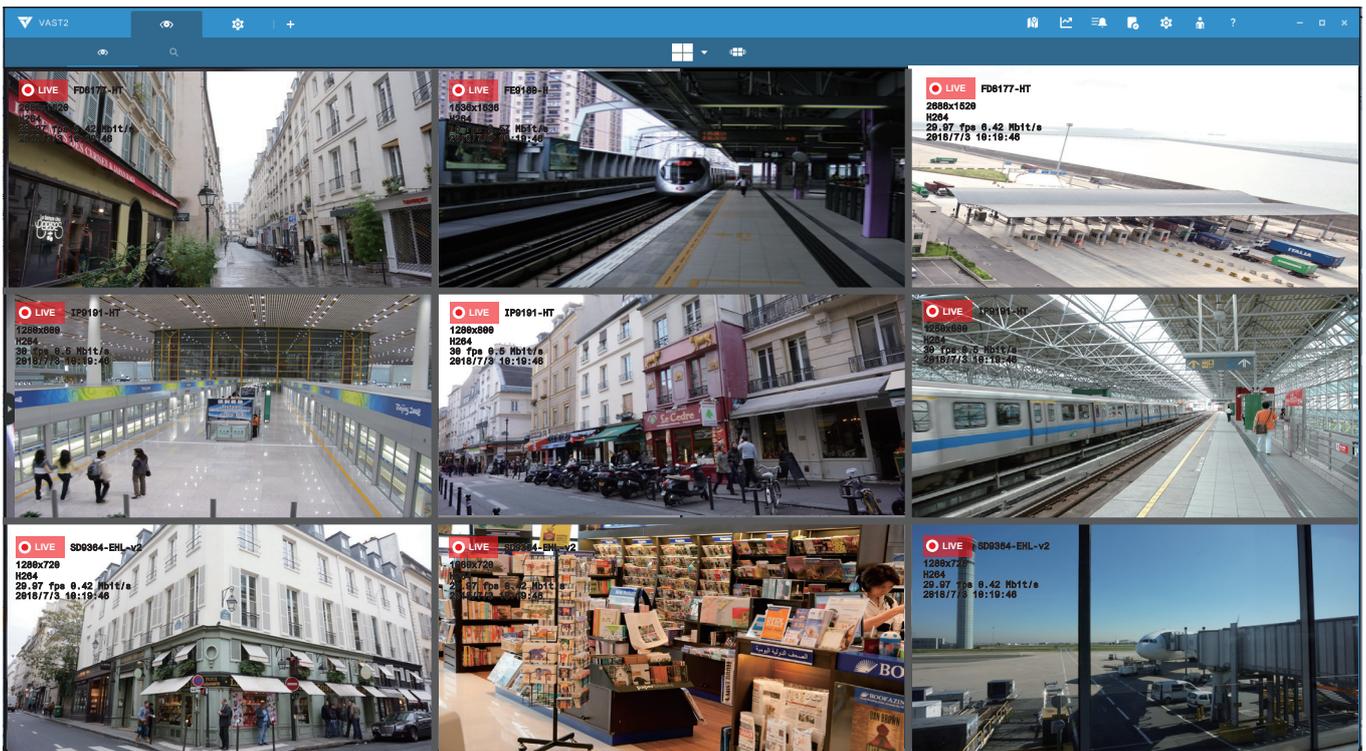

Video Mode	MPEG-4
Frame size	176 x 144
Maximum frame rate	5 fps
Intra frame period	1S
Video quality (Constant bit rate)	40kbps
Audio type (GSM-AMR)	12.2kbps

3. As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 88.
4. Launch the player on the 3GPP-compatible mobile devices (ex. Real Player).
5. Type the following URL commands into the player.
The address format is `rtsp://<public ip address of your camera>:<rtsp port>/<RTSP streaming access name for stream 3>`.
For example:

Using VIVOTEK Recording Software

You can visit VIVOTEK's website for a VAST recording software, allowing simultaneous monitoring and video recording for multiple Network Cameras. Please install the recording software; then launch the program to add the Network Camera to the Channel list. For detailed information about how to use the recording software, please refer to the user's manual of the software or download it from <http://www.vivotek.com>.

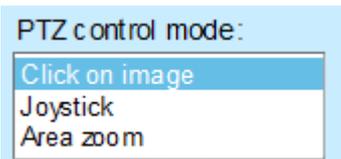

Main Page

This chapter explains the layout of the main page. It is composed of the following sections: VIVOTEK INC. Logo, Host Name, Camera Control Area, Configuration Area, and Live Video Window.

Mouse and Screen Control

PTZ control mode

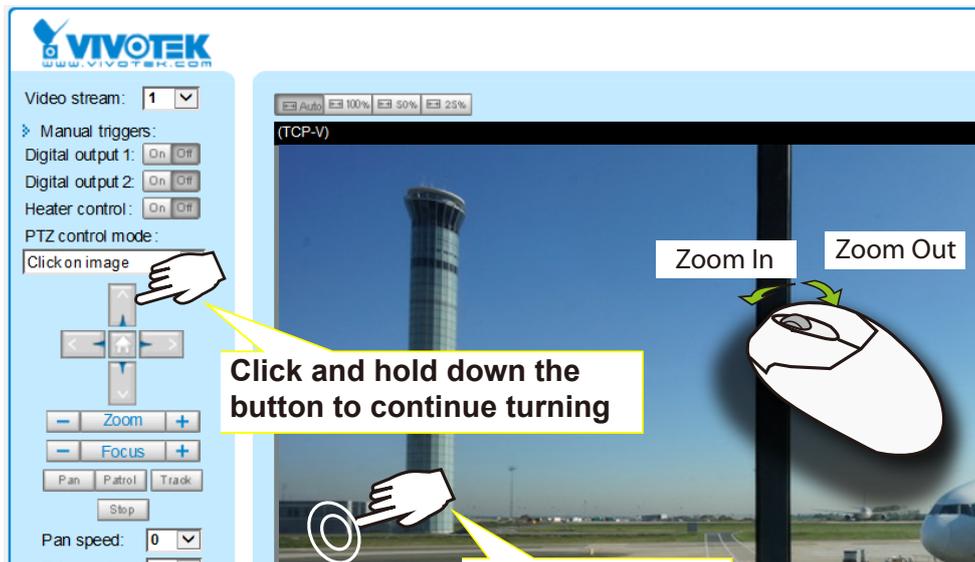

Use the drop-down menu to select a PTZ control mode.

There are two different methodologies with the Click on image: Continuous and Click to move.

The **Continuous move** allows your screen control action to continue as long as you click and hold down the left mouse button. For example, if you click on the left button on the PTZ control panel, the camera's view should continuously rotate to the left until you release the button. The same applies to arrow keys, Zoom, and Focus buttons on the PTZ panel. If you select **Click to move**, every single mouse click takes effect for once without the ensuing move.

1. Click on image

In addition to the use of a joystick, mouse control is also supported by the web session. You can click on any spot on the screen to move camera's field of view to that direction. To pan 360 degrees, you can click and hold down the left mouse button when clicking a PTZ button. The same applies to arrow keys, Zoom, and Focus buttons on the PTZ panel.

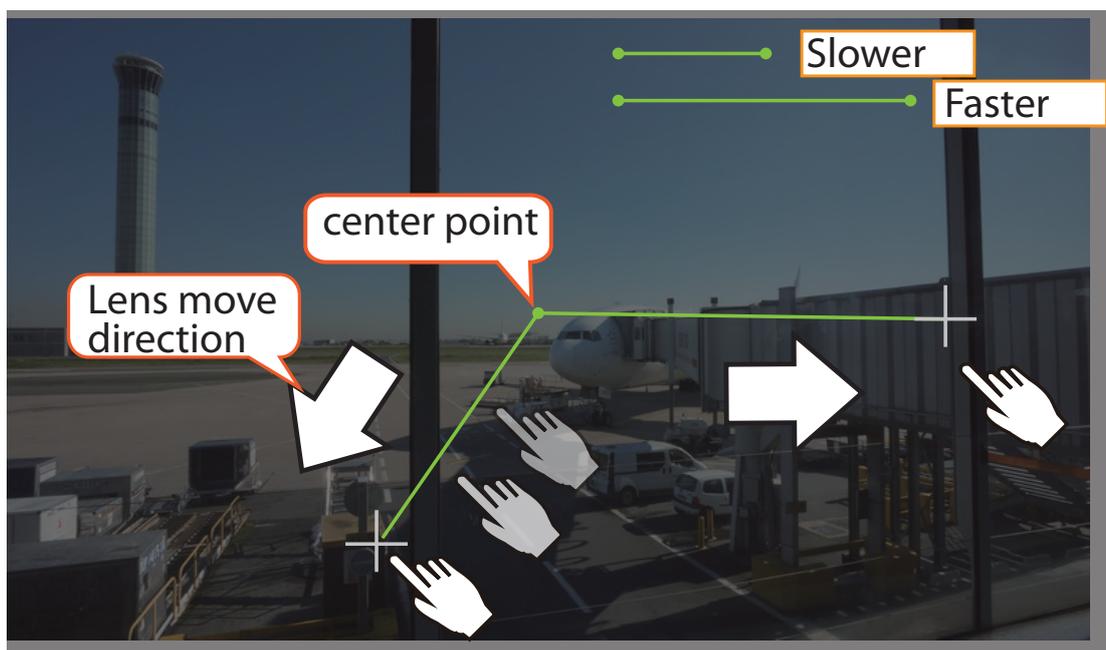

Note that if your screen control malfunctions, it is possible that the CPU of your current view station can not cope with the HD video feeds or that an incompatibility issue occurred with the ActiveX control plug-ins.

2. Joystick mode

The Joystick mode simulates joystick control using your mouse. Click and hold down the left mouse button, and move your mouse target cursor to the direction you want. Drag towards the direction you prefer, the lens will move to that direction. You can click and hold down the mouse button to continue scanning.

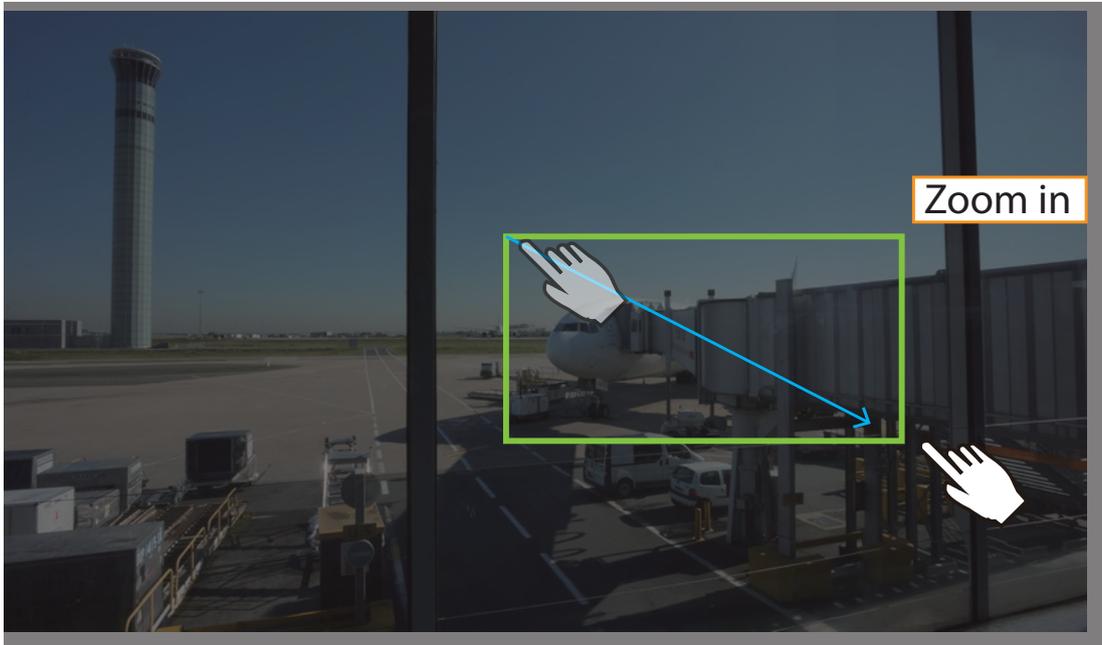

The longer the track you drag away from the center, the faster the lens moves.

3. Area zoom

Click and drag across the screen to draw a rectangle. The camera will zoom in on that area. The smaller the rectangle, the higher the zoom in ratio. The larger the rectangle, the smaller the zoom ratio.

To zoom out or return to the previous field of view, click on the Zoom Out button, Home button, or any of the preset PTZ positions.

VIVOTEK INC. Logo

Click this logo to visit the VIVOTEK website.

Host Name

The host name can be customized to fit your needs. For more information, please refer to System on page 50.

Camera Control Area

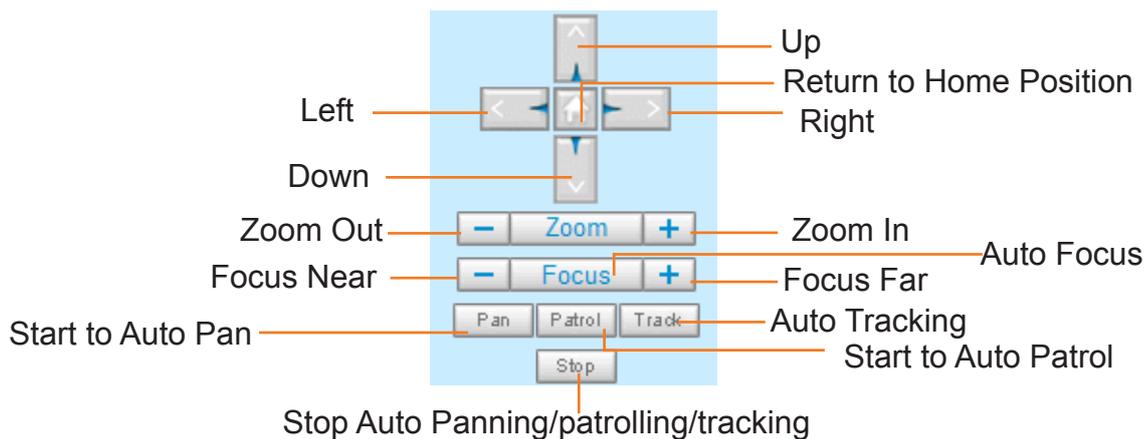

Video Stream: This Network Camera supports multiple streams (stream 1 ~ 4) simultaneously. You can select either one for live viewing. For more information about multiple streams, please refer to page 71 for detailed information.

Manual triggers: Manual triggers can be turned on/off by users from the main page. The manual triggers can be associated with the Event settings, and, as the result, can be used to perform recording actions, sending notifications, and so on. See Event settings on page 123.

Digital Output: Click to turn the digital output device on or off.

Heater control: This allows you to manually turn on or turn off the onboard heater.

PTZ Control Panel:

Pan: Click this button to start the auto pan (360° continuous rotation).

Stop: Click this button to stop the Auto Pan, Auto Patrol, and Auto Tracking functions.

Patrol: Once the Administrator has determined the list of preset positions (including the zoom-in action on a particular position), click this button to command the camera to patrol among those positions on the Patrol List. The Network Camera will patrol continuously. For more information, please refer to PTZ control on page 114.

Track: Allows the camera to move along following the moving objects in the current field of view. If you observe an object of your interest, click this button to track the object. Note that this function does not apply in an extremely crowded area, such as a market or sidewalk full of pedestrian activities. Constant shift of tracked objects will decrease the usability of this feature.

Once started, you can use the Stop button to stop the current action. A click on the screen can also stop the tracking action.

Another key concept is that the camera only detect movements within the current field of view.

Please refer to **PTZ > Auto tracking** on page 121 and further for tracking configuration details.

Pan /Tilt /Zoom /Focus speed: Adjust the speed of Pan/ Tilt/ Zoom/ Focus:

Pan speed	Tilt speed	Zoom speed	Focus speed	
-5	-5	-5	-5	Slower
-4	-4	-4	-4	
-3	-3	-3	-3	
-2	-2	-2	-2	
-1	-1	-1	-1	
0	0	0	0	
1	1	1	1	
2	2	2	2	
3	3	3	3	Faster
4	4	4	4	
5	5	5	5	

Note that mouse screen control is also supported. You can refer to page 114 for related information.

Configuration Area

Client Settings: Click this button to access the client setting page. For more information, please refer to Client Settings on page 44.

Configuration: Click this button to access the configuration page of the Network Camera. It is suggested that a password be applied to the Network Camera so that only the administrator can configure the Network Camera. For more information, please refer to Configuration on page 49.

Language: Click this button to choose a language for the user interface. Language options are available in: English, Deutsch, Español, Français, Italiano, 日本語, Português, 简体中文, and 繁體中文. You can also change a language on the Configuration page; please refer to page 49.

Hide Button

You can click the hide button to hide the control panel or display the control panel.

Resize Buttons

Click the Auto button, the video cell will resize automatically to fit the monitor.
 Click 100% is to display the original homepage size.
 Click 50% is to resize the homepage to 50% of its original size.
 Click 25% is to resize the homepage to 25% of its original size.

Go to

If you have preset PTZ positions, these positions will be available in the Go to menu. Please refer to page 114 for more information.

Live Video Window

- The following window is displayed when the video mode is set to H.265 / H.264:
 H.265/H.264 Protocol and Media Options

Video Title: The video title can be configured. For more information, please refer to Video settings on page 60.

H.265/H.264 Protocol and Media Options: The transmission protocol and media options for H.265 / H.264 video streaming. For further configuration, please refer to Client Settings on page 44.

Time: Display the current time. For further configuration, please refer to Media > Image > General settings on page 60.

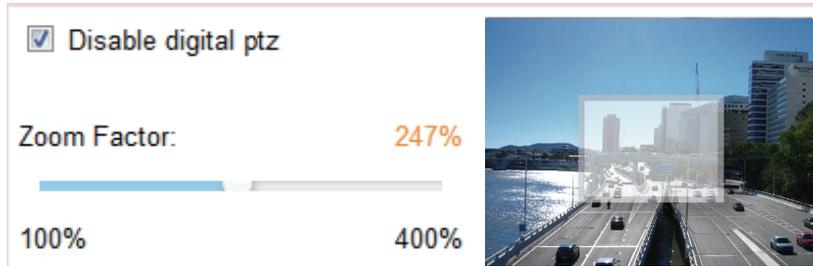

Title and Time: The video title and time can be stamped on the streaming video. For further configuration, please refer to Media > Image > General settings on page 60. The zoom ratio is also displayed with the title bar.

Video and Audio Control Buttons: Depending on the Network Camera model and Network Camera configuration, some buttons may not be available.

 **Snapshot:** Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (*.jpg) or BMP (*.bmp) format.

 **Digital Zoom:** Click and deselect the “Disable digital zoom” to enable the zoom operation. The navigation screen indicates the part of the image being magnified. To control the zoom level, drag the slider bar. To move to a different area you want to magnify, drag the navigation screen.

 **Pause:** Pause the transmission of the streaming media. The button becomes the  **Resume** button after clicking the Pause button.

 **Stop:** Stop the transmission of the streaming media. Click the  **Resume** button to continue transmission.

 **Start MP4 Recording:** Click this button to record video clips in MP4 file format to your computer. Press the  **Stop MP4 Recording** button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 45 for details.

 **Volume:** When the  **Mute** function is not activated, move the slider bar to adjust the volume on the local computer.

 **Mute:** Turn off the volume on the local computer. The button becomes the  **Audio On** button after clicking the Mute button.

 **Talk:** Click this button to talk to people around the Network Camera. Audio will project from the external speaker connected to the Network Camera. Click this button  again to end talking transmission.

 **Mic Volume:** When the  **Mute** function is not activated, move the slider bar to adjust the microphone volume on the local computer.

 **Mute:** Turn off the  **Mic volume** on the local computer. The button becomes the  **Mic On** button after clicking the Mute button.

 **Full Screen:** Click this button to switch to full screen mode. Press the “Esc” key to switch back to normal mode.

■ The following window is displayed when the video mode is set to MJPEG:

Video Title: The video title can be configured. For more information, please refer to Media > Image on page 60.

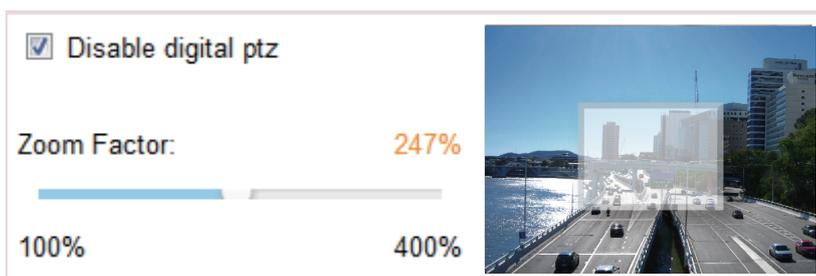

Time: Display the current time. For more information, please refer to Media > Image on page 60.

Title and Time: Video title and time can be stamped on the streaming video. For more information, please refer to Media > Image on page 60.

Video and Audio Control Buttons: Depending on the Network Camera model and Network Camera configuration, some buttons may not be available.

 **Snapshot:** Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (*.jpg) or BMP (*.bmp) format.

 **Digital Zoom:** Click and uncheck “Disable digital zoom” to enable the zoom operation. The navigation screen indicates the part of the image being magnified. To control the zoom level, drag the slider bar. To move to a different area you want to magnify, drag the navigation screen.

 **Start MP4 Recording:** Click this button to record video clips in MP4 file format to your computer. Press the  **Stop MP4 Recording** button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 45 for details.

 **Full Screen:** Click this button to switch to full screen mode. Press the “Esc” key to switch back to normal mode.

Client Settings

This chapter explains how to select the stream transmission mode and saving options on the local computer. When completed with the settings on this page, click **Save** on the page bottom to enable the settings.

H.265/H.264 Media Options

H.265/H.264 media options

Video and audio

Select to stream video or audio data or both. This is enabled only when the video mode is set to H.264 or H.265.

H.265/H.264 Protocol Options

H.265/H.264 protocol options

TCP

Depending on your network environment, there are four transmission modes of H.265 or H.264 streaming:

UDP unicast: This protocol allows for more real-time audio and video streams. However, network packets may be lost due to network burst traffic and images may be broken. Activate UDP connection when occasions require time-sensitive responses and the video quality is less important. Note that each unicast client connecting to the server takes up additional bandwidth and the Network Camera allows up to ten simultaneous accesses.

UDP multicast: This protocol allows multicast-enabled routers to forward network packets to all clients requesting streaming media. This helps reduce the network transmission load of the Network Camera while serving multiple clients at the same time. Note that to utilize this feature, the Network Camera must be configured to enable multicast streaming at the same time. For more information, please refer to RTSP Streaming on page 89.

TCP: This protocol guarantees the complete delivery of streaming data and thus provides better video quality. The downside of this protocol is that its real-time effect is not as good as that of the UDP protocol.

HTTP: This protocol allows the same quality as TCP protocol without needing to open specific ports for streaming under some network environments. Users inside a firewall can utilize this protocol to allow streaming data through.

Two way audio

Two way audio

Half-duplex

Half duplex: Audio is transmitted from one direction at a time, e.g., from a PC holding a web console with the camera.

Full duplex: Audio is transmitted in both directions simultaneously.

MP4 Saving Options

MP4 saving options

Folder:

File name prefix:

Add date and time suffix to file name

Users can record live video as they are watching it by clicking the  button - Start MP4 Recording - on the main page. Here, you can specify the storage destination and file name.

Folder: Specify a storage destination for the recorded video files.

File name prefix: Enter the text that will be appended to the front of the video file name.

Add date and time suffix to the file name: Select this option to append the date and time to the end of the file name of the recorded videos.

Local Streaming Buffer Time

Local Streaming Buffer Time

Millisecond

In a busy network, fluctuations in available bandwidth can occur. Video streaming may lag and may not proceed very smoothly. If you enable this option, video streams from the camera will be temporarily stored on the computer's cache memory for a configurable period of time (seconds or milliseconds) before being played on a web session. This will help you see the streaming more smoothly. If you enter 3,000 Millisecond, the streaming will delay for 3 seconds.

Joystick Settings

Joystick settings

Selected joystick: CH PRODUCTS IP DESKTOP CONTROLLER ▾

Calibrate Configure buttons

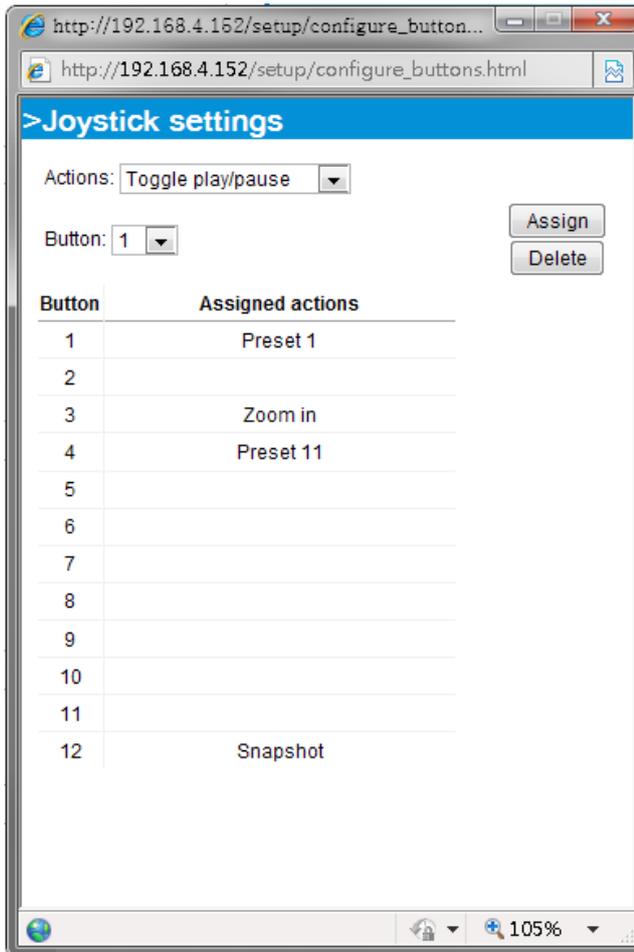

Save

Enable Joystick

Connect to the USB plug of the joystick to a USB port on your management computer. Once a USB joystick is connected, the related joystick configuration will be available on the Client settings window. The joystick should work properly without installing any other driver or software.

Then you can begin to configure the joystick settings of connected devices. Please follow the instructions below to enable joystick settings.

1. Click on the Configure buttons button. If your joystick is working properly, it will be displayed on the drop-down list.

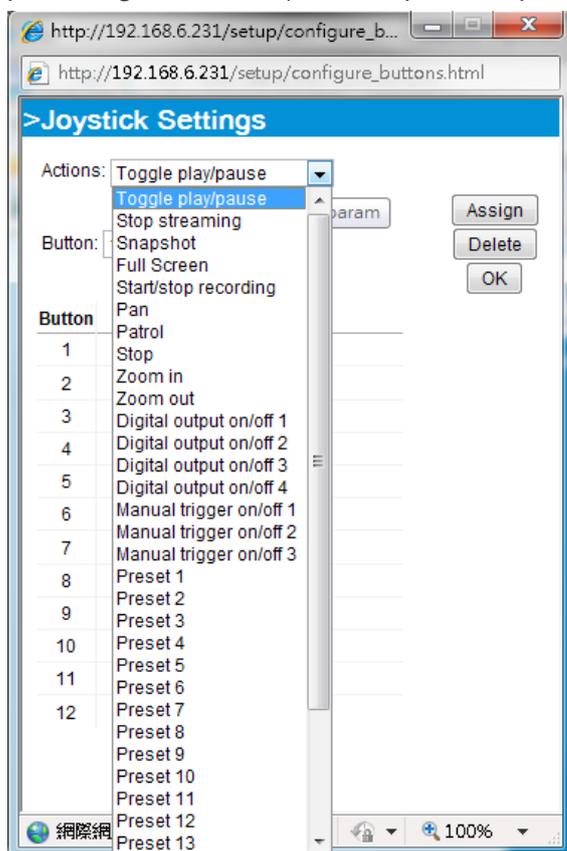

Buttons Configuration

In the Joystick Settings window, you can use the combinations of pull-down menus, Actions and Button number, to assign joystick buttons with different functions. The number of buttons may differ from the joystick you attached.

Please follow the steps below to configure your joystick buttons:

1. Select the number of the button you want to configure from its pull-down list.

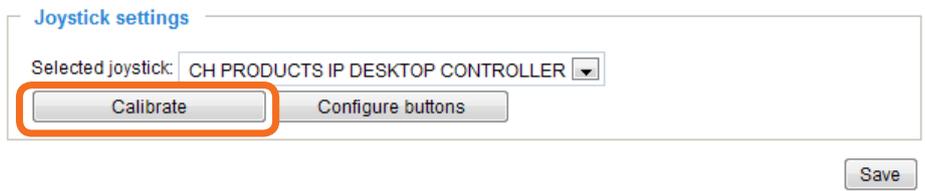

For example: Assign **Preset 1** (move to preset 1 position) to Button 1.

2. Select an action from the Actions menu. Click **Assign** to associate the button with an action.
3. Your configuration will be automatically saved.
4. To disable an assignment, select the number of a button, and then click the Delete button. The associated action will then be cleared.
5. Repeat the above process to assign actions to other buttons. When done, simply close the configuration window.

 **NOTE:**

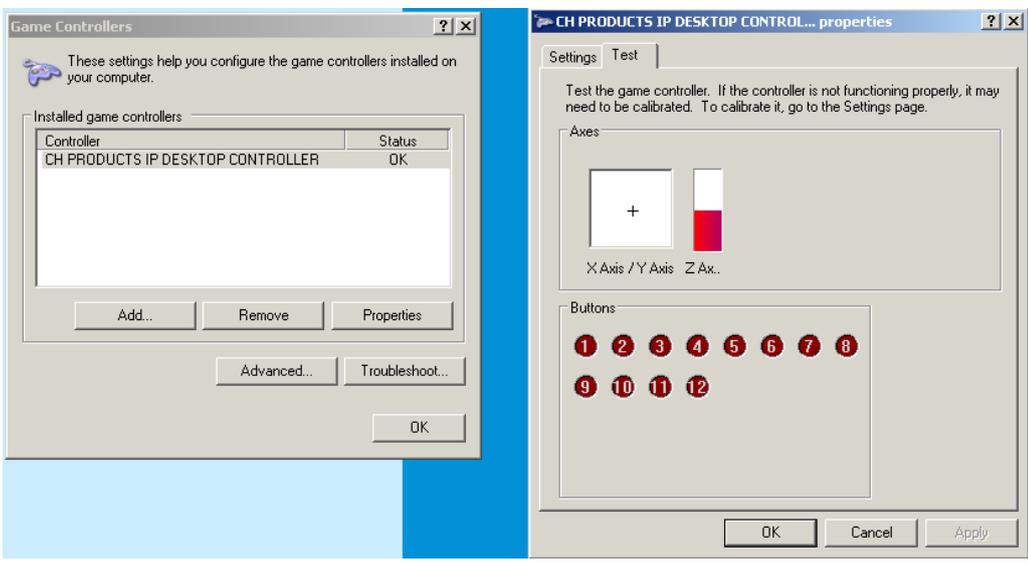

- If you want to assign Preset actions to your joystick, the PTZ preset locations should be configured in advance.
- If your joystick is not working properly, it may need to be calibrated. Click the Calibrate button to open the Game Controllers window located in Microsoft Windows control panel and follow the instructions for trouble shooting.

- The joystick will appear in the Game Controllers list in the Windows Control panel. If you want to check out for your devices, go to the following page: **Start -> Control Panel -> Game Controllers**.

- Follow the onscreen instructions to calibrate your joystick.

Configuration

Click **Configuration** on the main page to enter the camera setting pages. Note that only Administrators can access the configuration page. Please refer to page 100 Security > User Account for how to configure access rights for different users.

The screenshot shows the VIVOTEK configuration interface. The top navigation bar includes 'Home', 'Client settings', 'Configuration', and 'Language'. The left sidebar lists various configuration categories: System (General settings, Homepage layout, Logs, Parameters, Maintenance), Media, Network, Security, PTZ, Event, Applications, Recording, and Local storage. The main content area is titled 'System > General settings' and contains two sections: 'System' and 'System time'. The 'System' section has a 'Host name' field (SD9361-EH) and a checkbox for 'Turn off the LED indicator'. The 'System time' section has a 'Time zone' dropdown menu (set to GMT+08:00) and radio buttons for 'Keep current date and time', 'Synchronize with computer time', 'Manual', and 'Automatic'. A yellow note box states: 'Note: You can upload your daylight saving time rules on Maintenance page or use the camera default value.' A 'Save' button is located at the bottom right. At the bottom left, the 'Firmware Version' is displayed as 'Version: D100e'.

Each function on the configuration list will be explained in the following sections.

Navigation Area provides an instant switch among **Home** page (the monitoring page for live viewing), **Configuration** page, and multi-language selection.

System > General settings

This section explains how to configure the basic settings for the Network Camera, such as the host name and system time. It is composed of the following two columns: System and System Time.

System

System

Host name:

Turn off the LED indicator

Host name: Enter a desired name for the Network Camera. The text will be displayed at the top of the main page.

System time

System time

Time zone:

Note: You can upload your daylight saving time rules on [Maintenance](#) page or use the camera default value.

Keep current date and time

Synchronize with computer time

Manual

Automatic

Keep current date and time: Select this option to preserve the current date and time of the Network Camera. The Network Camera's internal real-time clock maintains the date and time even when the power of the system is turned off.

Synchronize with computer time: Select this option to synchronize the date and time of the Network Camera with the local computer. The read-only date and time of the PC is displayed as updated.

Manual: The administrator can enter the date and time manually. Note that the date and time format are [yyyy/mm/dd] and [hh:mm:ss].

Automatic: The Network Time Protocol is a protocol which synchronizes computer clocks by periodically querying an NTP Server.

NTP server: Assign the IP address or domain name of an established time server. Leaving the text box blank connects the Network Camera to the default time servers. The precondition is that your camera must have access to the Internet.

Update interval: Select to update the time using the NTP server on an hourly, daily, weekly, or monthly basis.

Time zone : Select the appropriate time zone from the list. If you want to upload Daylight Savings Time rules, please refer to **System > Maintenance > Import/ Export files** on page 57 for details.

When finished with the settings on this page, click **Save** at the bottom of the page to enable the settings.

System > Homepage layout

This section explains how to set up your own customized homepage layout.

General settings

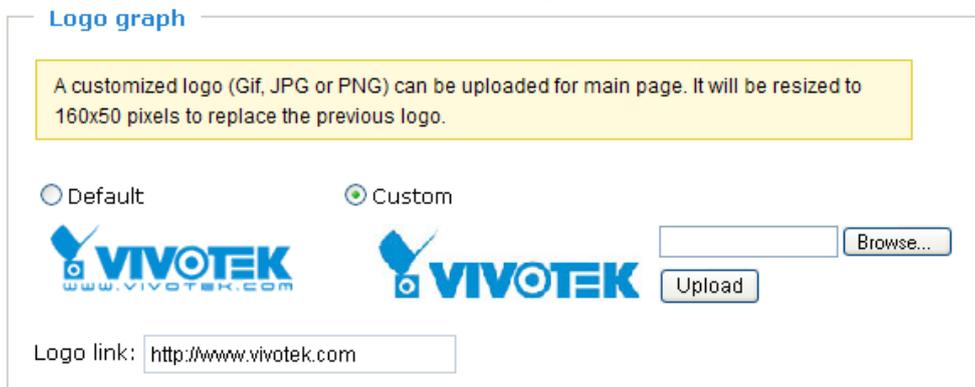

This column shows the settings of your homepage layout. You can manually select the background and font colors in Theme Options (the second tab on this page). The settings will be displayed automatically in this Preview field. The following shows the homepage using the default settings:

- Hide Powered by VIVOTEK: If you check this item, such wording will be removed from the homepage.

Logo graph

Here you can change the logo at the top of your homepage.

Follow the steps below to upload a new logo:

1. Click **Custom** and the Browse field will appear.
2. Select a logo from your files.
3. Click **Upload** to replace the existing logo with a new one.
4. Enter a website link if necessary.
5. Click **Save** to enable the settings.

Customized button

Deselect the checkbox if you do not need the Manual trigger buttons on the main page.

Theme Options

Here you can change the color of your homepage layout. There are three types of preset patterns for you to choose from. The new layout will simultaneously appear in the **Preview** filed. Click **Save** to enable the settings.

System > Logs

This section explains how to configure the Network Camera to send the system log to the remote server as backup.

Log server settings

Log server settings

Enable remote log

IP address:

port:

Follow the steps below to set up the remote log:

1. Select **Enable remote log**.
2. In the IP address text box, enter the IP address of the remote server.
2. In the port text box, enter the port number of the remote server.
3. When completed, click **Save** to enable the setting.

You can configure the Network Camera to send the system log file to a remote server as a log backup. Before utilizing this feature, it is suggested that the user install a log-recording tool to receive system log messages from the Network Camera. An example is Kiwi Syslog Daemon. Visit <http://www.kiwisyslog.com/kiwi-syslog-daemon-overview/>.

May 11 15:00:13 automount[721]: >> mount: mounting /dev/mmcblk0p1 on /mnt/auto/CF
failed: No such device or address
May 11 15:00:13 automount[721]: mount(generic): failed to mount /dev/mmcblk0p1 (type vfat)
on /mnt/auto/CF

```

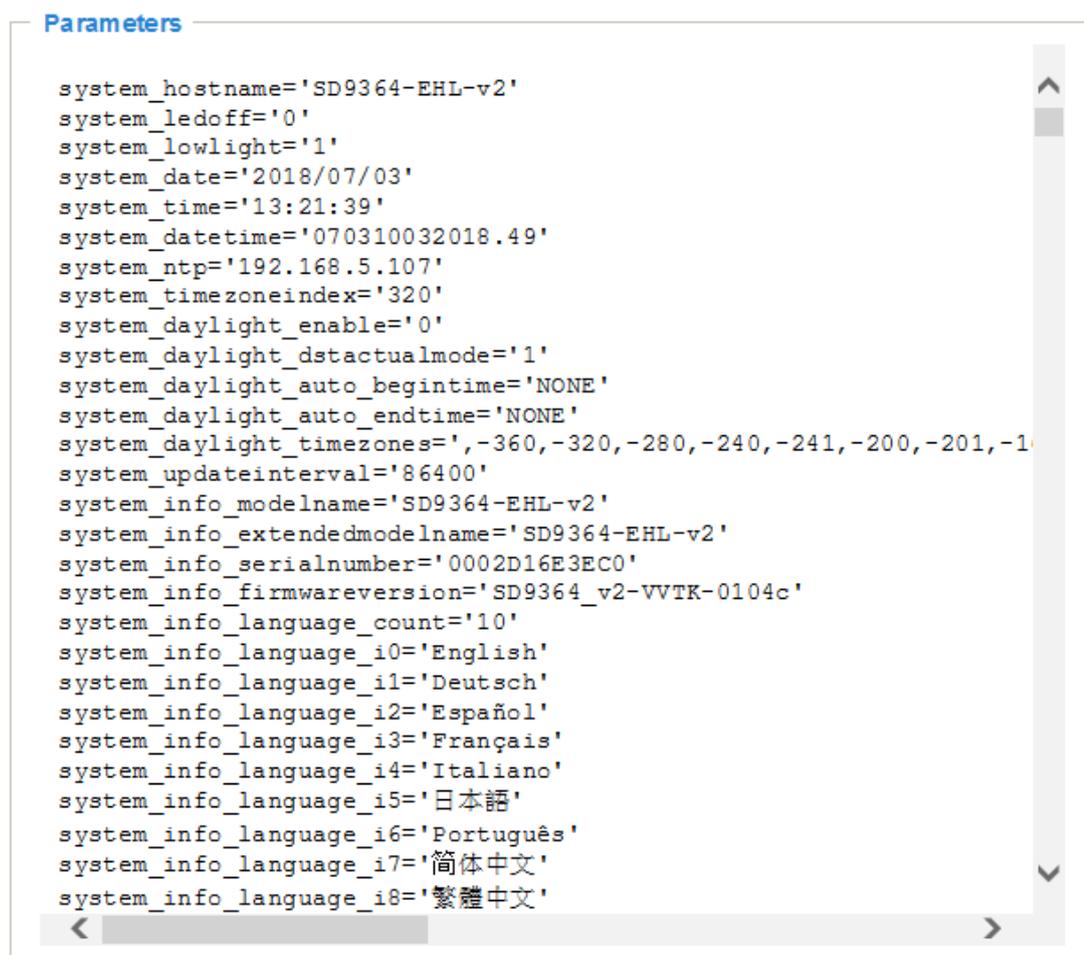

Access log

Access log displays the access time and IP address of all viewers (including operators and administrators) in a chronological order. The access log is stored in the Network Camera's buffer area and will be overwritten when reaching a certain limit.

System > Parameters

The View Parameters page lists the entire system's parameters in an alphabetical order. If you need technical assistance, please provide the information listed on this page.

System > Maintenance

This chapter explains how to restore the Network Camera to factory default, reboot, upgrade firmware version, etc.

General settings > Upgrade firmware

This feature allows you to upgrade the firmware of your Network Camera. It takes a few minutes to complete the process.

Note: Do not power off the Network Camera during the upgrade!

Follow the steps below to upgrade the firmware:

1. Download the latest firmware file from the VIVOTEK website. The file is in .pkg file format.
2. Click **Browse...** and specify the firmware file.
3. Click **Upgrade**. The Network Camera starts to upgrade and will reboot automatically when the upgrade completes.

If the upgrade is successful, you will see “Reboot system now!! This connection will close”. After that, refresh the management session with the Network Camera.

The following message is displayed when the upgrade has succeeded.

The following message is displayed when you have selected an incorrect firmware file.

General settings > Reboot

This feature allows you to reboot the Network Camera, which takes about one minute to complete. When completed, the live video page will be displayed in your browser. The following message will be displayed during the reboot process.

If the connection fails after rebooting, manually enter the IP address of the Network Camera in the address field to resume the connection.

General settings > Restore

— **Restore** —

Restore all settings to factory default except settings in

Network
 Daylight saving time
 Custom language
 VADP

This feature allows you to restore the Network Camera's factory defaults.

Network: Select this option to retain the Network Type settings (please refer to Network Type on page 80).

Daylight Saving Time: Select this option to retain the Daylight Saving Time settings (please refer to Import/Export files below on this page).

Custom Language: Select this option to retain the Custom Language settings.

VADP: Retain the VADP modules (3rd-party software stored on the SD card) and related settings.

If none of the options is selected, all settings will be restored to factory default. The following message is displayed during the restoring process.

The device is rebooting now. Your browser will reconnect to <http://192.168.5.151:80/>
If the connection fails, please manually enter the above IP address in your browser.

Import/Export files

This feature allows you to Export / Update daylight saving time rules, custom language file, and configuration file.

General settings **Import/Export files**

Export files

Export daylight saving time configuration file	<input type="button" value="Export"/>
Export language file	<input type="button" value="Export"/>
Export configuration file	<input type="button" value="Export"/>
Export server status report	<input type="button" value="Export"/>

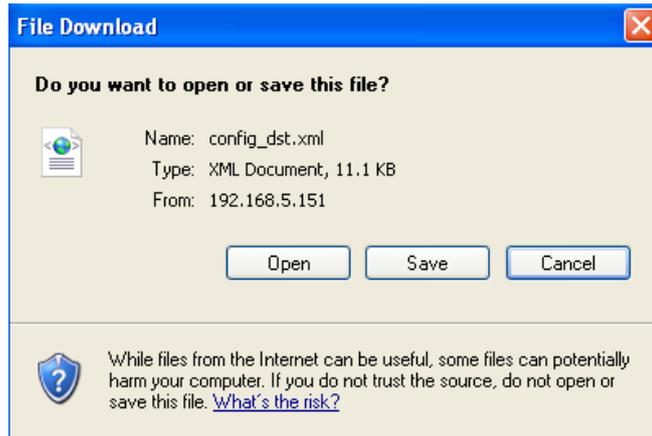

Upload files

Update daylight saving time rules:	<input type="text"/>	<input type="button" value="Browse..."/>	<input type="button" value="Upload"/>
Update custom language file:	<input type="text"/>	<input type="button" value="Browse..."/>	<input type="button" value="Upload"/>
Upload configuration file:	<input type="text"/>	<input type="button" value="Browse..."/>	<input type="button" value="Upload"/>

Export daylight saving time configuration file: Click to set the start and end time of DST.

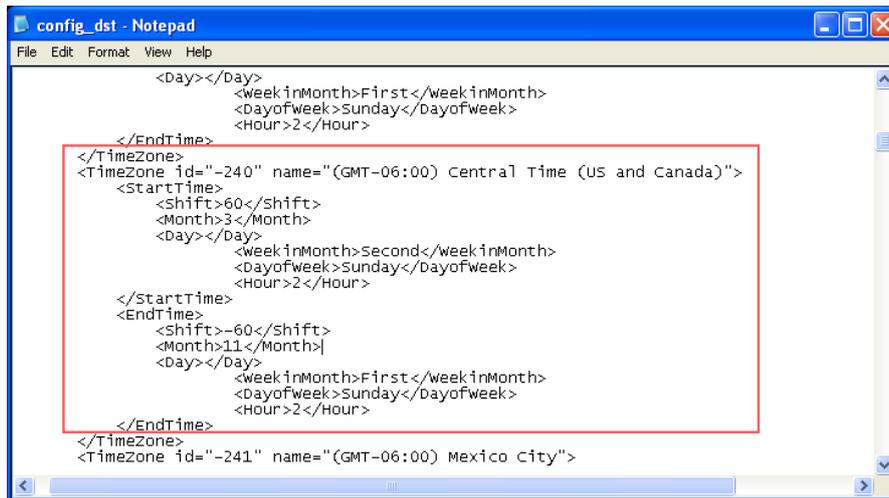

Follow the steps below to export:

1. In the Export files column, click **Export** to export the daylight saving time configuration file from the Network Camera.
2. A file download dialog will pop up as shown below. Click **Open** to review the XML file or click **Save** to store the file for editing.

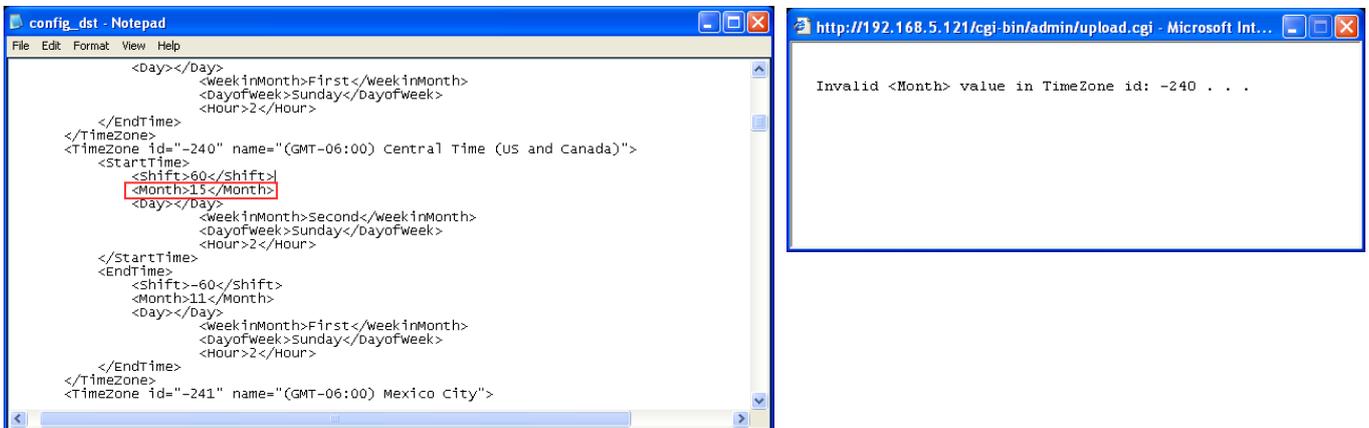

- Open and edit the file using Microsoft® Notepad and locate your time zone in the strings; set the start and end time of DST. When completed, save the file.

In the example below, DST begins each year at 2:00 a.m. on the second Sunday in March and ends at 2:00 a.m. on the first Sunday in November.

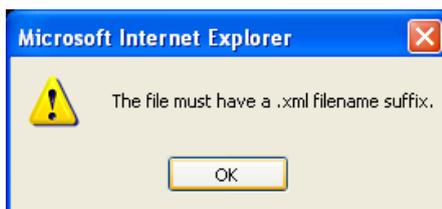

Update daylight saving time rules: Click **Browse...** and specify the XML file to update.

If the incorrect date and time are assigned, you will see the following warning message when uploading the file to the Network Camera.

The following message is displayed when attempting to upload an incorrect file format.

Export language file: Click to export language strings. VIVOTEK provides nine languages: English, Deutsch, Español, Français, Italiano, 日本語, Português, 簡體中文, and 繁體中文.

Update custom language file: Click **Browse...** and specify your own custom language file to upload.

Export configuration file: Click to export all parameters for the device and user-defined scripts.

Update configuration file: Click **Browse...** to update a configuration file. Please note that the model and firmware version of the device should be identical to those specified for the configuration file. If you have set up a fixed IP or other special settings for your device, it is not suggested to update a configuration file.

Export server status report: Click to export the current server status report, such as time, logs, parameters, process status, memory status, file system status, network status, kernel message..., and so on.

Tips:

- If a firmware upgrade is accidentally disrupted, say, by a power outage, you still have a last resort method to restore normal operation. See the following for how to bring the camera back to work:

Applicable scenario:

- (1) Power disconnected during firmware upgrade.
- (2) Unknown reason causing abnormal LED status, and a Restore cannot recover normal working condition.

You can use the following methods to activate the camera with its backup firmware:

- (1) Press and hold down the reset button for at least one minute.
- (2) Power on the camera until the Red LED blinks rapidly.
- (3) After boot up, the firmware should return to the previous version before the camera hanged. (The procedure should take 5 to 10 minutes, longer than the normal boot-up process). When this process is completed, the LED status should return to normal.

Media > Image

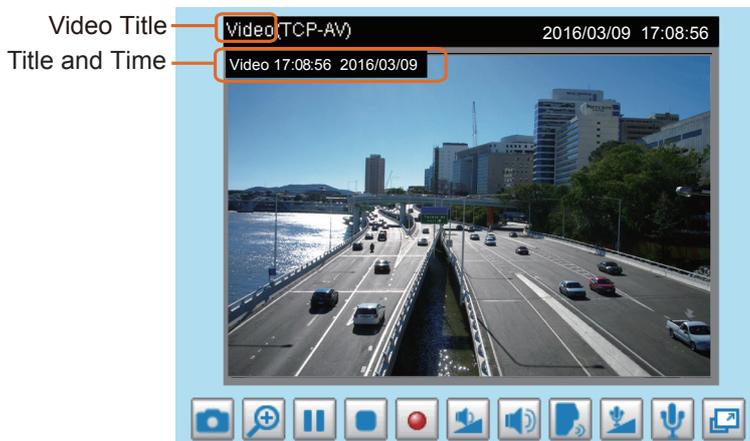

This section explains how to configure the image settings of the Network Camera. It is composed of the following four columns: General settings, IR control, Image settings, Exposure, and Privacy mask.

General settings

General settings	IR control	Image settings	Exposure	Privacy mask
<p>Video settings</p> <p>Video title: <input type="text"/></p> <p><input type="checkbox"/> Show timestamp and video title in video and snapshots</p> <p>Position of timestamp and video title on image: <input type="text" value="Top"/></p> <p>Timestamp and video title font-size: <input type="text" value="30"/></p> <p>Video font (.ttf): <input type="text" value="Default"/> <input type="button" value="Upload"/></p> <p>Mount type: <input checked="" type="radio"/> Ceiling <input type="radio"/> Wall <input type="radio"/> Floor</p> <p>Color: <input type="radio"/> BW <input checked="" type="radio"/> Color</p> <p>Power line frequency: <input type="radio"/> 50 Hz <input checked="" type="radio"/> 60 Hz</p> <p>Video orientation: <input checked="" type="checkbox"/> Flip <input checked="" type="checkbox"/> Mirror</p>				

Video title

Show timestamp and video title in videos and snapshots: Enter a name that will be displayed on the title bar of the live video as the picture shown below.

Position of timestamp and video title on image: Select to display time stamp and video title on the top or at the bottom of the video stream.

Timestamp and video title font size: Select the font size for the time stamp and title.

Video font (.ttf): You can select a True Type font file for the display of textual messages on video.

Mount type: Select Ceiling, Wall, or Floor to determine the default imaging orientation of the camera.

Color: Select to display color or black/white video streams.

Power line frequency: Set the power line frequency consistent with local utility settings to eliminate image flickering associated with fluorescent lights. Note that after the power line frequency is changed, you must disconnect and reconnect the power cord of the Network Camera in order for the new setting to take effect.

Video orientation: Flip - vertically reflect the display of the live video; Mirror - horizontally reflect the display of the live video. Change the settings if the Network Camera is installed in a different orientation (which is rare for a speed dome) to correct the image orientation.

Day/Night Settings

Day/Night settings

Turn on external IR illuminator in night mode

Turn on built-in IR illuminator in night mode

IR cut filter: Auto mode ▼

Sensitivity of IR cut filter: 51 %

Select auto mode will disable profile of exposure settings.

IR cut filter

With a removable IR-cut filter, this Network Camera can automatically remove the filter to let IR light enter the light sensor during low light conditions.

- **Auto mode**
The Network Camera automatically removes the filter by judging the level of ambient light.
- **Day mode**
In day mode, the Network Camera switches on the IR cut filter at all times to block infrared light from reaching the sensor so that the colors will not be distorted.
- **Night mode**
In night mode, the Network Camera switches off the IR cut filter at all times for the sensor to accept infrared light, thus helping to improve low light sensitivity.
- **Synchronize with digital input**
The Network Camera automatically removes the IR cut filter when a Digital Input is triggered. For example, the digital input can come from a housing that is equipped with IR illumination and control circuits such as VIVOTEK's AM-214.
- **Schedule mode**
The Network Camera switches between day mode and night mode based on a specified schedule. Enter the start and end time for day mode. Note that the time format is [hh:mm] and is expressed in 24-hour clock time. By default, the start and end time of day mode are set to 07:00 and 18:00.

Sensitivity of IR cut filter

Tune the responsiveness of the IR cut filter to lighting conditions by the percentage. Judging by the light level, contrast, and color hue, the light sensing algorithms enables the switch between day and night modes. The actual lighting conditions can vary when the lens modules zooms in/out to a target area.

When completed with the settings on this page, click **Save** to enable the settings.

IR control

Turn on built-in IR illuminator in night mode

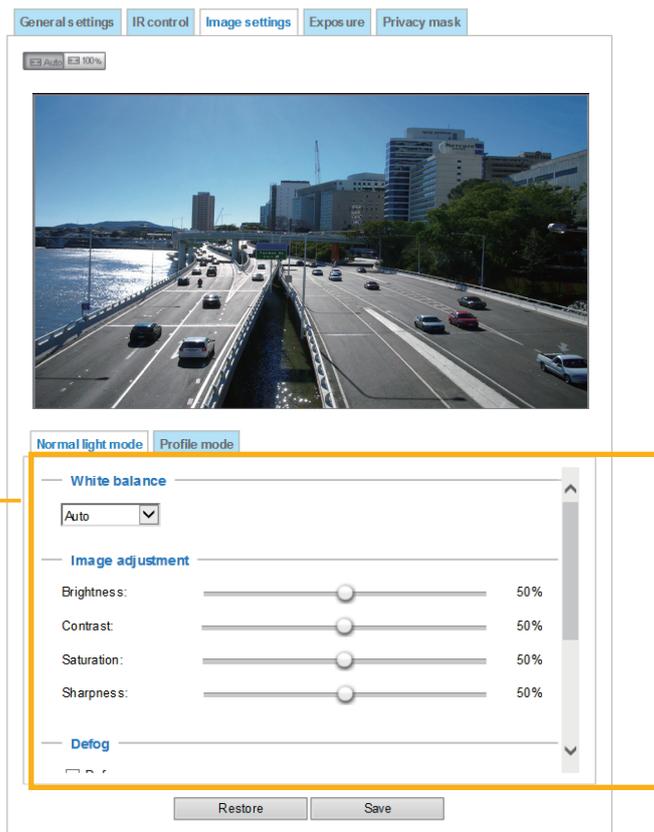

Select this to turn on the built-in IR illuminator when the camera detects low light condition and enters the night mode. Default is selected.

Turn on external IR illuminator in night mode

Select this to turn on the external IR illuminator when the camera detects low light condition and enters the night mode. A Digital Output connection to external IR is needed.

Image settings

On this page, you can tune the White balance and Image adjustment settings.

Sensor Setting 1:
For normal situations

White balance: Adjust the value for the best color temperature.

■ Select one of the white balance modes:

1. **Outdoor** (system default): Using this mode enables the camera to capture images with natural white balance observable in the morning.
2. **Indoor:** 3,200K base mode, suitable for indoor applications.

■ **Fix current value:** This option is available when the tuning the white balance. When selected, the camera will use the current color temperature setting. Note that you should use the Save button below to preserve current configuration. Otherwise, the white balance mode will return to Auto after you leave the configuration page.

■ **Manual:** In the manual mode, you can manually tune the R gain and Blue gain values by dragging the slide bars. Index numbers will be shown on the right hand side while changes in image is immediately displayed.

Image Adjustment

- **Brightness:** Adjust the image brightness level, which ranges from -5 to +5.
- **Contrast:** Adjust the image contrast level, which ranges from -5 to +5.
- **Saturation:** Adjust the image saturation level, which ranges from 0% to 100%.
- **Sharpness:** Adjust the image sharpness level, which ranges from 0% to 100%.

Defog: Defog helps improve the visibility quality of captured image in poor weather conditions such as smog, fog, or smoke.

Enable 3D Noise reduction

- Check to enable noise reduction in order to reduce noises and flickers in image. This applies to the onboard 3D Noise Reduction feature. Use the pull-down menu to adjust the reduction strength. Note that applying this function to the video channel will consume system computing power.

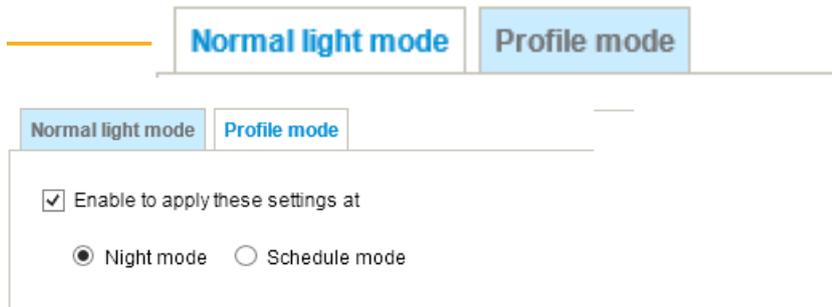

3D Noise Reduction is mostly applied in low-light conditions. When enabled in a low-light condition with fast moving objects, trails of after-images may occur. You may then select a lower strength level or disable the function.

Electronic image stabilizer

Select the checkbox to enable the Electronic image stabilization (EIS) function.

Note that the **Preview** button has been cancelled, all changes made to image settings is directly shown on screen. You can click **Restore** to recall the original settings without incorporating the changes. When completed with the settings on this page, click **Save** to enable the setting. You can also click on **Profile mode** to adjust all settings above in a pop-up window for special lighting conditions during a specific period of time in a day.

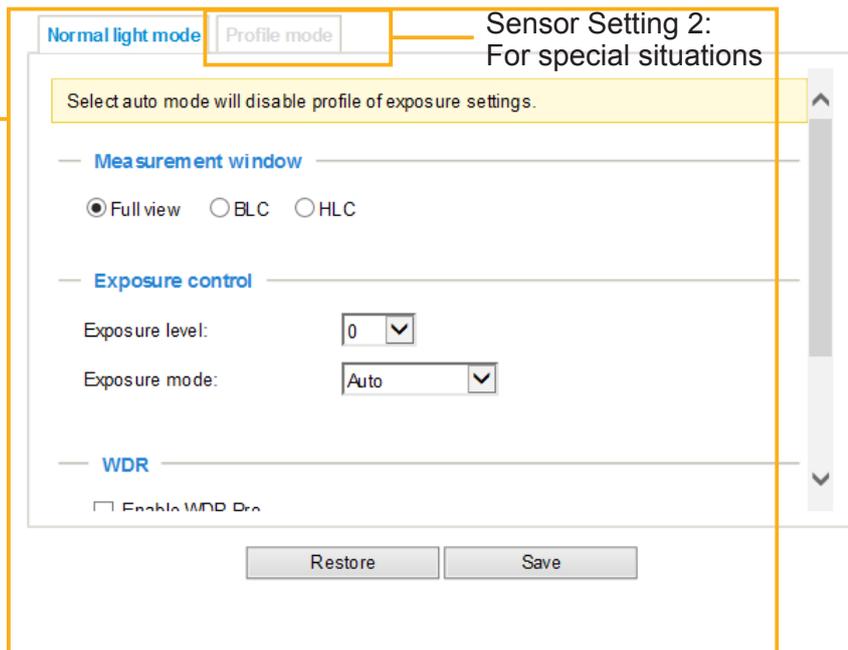

Sensor Setting 2:
For customized situations such as night mode.

Exposure

On this page, you can set the Exposure level, Max gain, Exposure mode, and IR cut filter related settings. Detailed configurations will be automatically adjusted since the sensor library will automatically adjust the value according to the ambient light.

Sensor Setting 1:
For normal situations

Sensor Setting 2:
For special situations

Measurement Window: This function allows users to set measurement window(s) for low light compensation. For example, where low-light objects are posed against an extremely bright background. You may want to exclude the bright sunlight shining through a building's corridor.

- **Full view:** Calculate the full range of view and offer appropriate light compensation.
- **BLC (Back Light Compensation):** This option will automatically add a “weighted region“ in the middle of the window and give the necessary light compensation.
- **HLC:** (Highlight Compensation). Firmware detects strong light sources and compensates on affected spots to enhance the overall image quality. For example, the HLC helps reduce the glares produced by spotlights or headlights.

Exposure control:

■ **Exposure level:** You can manually set the Exposure level, which ranges from -2.0 to +2.0 (dark to bright). You can also select other values from the Exposure mode menus and select a preferred scenario or manually configure the associated settings. You may prefer a shorter shutter time to better capture moving objects, while a faster shutter reduces light and needs to be compensated by electrical brightness gains.

■ **Exposure mode:**

Select **Auto**, **Shutter Priority**, **Quality Priority**, **Iris Priority**, or **Manual** mode according to your needs.

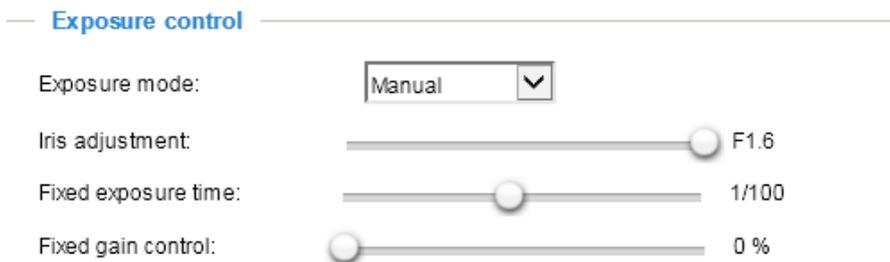

- **Auto:** System default, which automatically adjusts the iris, shutter speed, and gain for an optimal exposure level.

- **Iris Priority:** When selected, the **Iris adjustment** slide bar will appear, allowing you to select an aperture size ranging from F14 to F1.6. Once a fixed value is selected, system firmware will automatically tune the gain and exposure time to match an optimal exposure level. The value is measured in the F-number as the ratio of the focal length to the lens diameter. Iris size is inversely proportional to the F-number; therefore, the smaller the F-number, the greater is the exposure ratio. Smaller F-number (larger exposure ratio, largest size of lens aperture opening) is shown on the right of the slide bar.

- **Quality Priority:** When selected, the embedded mapping table of aperture size and depth of field will apply when operating with the auto focus mechanism. This applies when both artificial lights (city street lights) and IR lights are present in scenes and the camera needs to select an appropriate aperture size for an optimal focus. This is also coordinated with lens zoom ratio with different depths of view. For example, when zooming in on a scene with a 20x or 30x zoom ratio, the FoV becomes very small, the aperture size will adapt to enable the best possible focus to identify objects with the presence of both artificial lights and the camera's IR lights.

- **Shutter Priority:** When selected, the **Exposure time** slide bar will appear, allowing you to select an exposure time ranging from 1/10,000, to 1/1 second. Once a fixed value is selected, system firmware will automatically tune the gain and iris settings to match an optimal exposure level.

- **Manual:** Select **Manual** to set a fixed exposure time, iris, and gain. Then, tune the slide bar to set the Exposure time, Iris adjustment, and Gain Control to the best image quality. A shorter exposure time allows less amount of light to enter the sensor; while a higher gain control value generates certain amount of noises.

Note the following when the **Manual** mode is selected:

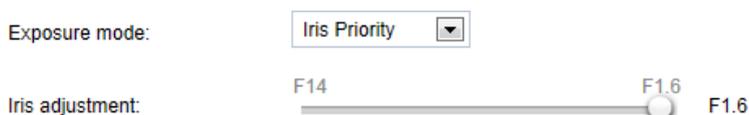

1. The **Exposure level** bar will not be available.
2. The **IR cut filter** setting will switch to **Day Mode**. If it was previously configured into other modes, the previous setting remains intact.

Manual: Note that **WDR** and **Defog** functions will be disabled using the **Manual mode setting**.

NOTE:

- When **Iris Priority** is selected for the **Exposure mode**, the tunable aperture size is related to zoom ratio. When using different zoom ratios, the range of aperture sizes can be different. When zoom ratio is 0x, the range of iris sizes is F1.6~F14. When zoom ratio is 20x, the iris size is F3.4.

- **Maximum gain control:** Select a maximum value for the electronic gain from the slide bar. The gain value also has its effect on the sensitivity of the IR cut filter. When applying the gain control, IR cut filter setting will change accordingly.
- **WDR Pro (Wide Dynamic Range):** Default is on. When set to Auto, you can select the strength of the WDR function. The Low, Medium, High options correspond to the level of contrast between the over-lit area and the shaded areas. For example, the High option applies to a high contrast scenario. Note that when the exposure time is set to longer than 1/60 second, the WDR function will be disabled.

IMPORTANT:

1. Because the exposure settings are also available in the **Profile** setting, incorrect configurations such as a very high exposure level will let the camera consider it is operating in the Day mode even when the ambient light is actually low. The camera will falsely remove the IR cut filter, and thus results in distorted image colors.

Therefore, when the IR cut filter is in the Auto mode, the **Profile** setting is not available.

- 2. When set to the Night mode, the image display automatically changes to Black and White.
- 3. There is no Preview button in the Exposure window. Configuration changes are directly reflected in the live view window.

Exposure Profile: (Only available when the IR cut filter is not set to the Auto mode)

If you want to configure another sensor and exposure setting for an individual day/night/schedule mode, please click **Profile mode** to open the Profile of exposure settings page as shown below.

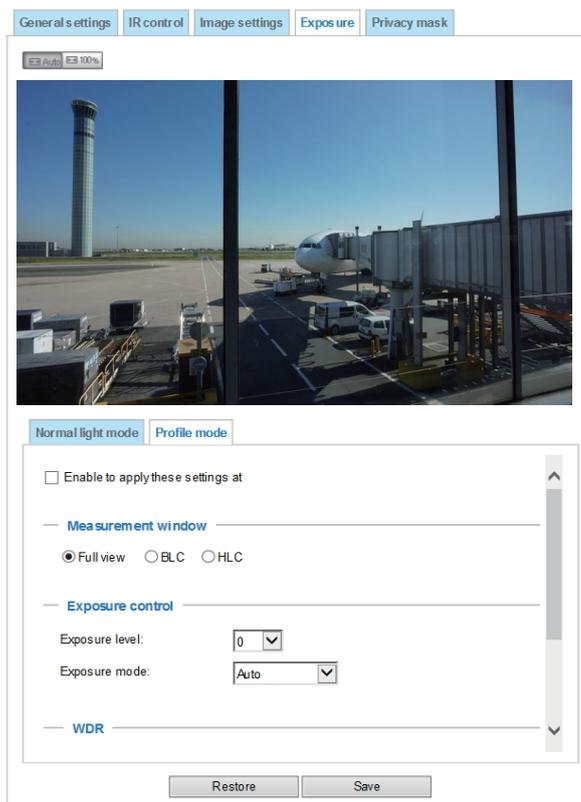

Enable to apply these settings at: Select the mode this profile to apply to the Night mode or Schedule mode. Please manually enter a range of time if you choose Schedule mode. Then check **Save** to take effect.

Please follow the steps below to set up a profile:

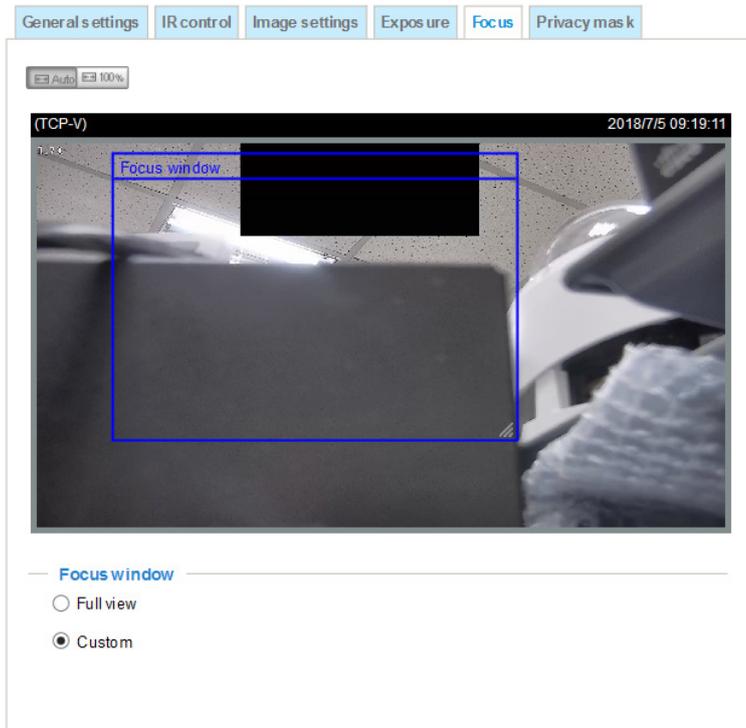

- 1. Select the **Enable to apply these settings at** checkbox.
- 2. Select the applicable Night mode or Schedule mode. Please manually enter a range of time if you choose Schedule mode.

When a span of time is configured using the Schedule mode, you can configure the Day/Night setting for controlling the behavior of the IR cut filter during that time.

- 3. Configure Exposure control settings in the following columns. Please refer to previous discussions for detailed information.
- 4. Click **Save** to enable the setting and click **Close** to exit the window.

Focus

Chances are while moving the lens around the surveillance area, focusing can be slow when zooming in on a complex scene with no distinctive objects especially in the center of the field of view. If this occurs, you can select the **Custom** mode, and configure a Focus window in the middle of the field of view.

With a Focus window in the center or a place you prefer in the FOV, the camera can more rapidly focus on an object of your interest while scanning through the entire surveillance area.

Focus window:

By default, the optimal focus is found on a full view window. You may designate a custom window within your current field of view to acquire the best focus out of it.

- **Full view:** The focus tuning takes place by referring to the full view.
- **Custom:** You can create a focus window and drag it to a place of interest in your view window. Note that it is recommended to use this function only when you have a solid object in your view window that is showing a consistent color or texture. This function will not take effect if you set the focus window on a distant background.

Privacy mask

On this page, you can block out sensitive view areas to address privacy concerns.

General settings | IR control | Image settings | Exposure | Privacy mask

Go to: -- Select one --

— Privacy mask —

Enable privacy mask

Drawing mode: Fixed in center

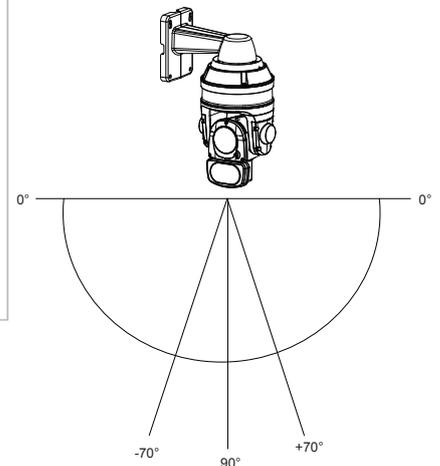

Color: [Black]

Name: [] Add

Privacy mask: 3 Modify Delete

NOTE:

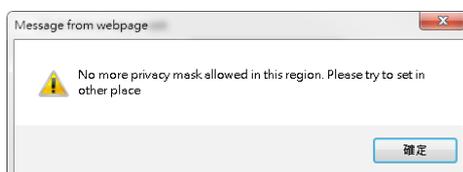

1. The navigation buttons here also support the continuous move. You can click and hold down the button to move across the screen until you release the button.
2. You can not create privacy masks at angles between $+70^\circ$ and -70° .

■ To set the privacy mask windows, follow the steps below:

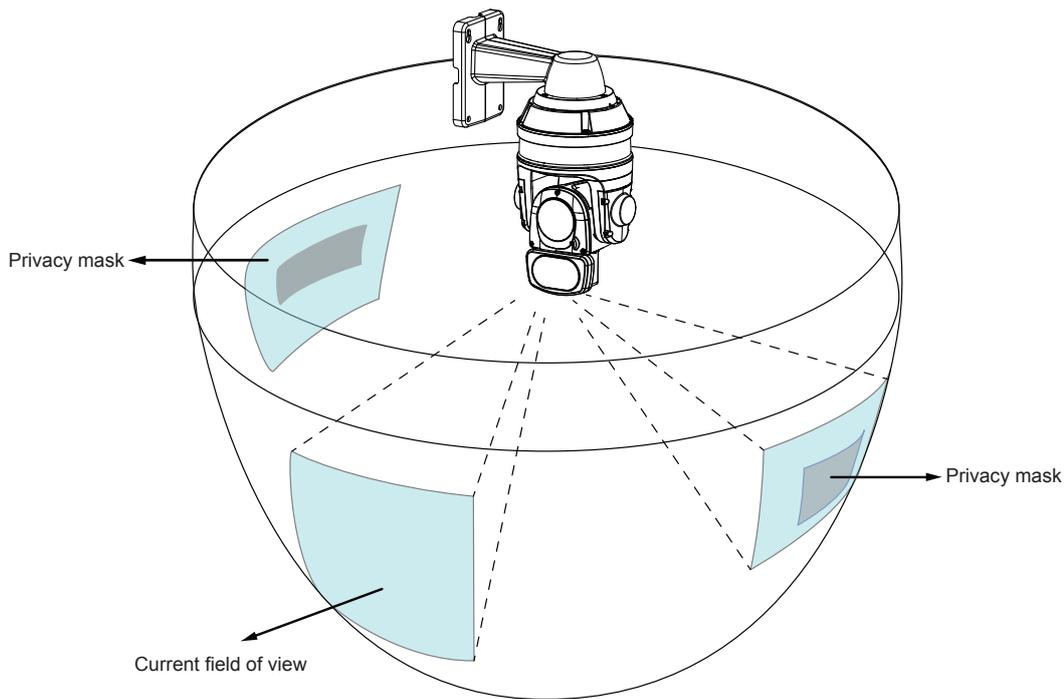

1. Click on the **Enable privacy mask** checkbox to enable this function.
2. Use mouse clicks on the screen to move to a place where you want to create a mask. You can also use the PTZ panel to fine-tune the move to the target area.
3. Enter a name for the masking window. Click **Add** to create a new window.
4. Click on the **Modify** button and then use the mouse cursor to re-size the masking window, which is recommended to be at least twice the size of the object (height and width) you want to cover. You can select the Drawing mode as "Fixed in center" or "Drag to move."
 - When using the **Fixed in center** mode, you can move to the area of your interest, and then manually change the size and shape of the masking window.
 - When using the **Drag to move** mode, you can move to an area of your interest using the PTZ buttons above, and then click and drag to draw a masking window. The click to move maneuver is not available when you select the Drag to move mode.
5. You can also change the color of the mask from the **Color** menu.
6. If preferred, move the field of view to other places to create more privacy masks.

You may be prompted by the message when trying to create a privacy mask at angles between $+70^\circ$ and -70° .

**NOTE:**

- The camera supports "**3D Privacy Mask**." Privacy masks should stay at the same positions regardless of how the camera lens may move.
- When the "Enable privacy mask" checkbox is deselected, no privacy masks will appear on screen.
- Up to **24** privacy mask windows can be configured over the camera's hemispheric coverage.
- If you want to delete a privacy mask window, select its name from the pull-down menu at the bottom, and then click **Delete** to remove it.

Media > Video

Stream settings

Stream settings

- ▶ Video settings for stream 1
- ▶ Video settings for stream 2
- ▶ Video settings for stream 3
- ▶ Video settings for stream 4

Save

This Network Camera supports multiple streams with frame sizes ranging from 384 x 216 to 1920 x 1080 pixels.

The definition of multiple streams:

- Stream 1: Users can define the Frame sizes, compression format, image quality, etc.
- Stream 2: The default frame size for stream 2 is configured to 1280 x 720.
- Stream 3: The default frame size for Stream 3 is set to the minimized 640 x 360 for viewing on mobile devices.
- Stream 4: The default frame size for stream 4 is configured to 1920 x 1080 in the H.265 or H.264 mode.

Click the stream item to display the detailed information. .

The screenshot shows four panels of video settings for different streams. Each panel includes a codec selection (H.265 or H.264), frame size, maximum frame rate, intra frame period, smart stream II options, and bit rate control settings (constrained or fixed quality).

- Stream 1:** H.264, 1920x1080, 60 fps, 1 S, Constrained bit rate, Detailed, 8 Mbps, Frame rate priority.
- Stream 2:** H.264, 1280x720, 60 fps, 1 S, Constrained bit rate, Detailed, 8 Mbps, Frame rate priority.
- Stream 3:** H.264, 848x360, 15 fps, 1 S, Constrained bit rate, Detailed, 512 kbps, Image quality priority.
- Stream 4:** H.264, 1920x1080, 60 fps, 1 S, Constrained bit rate, Detailed, 8 Mbps, Image quality priority.

This Network Camera offers real-time H.265, H.264, and MJPEG compression standards (Multiple Codec) for real-time viewing. If the **H.265 / H.264** mode is selected, the video is streamed via RTSP protocol. There are several parameters through which you can adjust the video performance:

The image shows a close-up of the H.265 video settings panel. The H.265 radio button is highlighted with a yellow box. The settings are: Frame size: 1920x1080, Maximum frame rate: 60 fps, Intra frame period: 1 S, Smart stream II (Dynamic intra frame period and Smart codec are unchecked), Bit rate control (Constrained bit rate is selected, Target quality: Detailed, Maximum bit rate: 8 Mbps, Policy: Frame rate priority, Fixed quality is unselected). Below the H.265 settings are radio buttons for H.264 and JPEG.

NOTE:

- ▶ Video quality and fixed quality refers to the **compression rate**, so a lower value will produce higher quality.
- ▶ Converting high-quality video may significantly increase the CPU loading, and you may encounter streaming disconnection or video loss while capturing a complicated scene. In the event of occurrence, we suggest you customize a lower video resolution or reduce the frame rate to obtain smooth video.

■ Frame size

You can set up different video resolution for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers. Note that a larger frame size takes up more bandwidth.

■ Maximum frame rate

This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality and for recognizing moving objects in the field of view.

If the power line frequency is set to 50Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, 25fps, 30fps, 40fps, 45fps, and 50fps. If the power line frequency is set to 60Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, 25fps, 30fps, 40fps, 45fps, 50fps, 55fps, and 60fps. You can also select **Customize** and manually enter a value.

■ Intra frame period

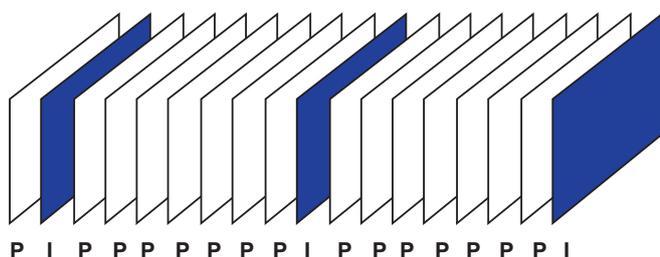

Determine how often for firmware to plant an I frame. The shorter the duration, the more likely you will get better video quality, but at the cost of higher network bandwidth consumption. Select the intra frame period from the following durations: 1/4 second, 1/2 second, 1 second, 2 seconds, 3 seconds, and 4 seconds.

■ Smart stream II

► Dynamic Intra frame period

High quality motion codecs, such as H.265, utilize the redundancies between video frames to deliver video streams at a balance of quality and bit rate.

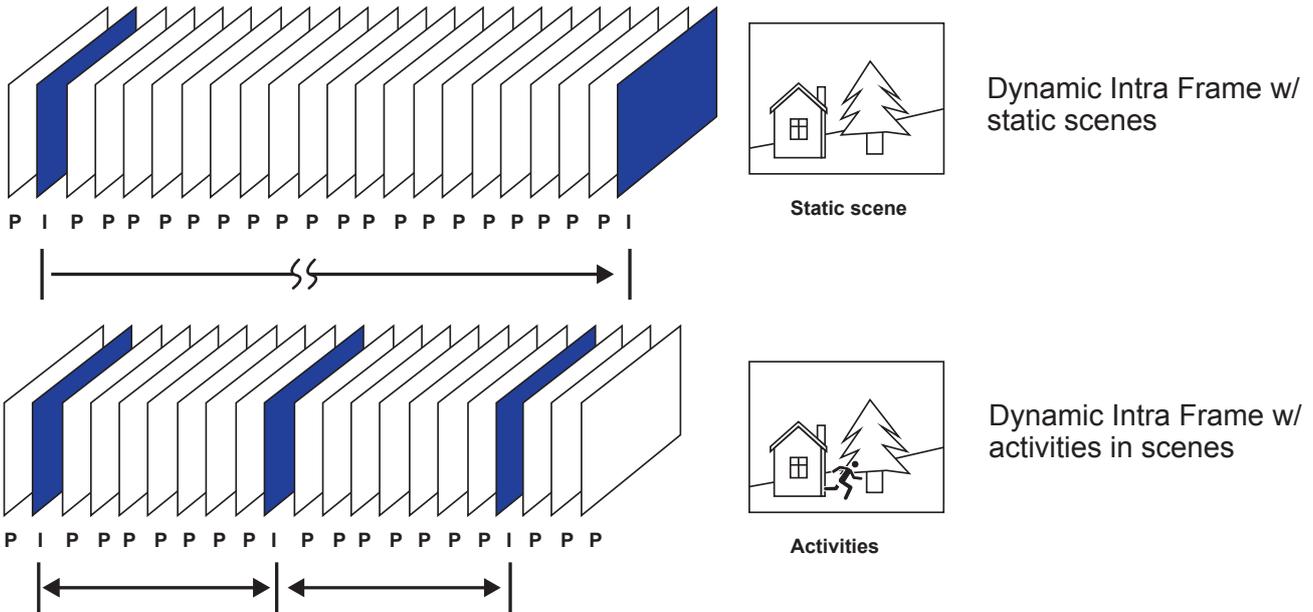

The encoding parameters are summarized and illustrated below. The **I-frames** are completely self-referential and they are largest in size. The **P-frames** are predicted frames. The encoder refers to the previous I- or P-frames for redundant image information.

H.264/265 Frame Types

By dynamically prolonging the intervals for I-frames insertion to up to 10 seconds, the bit rates required for streaming a video can be tremendously reduced. When streaming a video of a static scene, the Dynamic Intra frame feature can save up to 53% of bandwidth. The amount of bandwidth thus saved is also determined by the activities in the field of view. If activities occur in the scene, firmware automatically shortens the I-frame insertion intervals in order to maintain image quality. In the low light or night conditions, the sizes of P-frames tend to be enlarged due to the noises, and hence the bandwidth saving effect is also reduced.

Streaming a typical 2MP scene normally requires 3~4Mb/s of bandwidth. With the Dynamic Intra frame function, the bandwidth for streaming a medium-traffic scene can be reduced to 2~3Mb/s, and during the no-traffic period of time, down to 500kb/s.

With the H.265 codec in an optimal scenario and when the Dynamic Intra frame and the Smart Stream function are applied, an 80% of bandwidth saving can be achieved compared with using H.264 without enabling these bandwidth-saving features.

- **Smart codec:** Smart codec effectively reduces the quality of the whole or the non-interested areas on a screen and therefore reduces the bandwidth consumed.

You can manually specify the video quality for the foreground and the background areas.

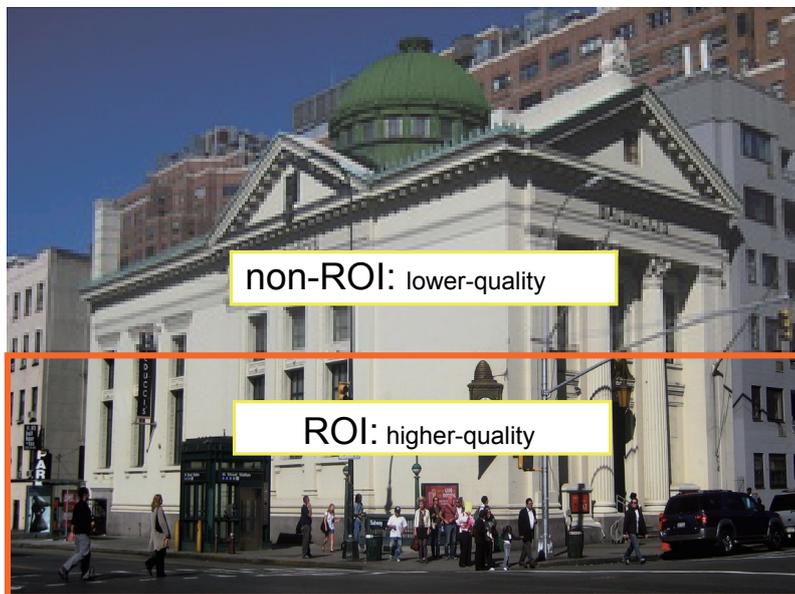

Select an operation mode if Smart codec is preferred.

- **Auto tracking:** The Auto mode configures the whole screen into the non-interested area. The video quality of part of the screen returns to normal when one or more objects move in that area. The remainder of the screen where there are no moving objects (no pixel changes) will still be transmitted in low-quality format.
- **Manual:** The Manual mode allows you to configure 3 ROI windows (Region of Interest, with Foreground quality) on the screen. Areas not included in any ROI windows will be considered as the non-interested areas. The details in the ROI areas will be transmitted in a higher-quality video format.

As illustrated below, the upper screen may contain little details of your interest, while the sidewalk on the lower screen is included in an ROI window.

As the result, the lower screen is constantly displayed in high details, while the upper half is transmitted using a lower-quality format. Although the upper half is transmitted using a lower quality format, you still have an awareness of what is happening on the whole screen.

- **Hybrid**: The major difference between the “Manual” mode and the “Hybrid” mode is that:

In the “**Hybrid**” mode, any objects entering the non-interested area will restore the video quality of the moving objects and the area around them. The video quality of the associated non-interested area is immediately restored to normal to cover the moving objects.

In the “**Manual**” mode, the non-interested area is always transmitted using a low-quality format regardless of the activities inside.

- **Quality priority:** Use the slide bar to tune the quality contrast between the ROI and non-interested areas.

The farther the slide bar button is to the right, the higher the image quality of the ROI areas. On the contrary, the farther the slide bar button to the left, the higher the image quality of the non-interested area.

In this way, you may set up an ROI window as a privacy mask by covering a protected area using an ROI window, while the remaining screen become the non-interested area. You may then configure the non-interested area to have a high image quality, or vice versa.

You should also select the Maximum bit rate from the pull-down menu as the threshold to contain the bandwidth consumption for both the high- and low-quality video sections in a smart stream.

■ Bit rate control

Constrained bit rate:

A complex scene generally produces a larger file size, meaning that higher bandwidth will be needed for data transmission. The bandwidth utilization is configurable to match a selected level, resulting in mutable video quality performance. The bit rates are selectable at the following rates: 20Kbps, 30Kbps, 40Kbps, 50Kbps, 64Kbps, 128Kbps, 256Kbps, 512Kbps, 768Kbps, 1Mbps, 2Mbps, 3Mbps, 4Mbps, 6Mbps, 8Mbps, 10Mbps, 12Mbps, 14Mbps, ~ to 40Mbps. You can also select **Customize** and manually enter a value up to 40Mbps.

- - **Target quality:** Select a desired quality ranging from Medium to Excellent
- **Maximum bit rate:** select a bit rate from the pull-down menu. The bit rate ranges from 20kbps to a maximum of 40Mbps. The bit rate then becomes the Average or Upper bound bit rate number. The Network Camera will strive to deliver video streams around or within the bit rate limitation you impose.
- **Policy:** If Frame Rate Priority is selected, the Network Camera will try to maintain the frame rate per second performance, while the image quality will be compromised. If Image quality priority is selected, the Network Camera may drop some video frames in order to maintain image quality.

Fixed quality:

On the other hand, if **Fixed quality** is selected, all frames are transmitted with the same quality; bandwidth utilization is therefore unpredictable. The video quality can be adjusted to the following settings: Medium, Standard, Good, Detailed, and Excellent. You can also select **Customize** and manually enter a value.

Maximum bit rate: With the guaranteed image quality, you might still want to place a bit rate limitation to control the size of video streams for bandwidth and storage concerns. The configurable bit rate starts from 1Mbps to 40Mbps.

The Maximum bit rate setting in the Fixed quality configuration can ensure a reasonable and limited use of network bandwidth. For example, in low light conditions where a Fixed quality setting is applied, video packet sizes can tremendously increase when noises are produced with electrical gains.

You may also manually enter a bit rate number by selecting the **Customized** option.

If the **JPEG** mode is selected, the Network Camera sends consecutive JPEG images to the client, producing a moving effect similar to a filmstrip. Every single JPEG image transmitted guarantees the same image quality, which in turn comes at the expense of variable bandwidth usage. Because the media contents are a combination of JPEG images, no audio data is transmitted to the client. There are three parameters provided in MJPEG mode to control the video performance:

JPEG

Frame size: 1920x1080 ▼

Maximum frame rate: 10 fps ▼

Bit rate control

Constrained bit rate:

Target quality: Detailed ▼

Maximum bit rate: 6 Mbps ▼

Policy: Frame rate priority ▼

Fixed quality:

■ Frame size

You can set up different video resolution for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers. Note that a larger frame size takes up more bandwidth.

■ Maximum frame rate

This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality.

If the power line frequency is set to 50Hz, the frame rates are selectable from 1fps to 25fps. If the power line frequency is set to 60Hz, the frame rates are selectable from 1fps to 30fps. You can also select **Customize** and manually enter a value. The frame rate will decrease if you select a higher resolution.

■ Video quality

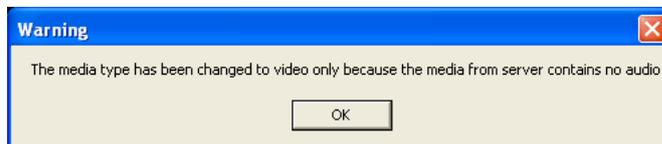

Refer to the previous page setting an average or upper bound threshold for controlling the bandwidth consumed for transmitting motion jpegs. The configuration method is identical to that for H.264.

For Constant Bit Rate and other settings, refer to the previous page for details.

Media > Audio

Audio Settings

Mute: Select this option to disable audio transmission from the Network Camera to all clients. Note that if muted, no audio data will be transmitted even if audio transmission is enabled on the Client Settings page. In that case, the following message is displayed:

External microphone input gain: Select the gain of the external audio input according to ambient conditions. Adjust the gain from +21 db (most sensitive) or -33db (least sensitive).

Audio type: Select audio codec as G.711 or G.726, and the sampling bit rate .

- G.711 also provides good sound quality and requires about 64Kbps. Select pcmu (μ -Law) or pcma (A-Law) mode.
- G.726 is a speech codec standard covering voice transmission at rates of 16, 24, 32, and 40kbit/s.

When completed with the settings on this page, click **Save** to enable the settings.

IMPORTANT:

The network camera does not come with embedded microphone. An external microphone will be necessary especially if you prefer the **Audio Detection** feature. By default, the Audio setting is muted, and you need to manually deselect the **Mute** option.

Audio clips

- **Output gain:** Use the slide bar to change the audio output gains value.
- **Audio clip:** When the camera's audio input is connected to a microphone, you can record a short period of audio recordings (1 to 10 seconds). You can also use the camera's embedded microphone to record an audio clip, if available. Because the memory space is limited, a recording count down will be available on screen.

You can also upload an audio file to the camera's flash memory. With amplified speakers, you can playback the audio, e.g., to deter an intruder. A maximum of 2 audio clips in wav format are supported. The maximum size of the audio file to be uploaded is 2,000Kbytes.

The voice alert is enabled in the **Event settings > action > Play Audio Clip**. The action can be associated with triggering conditions.

Network > General settings

This section explains how to configure a wired network connection for the Network Camera.

Network Type

LAN

Select this option when the Network Camera is deployed on a local area network (LAN) and is intended to be accessed by local computers. The default setting for the Network Type is LAN. Please remember to click on the **Save** button when you complete the Network setting.

Get IP address automatically: Select this option to obtain an available dynamic IP address assigned by the DHCP server each time the camera is connected to the LAN.

Use fixed IP address: Select this option to manually assign a static IP address to the Network Camera.

1. You can make use of VIVOTEK Installation Wizard 2 on the software CD to easily set up the Network Camera on LAN. Please refer to Software Installation on page 26 for details.
2. Enter the Static IP, Subnet mask, Default router, and Primary DNS provided by your ISP or network administrator.

Subnet mask: This is used to determine if the destination is in the same subnet. The default value is "255.255.255.0".

Default router: This is the gateway used to forward frames to destinations in a different subnet. Invalid router setting will disable the transmission to destinations across different subnets.

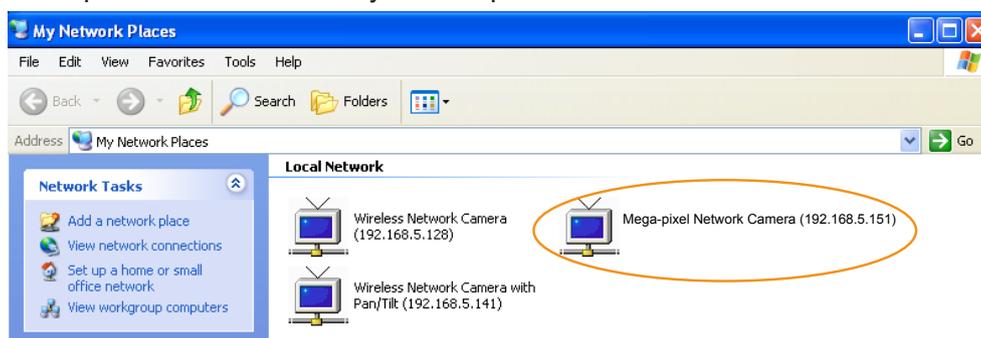

Primary DNS: The primary domain name server that translates host names into IP addresses.

Secondary DNS: Secondary domain name server that backs up the Primary DNS.

Primary WINS server: The primary WINS server that maintains the database of computer names and IP addresses.

Secondary WINS server: The secondary WINS server that maintains the database of computer names and IP addresses.

Enable UPnP presentation: Select this option to enable UPnP™ presentation for your Network Camera so that whenever a Network Camera is presented to the LAN, the shortcuts to connected Network Cameras will be listed in My Network Places. You can click the shortcut to link to the web browser. Currently, UPnP™ is supported by Windows XP or later. Note that to utilize this feature, please make sure the UPnP™ component is installed on your computer.

Enable UPnP port forwarding: To access the Network Camera from the Internet, select this option to allow the Network Camera to open ports automatically on the router so that video streams can be sent out from a LAN. To utilize of this feature, make sure that your router supports UPnP™ and it is activated.

PPPoE (Point-to-point over Ethernet)

Select this option to configure your Network Camera to make it accessible from anywhere as long as there is an Internet connection. Note that to utilize this feature, it requires an account provided by your ISP.

Follow the steps below to acquire your Network Camera's public IP address.

1. Set up the Network Camera on the LAN.
2. Go to Configuration > Event > Event settings > Add server (please refer to Add server on page 132) to add a new email or FTP server.
3. Go to Configuration > Event > Event settings > Add media (please refer to Add media on page 123). Select System log so that you will receive the system log in TXT file format which contains the Network Camera's public IP address in your email or on the FTP server.
4. Go to Configuration > Network > General settings > Network type. Select PPPoE and enter the user name and password provided by your ISP. Click **Save** to enable the setting.

Network type

LAN

PPPoE

User name:

Password:

Confirm password:

Enable IPv6

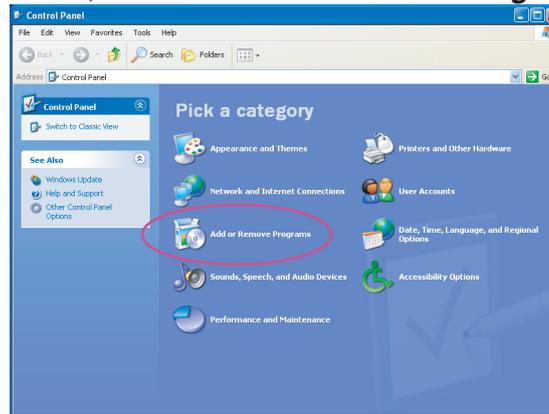

5. The Network Camera will reboot.

6. Disconnect the power to the Network Camera; remove it from the LAN environment.

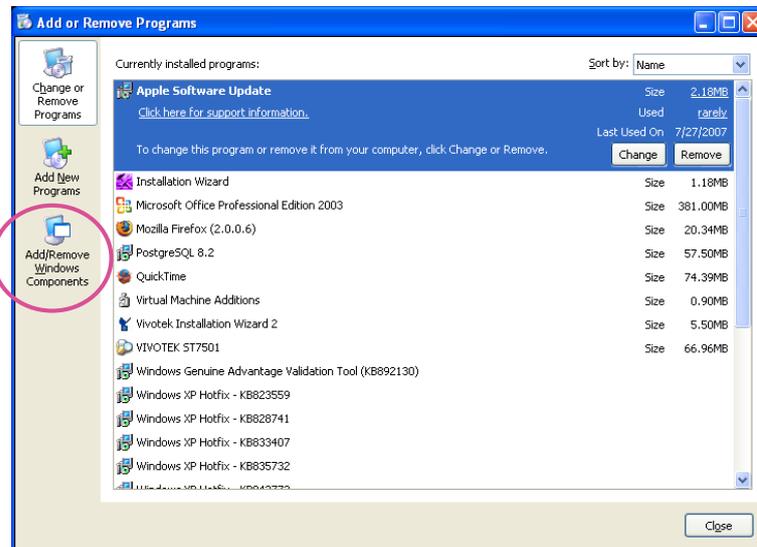

**NOTE:**

- ▶ If the default ports are already used by other devices connected to the same router, the Network Camera will select other ports for the Network Camera.
- ▶ If UPnP™ is not supported by your router, you will see the following message:
Error: Router does not support UPnP port forwarding.
- ▶ Steps to enable the UPnP™ user interface on your computer:
Note that you must log on to the computer as a system administrator to install the UPnP™ components.

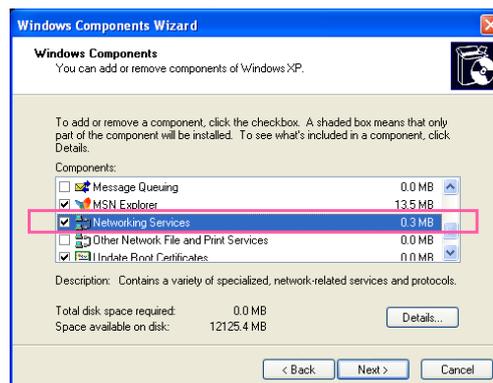

1. Go to Start, click **Control Panel**, then click **Add or Remove Programs**.

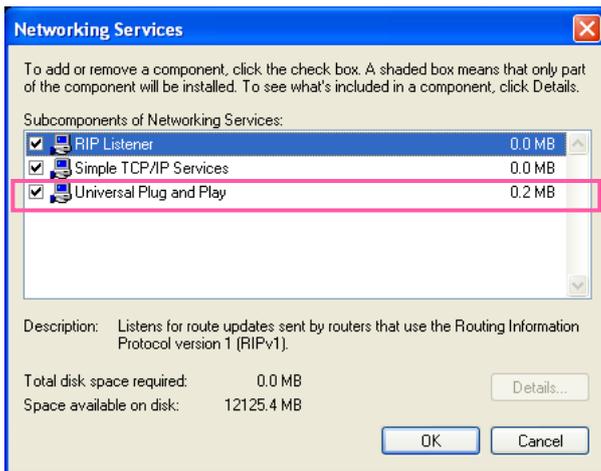

2. In the Add or Remove Programs dialog box, click **Add/Remove Windows Components**.

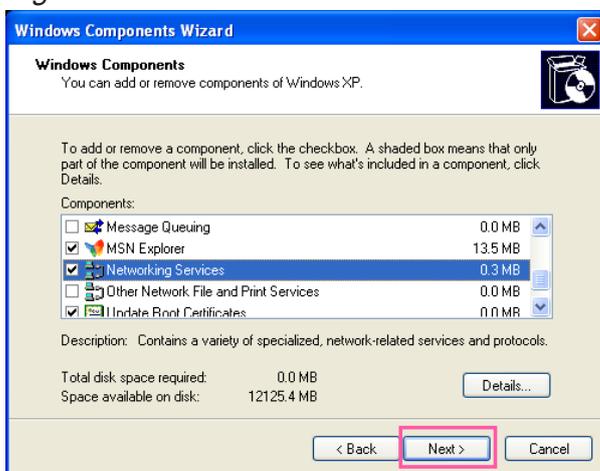

3. In the Windows Components Wizard dialog box, select **Networking Services** and click **Details**.

4. In the Networking Services dialog box, select **Universal Plug and Play** and click **OK**.

5. Click **Next** in the following window.

6. Click **Finish**. UPnP™ is enabled.

► **How does UPnP™ work?**

UPnP™ networking technology provides automatic IP configuration and dynamic discovery of devices added to a network. Services and capabilities offered by networked devices, such as printing and file sharing, are available among each other without the need for cumbersome network configuration. In the case of Network Cameras, you will see Network Camera shortcuts under My Network Places.

► **Enabling UPnP port forwarding allows the Network Camera to open a secondary HTTP port on the router-not HTTP port-meaning that you have to add the secondary HTTP port number to the Network Camera's public address in order to access the Network Camera from the Internet. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.**

From the Internet	In LAN
http://203.67.124.123:8080	http://192.168.4.160 or http://192.168.4.160:8080

► **If the PPPoE settings are incorrectly configured or the Internet access is not working, restore the Network Camera to factory default; please refer to Restore on page 57 for details. After the Network Camera is reset to factory default, it will be accessible on the LAN.**

Enable IPv6

Select this option and click **Save** to enable IPv6 settings.

Please note that this only works if your network environment and hardware equipment support IPv6. The browser should be Microsoft® Internet Explorer 6.5, Mozilla Firefox 3.0 or above.

Enable IPv6

[IPv6 information](#)

Manually setup the IP address

When IPv6 is enabled, by default, the network camera will listen to router advertisements and be assigned with a link-local IPv6 address accordingly.

IPv6 Information: Click this button to obtain the IPv6 information as shown below.

If your IPv6 settings are successful, the IPv6 address list will be listed in the pop-up window. The IPv6 address will be displayed as follows:

Refers to Ethernet

[eth0 address]	
2001:0c08:2500:0002:0202:d1ff:fe04:65f4/64@Global	— Link-global IPv6 address/network mask
fe80:0000:0000:0000:0202:d1ff:fe04:65f4/64@Link	— Link-local IPv6 address/network mask
[Gateway]	
fe80::211:d8ff:fea2:1a2b	
[DNS]	
2010:05c0:978d::

Optional primary DNS

Network > Streaming protocols

HTTP streaming

To utilize HTTP authentication, make sure that you have set a password for the Network Camera first; please refer to Security > User account on page 100 for details.

The screenshot shows the configuration page for HTTP streaming. At the top, there are three tabs: 'HTTP' (selected), 'RTSP', and 'SIP'. Below the tabs, there are several configuration fields:

- Authentication:** A dropdown menu set to 'basic'.
- HTTP port:** A text input field containing '80'.
- Secondary HTTP port:** A text input field containing '8080'.
- Access name for stream 1:** A text input field containing 'video1.mjpg'.
- Access name for stream 2:** A text input field containing 'video2.mjpg'.
- Access name for stream 3:** A text input field containing 'video3.mjpg'.
- Access name for stream 4:** A text input field containing 'video4.mjpg'.

At the bottom right of the configuration area, there is a 'Save' button.

Authentication: Depending on your network security requirements, the Network Camera provides two types of security settings for an HTTP transaction: basic and digest.

If **basic** authentication is selected, the password is sent in plain text format and there can be potential risks of being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm and thus provide better protection against unauthorized accesses.

HTTP port / Secondary HTTP port: By default, the HTTP port is set to 80 and the secondary HTTP port is set to 8080. They can also be assigned to another port number between 1025 and 65535. If the ports are incorrectly assigned, the following warning messages will be displayed:

To access the Network Camera on the LAN, both the HTTP port and secondary HTTP port can be used to access the Network Camera. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.

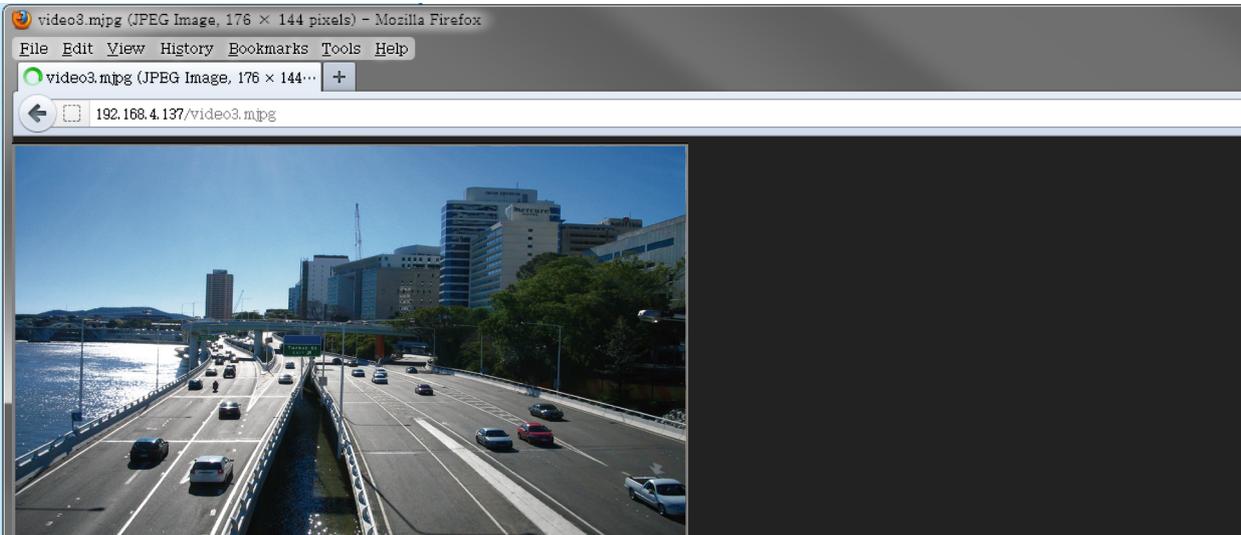

On the LAN
 http://192.168.4.160 or
 http://192.168.4.160:8080

Access name for stream 1 ~ 5: This Network camera supports multiple streams simultaneously. The access name is used to identify different video streams. Users can click **Media > Video > Stream settings** to set up the video quality of linked streams. For more information about how to set up the video quality, please refer to Stream settings on page 71.

When using **Mozilla Firefox** to access the Network Camera and the video mode is set to JPEG, users will receive video comprised of continuous JPEG images. This technology, known as "server push", allows the Network Camera to feed live pictures to Mozilla Firefox.

URL command -- <http://<ip address>:<http port>/<access name for stream 1, 2, 3, 4, or 5>>
 For example, when the Access name for stream 2 is set to [video2.mjpg](#):

1. Launch the Mozilla Firefox browser.
2. Type the above URL command in the address bar. Press **Enter**.
3. The JPEG images will be displayed in your web browser.

NOTE:

- ▶ *Microsoft® Internet Explorer does not support server push technology; therefore, using <http://<ip address>:<http port>/<access name for stream 1, 2, 3, 4, or 5>> will not work.*

RTSP Streaming

To utilize RTSP streaming authentication, make sure that you have set a password for controlling the access to video stream first. Please refer to Security > User account on page 100 for details.

HTTP	RTSP	SIP
Authentication: <input type="text" value="basic"/>		
Access name for stream 1: <input type="text" value="live.sdp"/>		
Access name for stream 2: <input type="text" value="live2.sdp"/>		
Access name for stream 3: <input type="text" value="live3.sdp"/>		
Access name for stream 4: <input type="text" value="live4.sdp"/>		
RTSP port: <input type="text" value="554"/>		
RTP port for video: <input type="text" value="5556"/>		
RTCP port for video: <input type="text" value="5557"/>		
RTP port for metadata: <input type="text" value="6556"/>		
RTCP port for metadata: <input type="text" value="6557"/>		
RTP port for audio: <input type="text" value="5558"/>		
RTCP port for audio: <input type="text" value="5559"/>		
▶ Multicast settings for stream 1		
▶ Multicast settings for stream 2		
▶ Multicast settings for stream 3		
▶ Multicast settings for stream 4		

Authentication: Depending on your network security requirements, the Network Camera provides three types of security settings for streaming via RTSP protocol: disable, basic, and digest.

If **basic** authentication is selected, the password is sent in plain text format, but there can be potential risks of it being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm, thus providing better protection against unauthorized access.

The availability of the RTSP streaming for the three authentication modes is listed below:

	Quick Time player	VLC
Disable	O	O
Basic	O	O
Digest	O	X

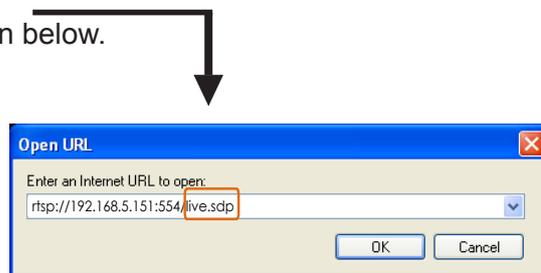

Access name for stream 1 ~ 5: This Network camera supports multiple streams simultaneously. The access name is used to differentiate the streaming source.

If you want to use an **RTSP player** to access the Network Camera, you have to set the video mode to **H.265 / H.264** and use the following RTSP URL command to request transmission of the streaming data.

`rtsp://<ip address>:<rtsp port>/<access name for stream 1 to 5>`

For example, when the access name for **stream 1** is set to **live.sdp**:

1. Launch an RTSP player.
2. Choose File > Open URL. A URL dialog box will pop up.
3. Type the above URL command in the text box.
4. The live video will be displayed in your player as shown below.

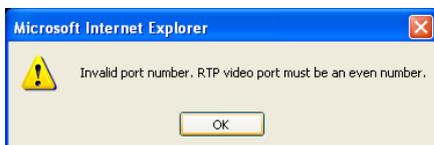

RTSP port /RTP port for video, audio/ RTCP port for video, audio

- RTSP (Real-Time Streaming Protocol) controls the delivery of streaming media. By default, the port number is set to 554.
- The RTP (Real-time Transport Protocol) is used to deliver video and audio data to the clients. By default, the RTP port for video is set to 5556 and the RTP port for audio is set to 5558.
- The RTCP (Real-time Transport Control Protocol) allows the Network Camera to transmit the data by monitoring the Internet traffic volume. By default, the RTCP port for video is set to 5557 and the RTCP port for audio is set to 5559.

The ports can be changed to values between 1025 and 65535. The RTP port must be an even number and the RTCP port is the RTP port number plus one, and thus is always an odd number. When the RTP port changes, the RTCP port will change accordingly.

If the RTP ports are incorrectly assigned, the following warning message will be displayed:

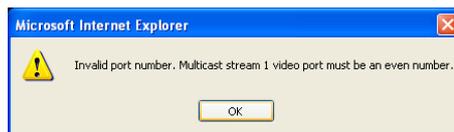

Multicast settings for stream 1, 2, 3, and 4: Click the items to display the detailed configuration information. Select the Always multicast option to enable multicast for video streams.

<p>▼ Multicast settings for stream 1</p> <p><input type="checkbox"/> Always multicast</p> <p>Multicast group address: <input type="text" value="239.128.1.99"/></p> <p>Multicast video port: <input type="text" value="5560"/></p> <p>Multicast RTCP video port: <input type="text" value="5561"/></p> <p>Multicast metadata port: <input type="text" value="6560"/></p> <p>Multicast RTCP metadata port: <input type="text" value="6561"/></p> <p>Multicast audio port: <input type="text" value="5562"/></p> <p>Multicast RTCP audio port: <input type="text" value="5563"/></p> <p>Multicast TTL [1~255]: <input type="text" value="15"/></p>	<p>▼ Multicast settings for stream 3</p> <p><input type="checkbox"/> Always multicast</p> <p>Multicast group address: <input type="text" value="239.128.1.101"/></p> <p>Multicast video port: <input type="text" value="5568"/></p> <p>Multicast RTCP video port: <input type="text" value="5569"/></p> <p>Multicast metadata port: <input type="text" value="6568"/></p> <p>Multicast RTCP metadata port: <input type="text" value="6569"/></p> <p>Multicast audio port: <input type="text" value="5570"/></p> <p>Multicast RTCP audio port: <input type="text" value="5571"/></p> <p>Multicast TTL [1~255]: <input type="text" value="15"/></p>
<p>▼ Multicast settings for stream 2</p> <p><input type="checkbox"/> Always multicast</p> <p>Multicast group address: <input type="text" value="239.128.1.100"/></p> <p>Multicast video port: <input type="text" value="5564"/></p> <p>Multicast RTCP video port: <input type="text" value="5565"/></p> <p>Multicast metadata port: <input type="text" value="6564"/></p> <p>Multicast RTCP metadata port: <input type="text" value="6565"/></p> <p>Multicast audio port: <input type="text" value="5566"/></p> <p>Multicast RTCP audio port: <input type="text" value="5567"/></p> <p>Multicast TTL [1~255]: <input type="text" value="15"/></p>	<p>▼ Multicast settings for stream 4</p> <p><input type="checkbox"/> Always multicast</p> <p>Multicast group address: <input type="text" value="239.128.1.102"/></p> <p>Multicast video port: <input type="text" value="5572"/></p> <p>Multicast RTCP video port: <input type="text" value="5573"/></p> <p>Multicast metadata port: <input type="text" value="6572"/></p> <p>Multicast RTCP metadata port: <input type="text" value="6573"/></p> <p>Multicast audio port: <input type="text" value="5574"/></p> <p>Multicast RTCP audio port: <input type="text" value="5575"/></p> <p>Multicast TTL [1~255]: <input type="text" value="15"/></p>

Unicast video transmission delivers a stream through point-to-point transmission; multicast, on the other hand, sends a stream to the multicast group address and allows multiple clients to acquire the stream at the same time by requesting a copy from the multicast group address. Therefore, enabling multicast can effectively save Internet bandwidth.

The ports can be changed to values between 1025 and 65535. The multicast RTP port must be an even number and the multicast RTCP port number is the multicast RTP port number plus one, and thus is always odd. When the multicast RTP port changes, the multicast RTCP port will change accordingly.

If the multicast RTP video ports are incorrectly assigned, the following warning message will be displayed:

Multicast TTL [1~255]: The multicast TTL (Time To Live) is the value that tells the router the range a packet can be forwarded.

Initial TTL	Scope
0	Restricted to the same host
1	Restricted to the same subnetwork
32	Restricted to the same site
64	Restricted to the same region
128	Restricted to the same continent
255	Unrestricted in scope

⚠ IMPORTANT:

The Multicast metadata port is utilized by VIVOTEK VADP modules to transfer video analytics results, PTZ stream, textual data, and event messages between the camera and the client side running and observing the video analysis. If your client side computer is located outside the local network, you may need to open the associated TCP port on routers and firewall.

SIP

SIP is short for Session Initiation Protocol. If necessary, you can change the default port number, 5060, to one between 1025 and 65535.

Two way audio port:

The Network Camera supports two way audio communication so that operators can transmit and receive audio simultaneously. By using the Network Camera's built-in or external microphone and an external speaker, you can communicate with people around the Network Camera.

Note that as JPEG only transmits a series of JPEG images to the client, to enable the two-way audio function, make sure the video mode is set to H.264 or H.265 on the Media > Video > Stream settings page and the media option is set to "Media > Video > Stream settings" on the Client Settings page. Please refer to Client Settings on page 44 and Stream settings on page 71.

Audio is being transmitted to the Network Camera

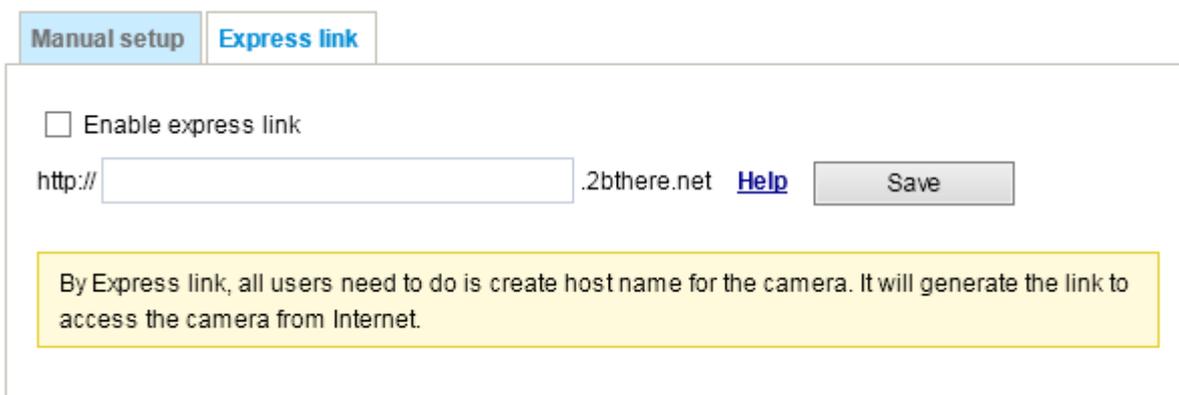

Click  to enable audio transmission to the Network Camera; click  to adjust the volume of microphone; click  to turn off the audio. To stop talking, click  again.

Network > DDNS

This section explains how to configure the dynamic domain name service for the Network Camera. DDNS is a service that allows your Network Camera, especially when assigned with a dynamic IP address, to have a fixed host and domain name.

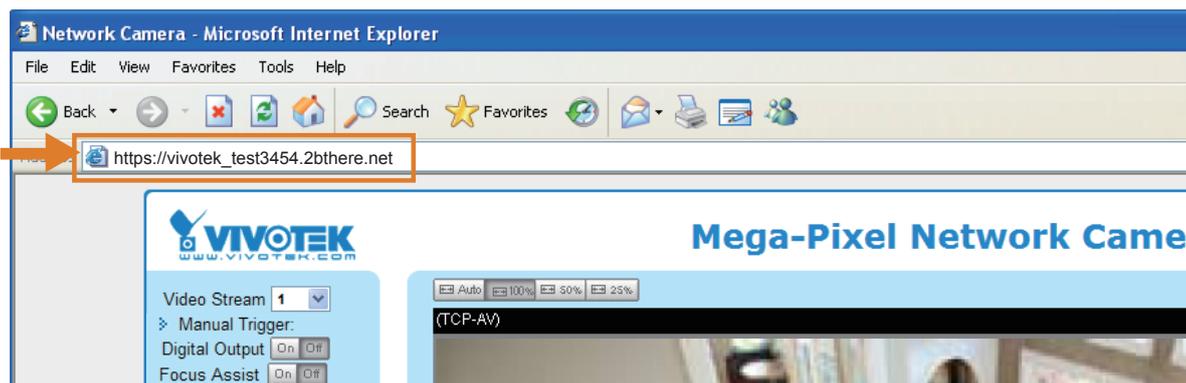

Express link

Express Link is a free service provided by VIVOTEK server, which allows users to register a domain name for a network device. One URL can only be mapped to one MAC address. This service will examine if the host name is valid and automatically open a port on your router. If using DDNS, the user has to manually configure UPnP port forwarding. Express Link is more convenient and easier to set up.

Please follow the steps below to enable Express Link:

1. Make sure that your router supports UPnP port forwarding and it is activated.
2. Check **Enable express link**.
3. Enter a host name for the network device and click **Save**. If the host name has been used by another device, a warning message will show up. If the host name is valid, it will display a message as shown below.

Manual setup

DDNS: Dynamic domain name service

DDNS: Dynamic domain name service

Enable DDNS:

Provider: Dyndns.org(Dynamic) ▼

Host name:

User name:

Password:

Enable DDNS: Select this option to enable the DDNS setting.

Provider: Select a DDNS provider from the provider drop-down list.

VIVOTEK offers **Safe100.net**, a free dynamic domain name service, to VIVOTEK customers. It is recommended that you register **Safe100.net** to access VIVOTEK's Network Cameras from the Internet. Additionally, we offer other DDNS providers, such as Dyndns.org(Dynamic), Dyndns.org(Custom), CustomSafe100, dyn-interfree.it.

Note that before utilizing this function, please apply for a dynamic domain account first.

■ Safe100.net

- In the DDNS column, select **Safe100.net** from the drop-down list. Click **I accept** after reviewing the terms of the Service Agreement.
- In the Register column, fill in the Host name (xxxx.safe100.net), Email, Key, and Confirm Key, and click **Register**. After a host name has been successfully created, a success message will be displayed in the DDNS Registration Result column.

Register

Host name: WTK.safe100.net

Email: wtk@vivotek.com

Key: ••••

Confirm key: ••••

To apply for a domain name for the camera, or to modify the previously registered information, fill in the following fields and then click "Register".

DDNS Registration Result:

[Register] Successfully Your account information has been mailed to registered e-mail address

Upon successful registration, you can click copy to automatically upload relevant information to the DDNS form or you can manually fill it in. Then, click "Save" to save new settings.

- Click **Copy** and all the registered information will automatically be uploaded to the corresponding fields in the DDNS column at the top of the page as seen in the picture.

DDNS: Dynamic domain name service

Enable DDNS:

Provider:

Host name: [*.safe100.net]

Email:

Key:

Register

Host name:

Email:

Key:

Confirm key:

To apply for a domain name for the camera, or to modify the previously registered information, fill in the following fields and then click "Register".

DDNS Registration Result:

Upon successful registration, you can click [copy](#) to automatically upload relevant information to the DDNS form or you can manually fill it in. Then, click "Save" to save new settings.

4. Select Enable DDNS and click **Save** to enable the setting.

■ CustomSafe100

VIVOTEK offers documents to establish a CustomSafe100 DDNS server for distributors and system integrators. You can use CustomSafe100 to register a dynamic domain name if your distributor or system integrators offer such services.

1. In the DDNS column, select CustomSafe100 from the drop-down list.
2. In the Register column, fill in the Host name, Server name, Email, Key, and Confirm Key; then click **Register**. After a host name has been successfully created, you will see a success message in the DDNS Registration Result column. Enter **ns1.safe100.net** as the Server name.
3. Click **Copy** and all for the registered information will be uploaded to the corresponding fields in the DDNS column.
4. Select Enable DDNS and click **Save** to enable the setting.

Forget key: Click this button if you have forgotten the key to Safe100.net or CustomSafe100. Your account information will be sent to your email address.

Refer to the following links to apply for a dynamic domain account when selecting other DDNS providers:

- [Dyndns.org\(Dynamic\) / Dyndns.org\(Custom\)](http://www.dyndns.org): visit <http://www.dyndns.com/>

Network > QoS (Quality of Service)

Quality of Service refers to a resource reservation control mechanism, which guarantees a certain quality to different services on the network. Quality of service guarantees are important if the network capacity is insufficient, especially for real-time streaming multimedia applications. Quality can be defined as, for instance, a maintained level of bit rate, low latency, no packet dropping, etc.

The following are the main benefits of a QoS-aware network:

- The ability to prioritize traffic and guarantee a certain level of performance to the data flow.
- The ability to control the amount of bandwidth each application may use, and thus provide higher reliability and stability on the network.

Requirements for QoS

To utilize QoS in a network environment, the following requirements must be met:

- All network switches and routers in the network must include support for QoS.
- The network video devices used in the network must be QoS-enabled.

QoS models

CoS (the VLAN 802.1p model)

IEEE802.1p defines a QoS model at OSI Layer 2 (Data Link Layer), which is called CoS, Class of Service. It adds a 3-bit value to the VLAN MAC header, which indicates the frame priority level from 0 (lowest) to 7 (highest). The priority is set up via a web console with the network switches, which then use different queuing disciplines to forward the packets.

Below is the setting column for CoS. Enter the **VLAN ID** of your switch (0~4095) and choose the priority for each application (0~7).

CoS

Enable CoS

VLAN ID:	<input style="width: 60px;" type="text" value="1"/>
Live video:	<input style="width: 60px;" type="text" value="0"/> ▼
Live audio:	<input style="width: 60px;" type="text" value="0"/> ▼
Event/Alarm:	<input style="width: 60px;" type="text" value="0"/> ▼
Management:	<input style="width: 60px;" type="text" value="0"/> ▼

If you assign Video the highest level, the switch will handle video packets first.

NOTE:

- ▶ A VLAN Switch (802.1p) is required. Web browsing may fail if the CoS setting is incorrect.
- ▶ Class of Service technologies do not guarantee a level of service in terms of bandwidth and delivery time; they offer a "best-effort." Users can think of CoS as "coarsely-grained" traffic control and QoS as "finely-grained" traffic control.
- ▶ Although CoS is simple to manage, it lacks scalability and does not offer end-to-end guarantees since it is based on L2 protocol.

QoS/DSCP (the DiffServ model)

DSCP-ECN defines QoS at Layer 3 (Network Layer). The Differentiated Services (DiffServ) model is based on packet marking and router queuing disciplines. The marking is done by adding a field to the IP header, called the DSCP (Differentiated Services Codepoint). This is a 6-bit field that provides 64 different class IDs. It gives an indication of how a given packet is to be forwarded, known as the Per Hop Behavior (PHB). The PHB describes a particular service level in terms of bandwidth, queueing theory, and dropping (discarding the packet) decisions. Routers at each network node classify packets according to their DSCP value and give them a particular forwarding treatment; for example, how much bandwidth to reserve for it.

Below are the setting options of DSCP (DiffServ Codepoint). Specify the DSCP value for each application (0~63).

QoS/DSCP

Enable QoS/DSCP

Live video:

Network > SNMP (Simple Network Management Protocol)

This section explains how to use the SNMP on the network camera. The Simple Network Management Protocol is an application layer protocol that facilitates the exchange of management information between network devices. It helps network administrators to remotely manage network devices and find, solve network problems with ease.

■ The SNMP consists of the following three key components:

1. Manager: Network-management station (NMS), a server which executes applications that monitor and control managed devices.
2. Agent: A network-management software module on a managed device which transfers the status of managed devices to the NMS.
3. Managed device: A network node on a managed network. For example: routers, switches, bridges, hubs, computer hosts, printers, IP telephones, network cameras, web server, and database.

Before configuring SNMP settings on the this page, please enable your NMS first.

SNMP Configuration

Enable SNMPv1, SNMPv2c

Select this option and enter the names of Read/Write community and Read Only community according to your NMS settings.

Enable SNMPv1, SNMPv2c

SNMPv1, SNMPv2c Settings

Read/Write community:

Read only community:

Enable SNMPv3

This option contains cryptographic security, a higher security level, which allows you to set the Authentication password and the Encryption password.

- Security name: According to your NMS settings, choose Read/Write or Read Only and enter the community name.
- Authentication type: Select MD5 or SHA as the authentication method.
- Authentication password: Enter the password for authentication (at least 8 characters).
- Encryption password: Enter a password for encryption (at least 8 characters).

Enable SNMPv3

Encryption Password:

Network > FTP

The newer firmware disabled the FTP port for security concerns. You can manually enable the FTP server service to enable the FTP function. You can disable the FTP server function when it is not in use.

FTP port: The FTP server allows the user to save recorded video clips. You can utilize VIVOTEK's Shepherd utility to upgrade the firmware via FTP server. By default, the FTP port is set to 21. It can also be assigned to another port number between 1025 and 65535.

Tips:

You can FTP the camera's IP address to download videos recorded in the SD card, or use the "<http://ip/cgi-bin/admin/lscrtl.cgi?cmd=search>" command to examine the recorded files on your SD card.

Security > User accounts

This section explains how to enable password protection and create multiple accounts.

Account management

Security > User accounts

Account management | Privilege management

--New user--

User name:

User password: ■ ■ ■ *Medium*

* At least 8 characters with no space, one alphabet character and one numeric character

Confirm user password:

Privilege:

The administrator account name is “root”, which is permanent and can not be deleted. If you want to add more accounts in the Account management window, please apply the password for the “root” account first.

The administrator can create up to 20 user accounts.

To create a new user,

1. Click to unfold the pull-down menu. Select **New user**.
2. Enter the new user’s name and password. Type the password identically in both text boxes.
Some, but not all special ASCII characters are supported: !, \$, %, -, ., @, ^, _, and ~.
You can use them in the password combination.

The strength of your password combination is shown on the right, use the combination of alphabetic, numeric, upper case, and lower case characters until the password strength is good enough.

3. Select the privilege level for the new user account. Click **Add** to enable the setting.
The privilege levels are listed below:

Administrator	Full control
Operator	Control DO, white-light illuminator, snapshot, and PTZ; unable to enter the camera Configuration page.
Viewer	Control DO, white-light illuminator, view, listen, PTZ, and talk through the camera interface.

Access rights are sorted by user privilege (Administrator, Operator, and Viewer). Only administrators can access the Configuration page. Although operators cannot access the Configuration page, they can use the URL Commands to get and set the value of parameters. For more information, please refer to URL Commands of the Network Camera on page 157. Viewers can only access the main page for live viewing.

Here you also can change a user’s access rights or delete user accounts.

1. Select an existing account to modify.
2. Make necessary changes and click **Update** or **Delete** to enable the setting.

Privilege management

Account management	Privilege management	
<input type="checkbox"/> Allow anonymous viewing		
Operator:	<input checked="" type="checkbox"/> Digital output	<input checked="" type="checkbox"/> PTZ control
Viewer:	<input type="checkbox"/> Digital output	<input checked="" type="checkbox"/> PTZ control
<input type="button" value="Save"/>		

Digital Output & PTZ control: You can modify the management privilege as operators or viewers. Select or de-select the checkboxes, and then click **Save** to enable the settings. If you give Viewers the privilege, Operators will also have the ability to control the Network Camera through the main page. (Please refer to Configuration on page 36).

Allow anonymous viewing: If you select this item, any client can access the live stream without entering a User ID and Password.

Security > HTTPS (Hypertext Transfer Protocol over SSL)

This section explains how to enable authentication and encrypted communication over SSL (Secure Socket Layer). It helps protect streaming data transmission over the Internet on higher security level.

Create and Install Certificate Method

Before using HTTPS for communication with the Network Camera, a **Certificate** must be created first. There are three ways to create and install a certificate:

Create self-signed certificate

1. Select this option from a pull-down menu.
2. In the first column, select **Enable HTTPS secure connection**, then select a connection option: "HTTP & HTTPS" or "HTTPS only".
3. Click **Create certificate** to generate a certificate.

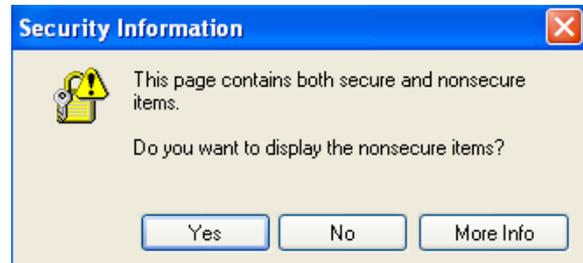

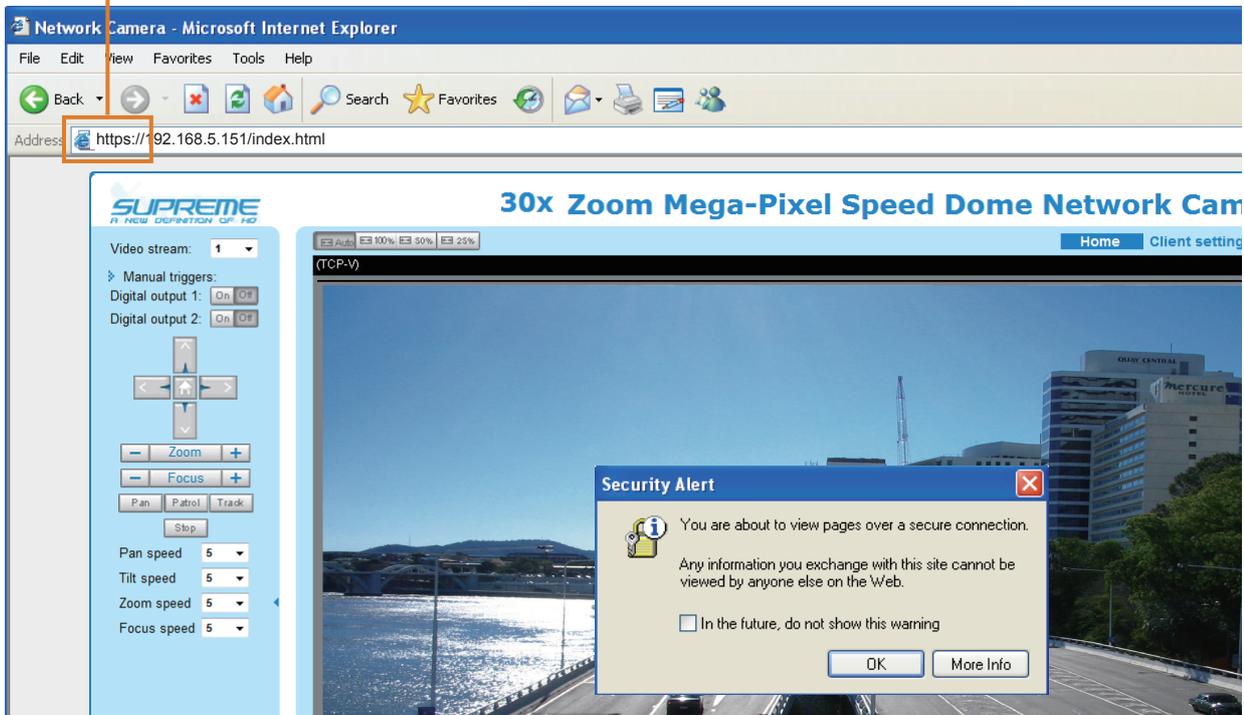

The screenshot shows the 'HTTPS' configuration page. The 'Enable HTTPS secure connection' checkbox is checked. Under 'Mode', 'HTTP & HTTPS' is selected. Under 'Certificate', 'Create self-signed certificate' is chosen from a dropdown menu. The 'Certificate information' section contains the following fields: Status (Not installed), method (Create self-signed certificate), Country (TW), State or province (Asia), Locality (Asia), Organization (VIVOTEK.Inc), Organization unit (VIVOTEK.Inc), Common name (www.vivotek.com), and Validity (3650 days). A modal dialog box is overlaid on the form, displaying 'Please wait while the certificate is being generated...' with a progress bar. The 'Create certificate' button at the bottom right of the form is highlighted with an orange rectangular box.

4. The Certificate Information will automatically be displayed as shown below. You can click **Certificate properties** to view detailed information about the certificate.

The screenshot shows the 'Certificate information' panel. The status is 'Active'. The details are: method (Create self-signed certificate), Country (TW), State or province (Asia), Locality (Asia), Organization (VIVOTEK.Inc), Organization unit (VIVOTEK.Inc), and Common name (www.vivotek.com). At the bottom, there is a link for 'Certificate properties' and a 'Remove certificate' button.

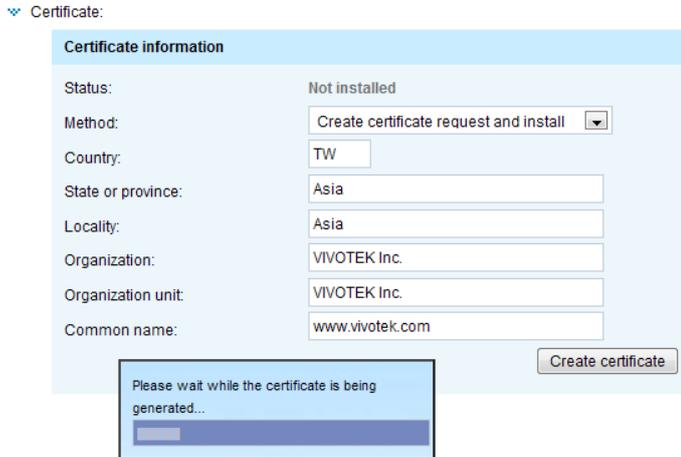

5. Click **Save** to preserve your configuration, and your current session with the camera will change to the encrypted connection.
6. If your web session does not automatically change to an encrypted HTTPS session, click **Home** to return to the main page. Change the URL address from “<http://>” to “<https://>” in the address bar and press **Enter** on your keyboard. Some Security Alert dialogs will pop up. Click **OK** or **Yes** to enable HTTPS.

https://

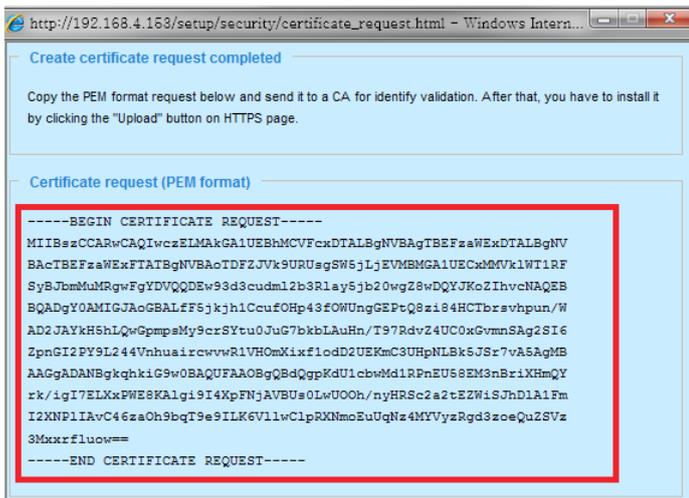

Create certificate request and install

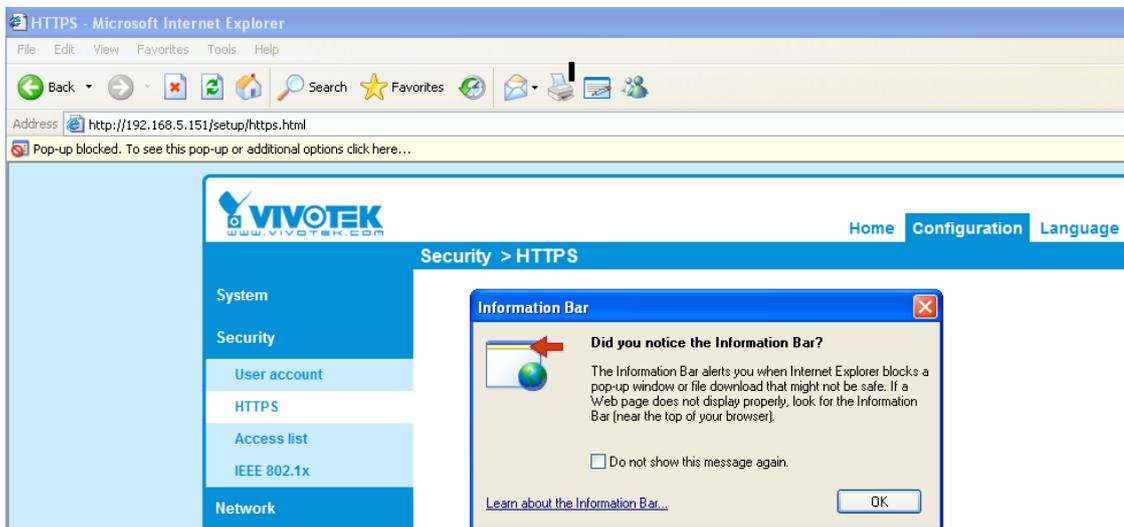

1. Select the option from the **Method** pull-down menu.
2. Click **Create certificate** to proceed.
3. The following information will show up in a pop-up window after clicking **Create**. Then click **Save** to generate the certificate request.

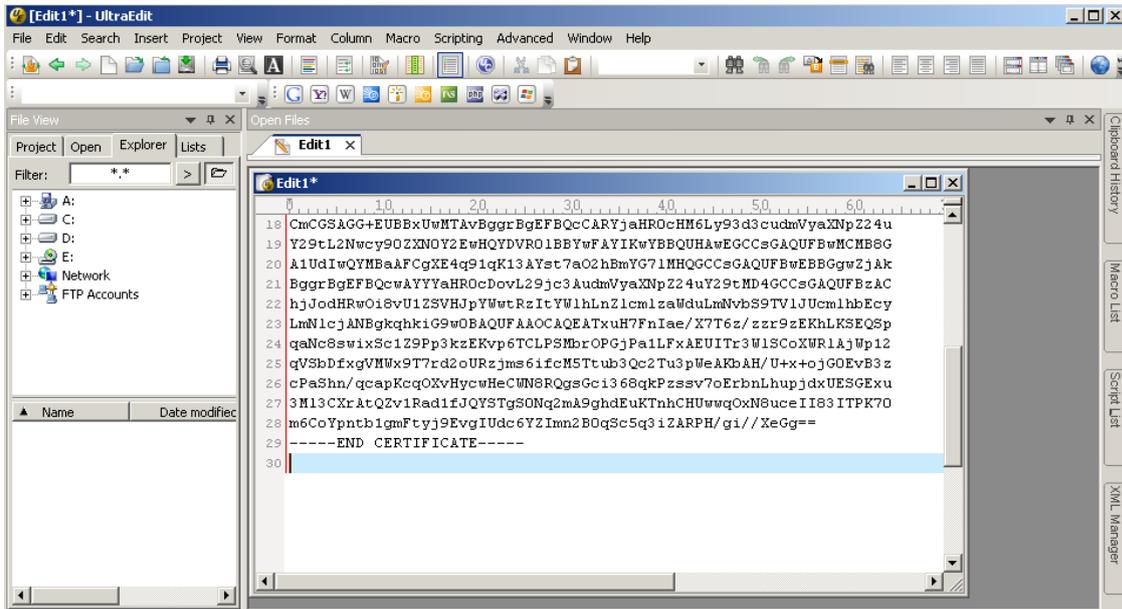

4. The Certificate request window will prompt.

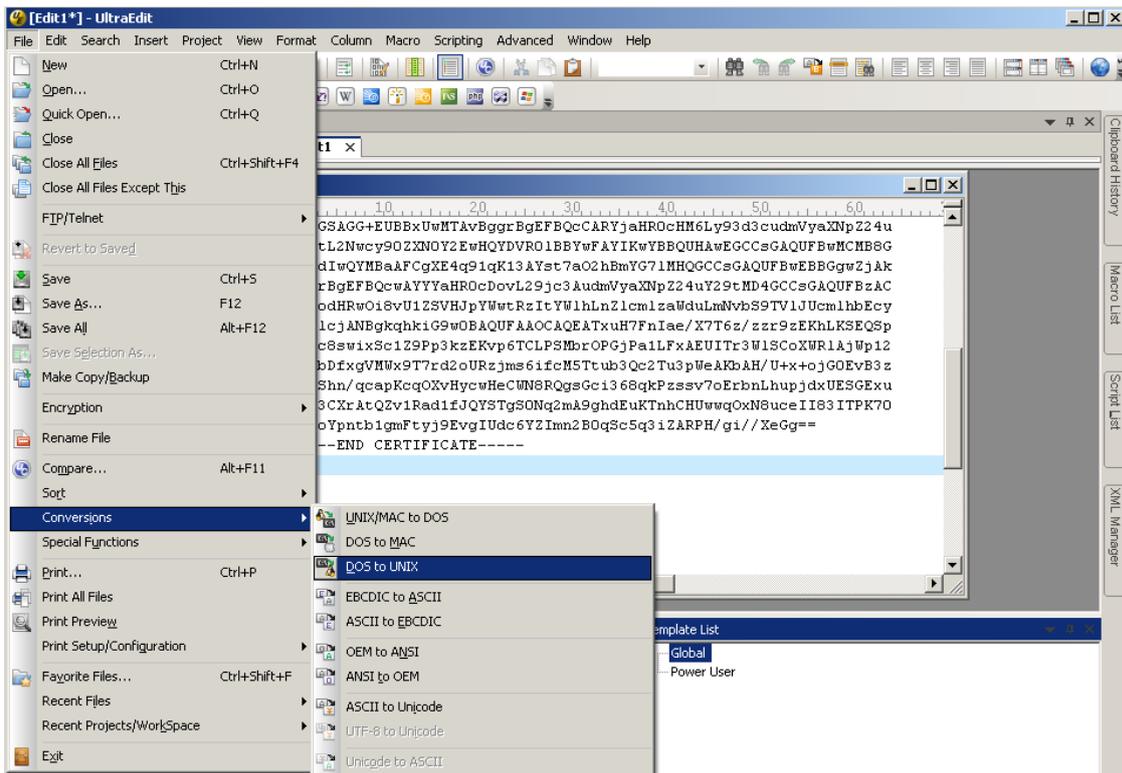

If you see the following Information bar, click **OK** and click on the Information bar at the top of the page to allow pop-ups.

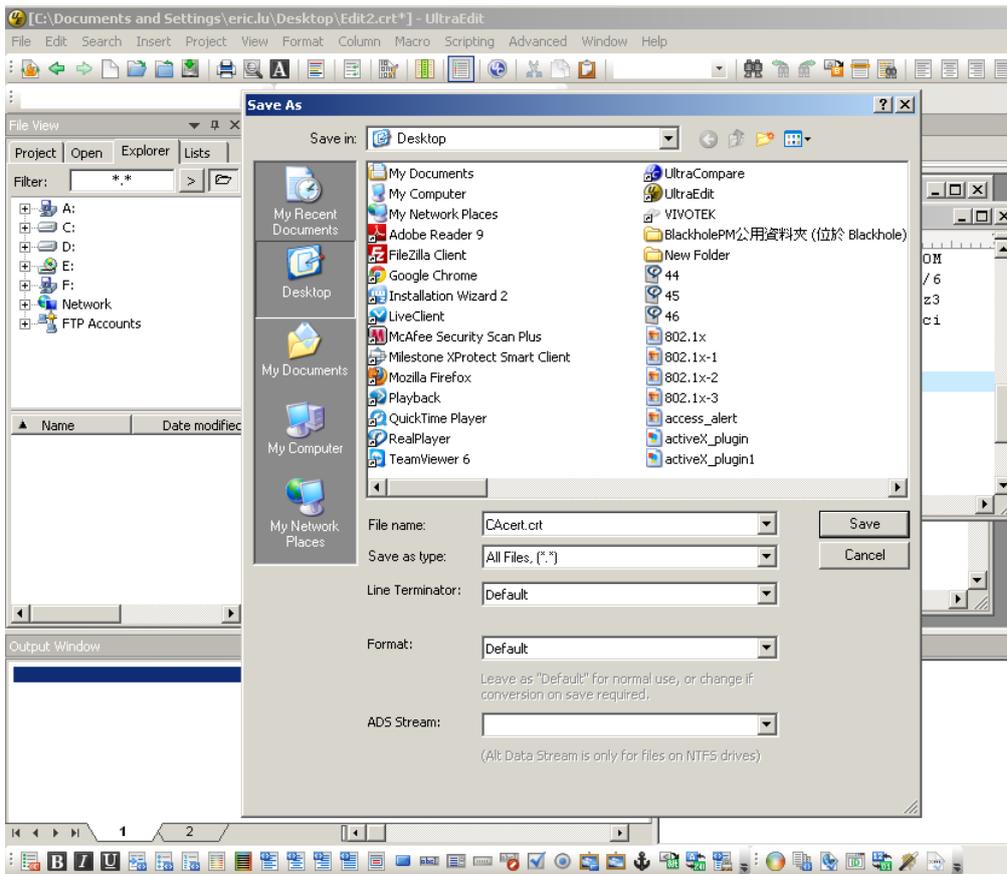

- Open a new edit, paste the certificate contents, and press ENTER at the end of the contents to add an empty line.

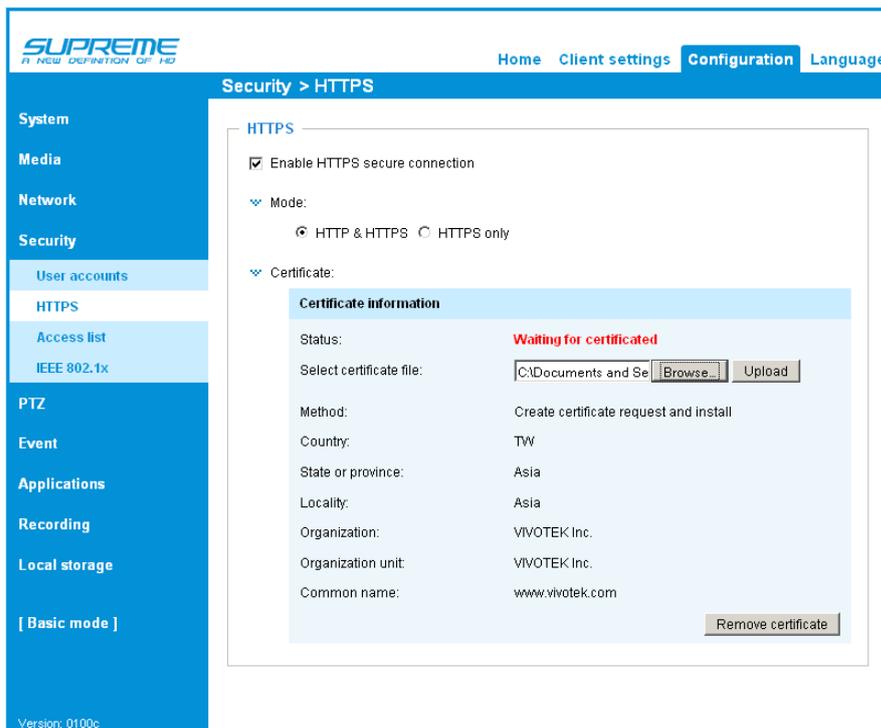

- Convert file format from DOS to UNIX. Open File menu > Conversions > DOS to Unix.

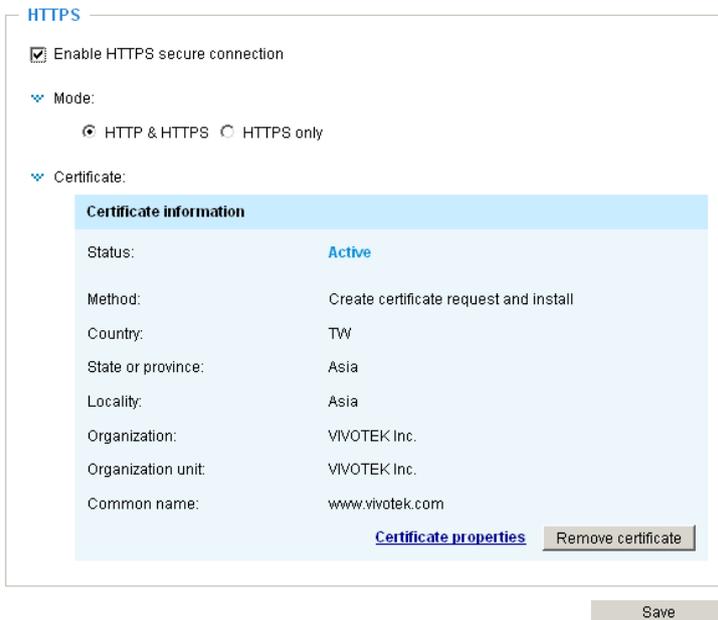

9. Save the edit using the “.crt” extension, using a file name like “CAcert.crt.”

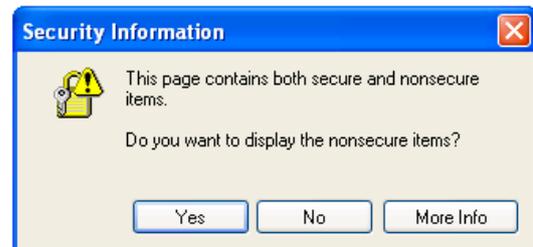

10. Return to the original firmware session, use the **Browse** button to locate the crt certificate file, and click **Upload** to enable the certification.

11. When the certificate file is successfully loaded, its status will be stated as **Active**. Note that a certificate must have been created and installed before you can click on the **“Save”** button for the configuration to take effect.

12. To begin an encrypted HTTPS session, click **Home** to return to the main page. Change the URL address from **“http://”** to **“https://”** in the address bar and press **Enter** on your keyboard. Some Security Alert dialogs will pop up. Click **OK** or **Yes** to enable HTTPS.

Security > Access List

This section explains how to control access permission by verifying the client PC's IP address.

General Settings

General settings

Maximum number of concurrent streaming: 10

Maximum number of concurrent streaming connection(s) limited to: Simultaneous live viewing for 1~10 clients (including all streams). The default value is 10. If you modify the value and click **Save**, all current connections will be disconnected and automatically attempt to re-link (IE Explorer or Quick Time Player).

Connection management: Click this button to display the connection status window showing a list of the current connections. For example:

	IP address	Elapsed time	User ID
<input type="checkbox"/>	192.168.1.147	12:20:34	root
<input type="checkbox"/>	61.22.15.3	00:10:09	
<input type="checkbox"/>	192.168.3.25	45:00:34	greg

- IP address: Current connections to the Network Camera.
- Elapsed time: How long the client has been at the live view webpage (note that only clients currently at the live view window will be listed here).
- User ID: If the administrator has set a password for the webpage, the clients have to enter a user name and password to access the live video. The user name will be displayed in the User ID column. If the administrator allows clients to make a connection without a user name and password, the User ID column will be empty.

There are some situations which allow clients access to the live video without a user name and password:

1. The administrator does not set up a root password. For more information about how to set up a root password and manage user accounts, please refer to Security > User account on page 100.
2. The administrator has set up a root password, but set **RTSP Authentication** to "disable". For more information about **RTSP Authentication**, please refer to RTSP Streaming on page 88.
3. The administrator has set up a root password, but allows anonymous viewing. For more information about **Allow Anonymous Viewing**, please refer to page 100.

- Refresh: Click this button to refresh all current connections.
- Add to deny list: You can select entries from the Connection Status list and add them to the Deny List to deny their access. Please note that those checked connections will only be disconnected temporarily and they will automatically retry a connection (IE Explorer or Quick Time Player). If you want to enable the denied list, please check **Enable access list filtering** and click **Save** in the first column.

- **Disconnect:** If you want to break off the current connections, please select them and click this button. Please note that those checked connections will only be disconnected temporarily and they will automatically retry a connection (IE Explore or Quick Time Player).

Enable access list filtering: Check this item and click **Save** if you want to enable the access list filtering function.

Filter

Filter type: Select **Allow** or **Deny** as the filter type. If you choose **Allow Type**, only those clients whose IP addresses are on the Access List below can access the Network Camera, and exclude the access from those that are not on the list. If you choose **Deny Type**, those clients whose IP addresses are on the Access List below will not be allowed to access the Network Camera, while those that are not on the list can.

Filter

Filter type: Allow Deny

Then you can **Add** a rule to the following Access List. Please note that the IPv6 access list column will not be displayed unless you enable IPv6 on the Network page. For more information about **IPv6 Settings**, please refer to Network > Enable IPv6 on page 84 for detailed information.

Filter

Filter type: Allow Deny

IPv4 access list

IPv6 access list

There are three types of rules:

Single: This rule allows the user to add an IP address to the Allowed/Denied list.

For example:

Filter address

Rule: ▼

IP address:

Network: This rule allows the user to assign a network address and corresponding subnet mask to the Allow/Deny List in the CIDR format, e.g. 192.168.xx.xx/24.
For example:

Filter address

Rule: Network ▾

Network address / Network mask: 192.168.2.0 / 24

OK Cancel

IP address 192.168.2.x will be blocked.

Range: This rule allows the user to assign a range of IP addresses to the Allow/Deny List.
Note: This rule is only applicable to IPv4 addresses.
For example:

Filter address

Rule: Range ▾

IP address - IP address: 192.168.2.0 - 192.168.2.255

OK Cancel

Administrator IP address

Always allow the IP address to access this device: You can check this item and add the Administrator's IP address in this field to make sure the Administrator can always connect to the device.

Administrator IP address

Always allow the IP address to access this device

Save

Security > IEEE 802.1x

Enable this function if your network environment uses IEEE 802.1x, which is a port-based network access control. The network devices, intermediary switch/access point/hub, and RADIUS server must support and have their 802.1x settings enabled.

The 802.1x standard is designed to enhance the security of local area networks, which provides authentication to network devices (clients) attached to a network port (wired or wireless). If all certificates between client and server are verified, a point-to-point connection will be enabled; if authentication fails, access on that port will be prohibited. 802.1x utilizes an existing protocol, the Extensible Authentication Protocol (EAP), to facilitate communication.

- The components of a protected network with 802.1x authentication:

1. Supplicant: A client end user (camera), which requests authentication.
2. Authenticator (an access point or a switch): A “go between” which restricts unauthorized end users from communicating with the authentication server.
3. Authentication server (usually a RADIUS server): Checks the client certificate and decides whether to accept the end user’s access request.

- VIVOTEK Network Cameras support two types of EAP methods to perform authentication: **EAP-PEAP** and **EAP-TLS**.

Please follow the steps below to enable 802.1x settings:

1. Before connecting the Network Camera to the protected network with 802.1x, please apply a digital certificate from a Certificate Authority (i.e., network administrator of your company) which can be validated by a RADIUS server.
2. Connect the Network Camera to a PC or notebook outside of the protected LAN. Open the configuration page of the Network Camera as shown below. Select **EAP-PEAP** or **EAP-TLS** as the EAP method. In the following blanks, enter your ID and password issued by the CA, then upload related certificate(s).

IEEE 802.1x

Enable IEEE 802.1x

EAP method: EAP-PEAP ▼

Identity:

Password:

CA certificate:

Status: no file

IEEE 802.1x

Enable 802.1x

EAP method: EAP-TLS ▾

Identity:

Private key password:

CA certificate:

Status: no file

client certificate:

Status: no file

Client private key:

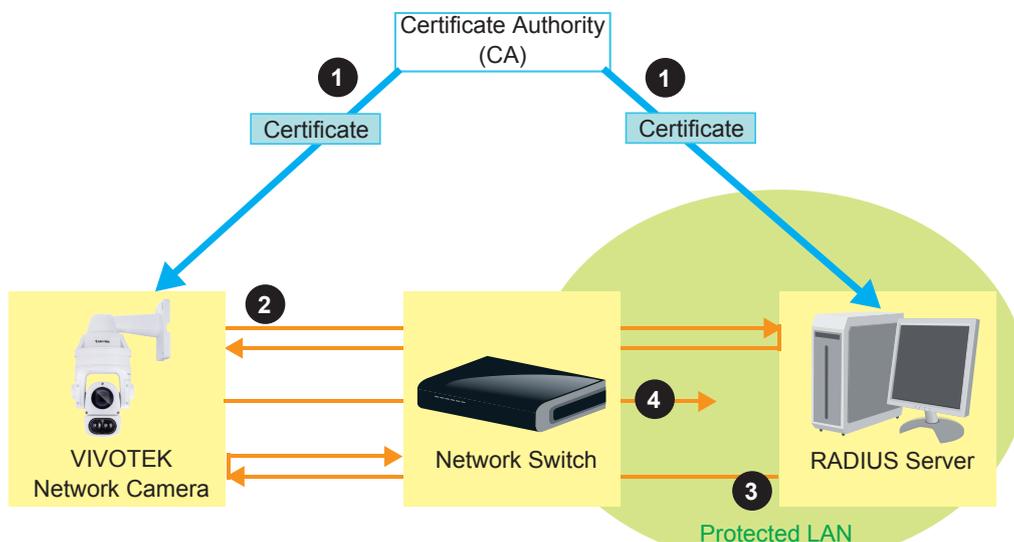

Status: no file

3. When all settings are complete, move the Network Camera to the protected LAN by connecting it to an 802.1x enabled switch. The devices will then start the authentication automatically.

 **NOTE:**

► Below is the authentication process for 802.1x:

1. The Certificate Authority (CA) provides the required signed certificates to the Network Camera (the supplicant) and the RADIUS Server (the authentication server).
2. A Network Camera requests access to the protected LAN using 802.1X via a switch (the authenticator). The client offers its identity and client certificate, which is then forwarded by the switch to the RADIUS Server, which uses an algorithm to authenticate the Network Camera and returns an acceptance or rejection back to the switch.
3. The switch also forwards the RADIUS Server's certificate to the Network Camera.
4. Assuming all certificates are validated, the switch then changes the Network Camera's state to authorized and is allowed access to the protected network via a pre-configured port.

PTZ > PTZ settings

This section explains how to control the Network Camera’s Pan/Tilt/Zoom operation. The camera comes with built-in PTZ mechanisms.

Home location settings

Move your current field of view to a preferred location using the PTZ panel or mouse clicks on the screen, and use the below buttons to configure the current view as the default home position. You can also restore the home position to the factory default, which is approximately 45 degree looking down with the lens lined up with the VIVOTEK logo.

Home location settings

Set current position as home
Restore home position to default

Patrol list

This column displays the configured patrols. Note that only one patrol can apply at a time. Use the ON/OFF buttons to enable/disable an existing patrol.

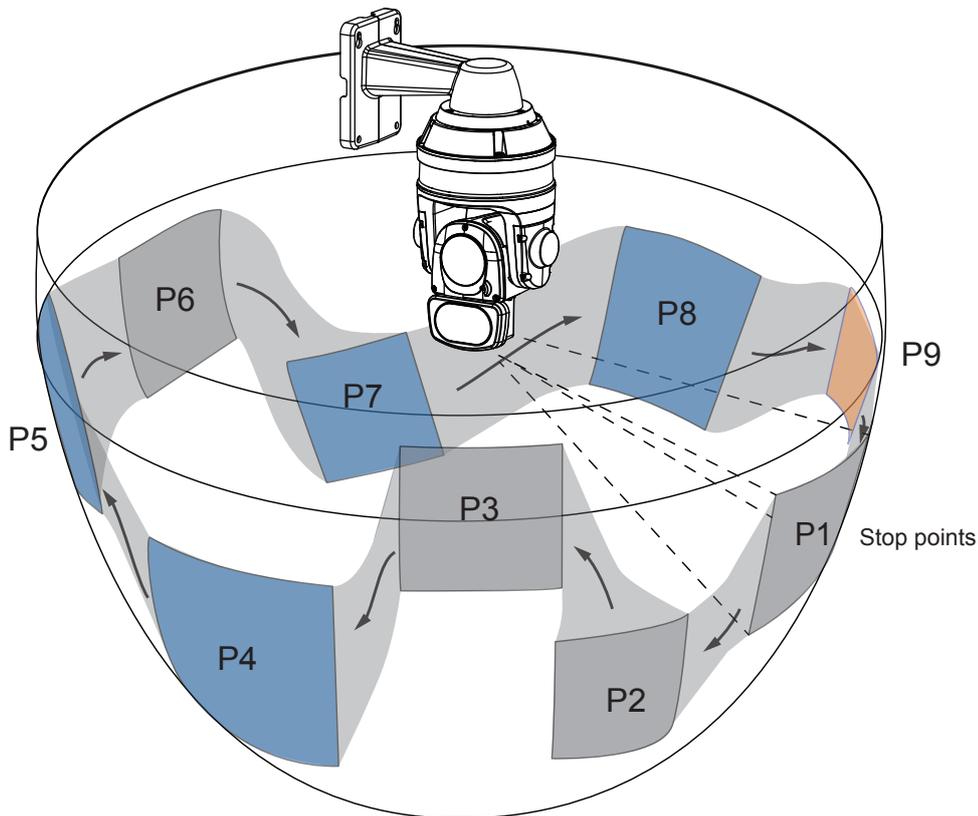

Use the buttons below to create a **recorded patrol** or a **preset patrol**.

Patrol list

Name	Status	Mode	
tour_test	OFF	Recorded	<input type="button" value="Delete"/>
preset_patrol	ON	Preset	<input type="button" value="Delete"/>
preset_patrol2	OFF	Preset	<input type="button" value="Delete"/>

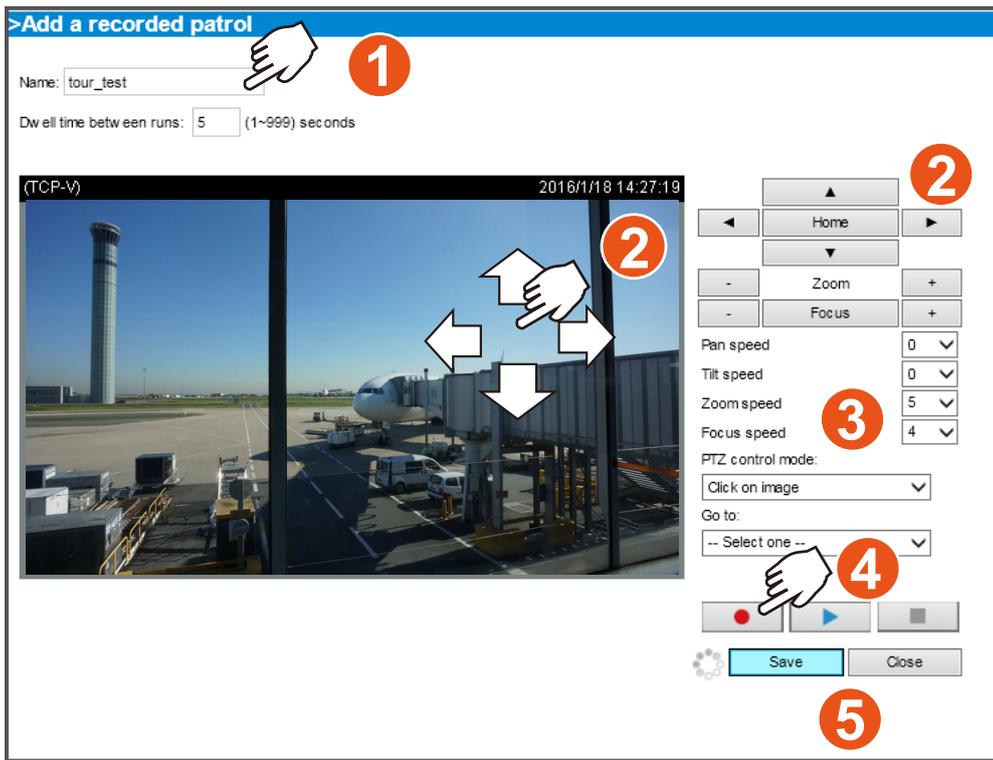

Recorded Patrol

The recorded patrol allows you to record the process moving along interested points (positions) in your surveillance area while the camera memorizes every Pan/Tilt/Zoom/Focus commands you gave in the process. You can then save the process as a recorded patrol. Due to the limitation on system memory, you can configure 4 recorded patrols, each with a length of 2 minutes.

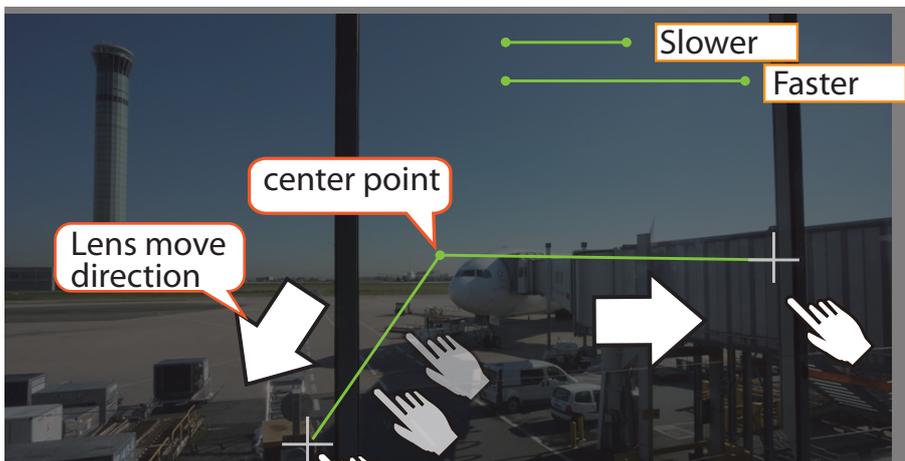

To create a recorded patrol,

1. Enter a name for the patrol.
2. Use mouse clicks or the PTZ panel to select a field of view as your start point.
3. Select the Pan/Tilt/Zoom/Focus speed, and the PTZ control mode.
4. You can then click on the Record button  and start to scan through your surveillance area by moving along and staying at the points of your interest. Click the record button  again to stop the recording when you visited all of your points of interest. Zoom and focus during the process are also supported.
5. You can use the playback button  to review your recorded patrol before you click the Save button. When you are satisfied with the recording, click Save and Close to leave the configuration page. Note that if you start a new recording without saving the previous one, the previous recording will be abandoned.

NOTE:

The Joystick mode simulates joystick control using your mouse. Click and hold down the left mouse button, and move your mouse target cursor to the direction you want. Drag towards the direction you prefer, the lens will move to that direction. You can click and hold down the mouse button to continue scanning.

Preset Patrol

NOTE:

The navigation buttons here also support the continuous move. You can click and hold down the button to move across the screen until you release the button.

Preset positions and patrol settings

In the PTZ settings page, you can configure preset positions for the camera to travel through. A total of 256 preset positions can be configured. 40 of them can be configured into one patrol.

Please follow the steps below to configure preset positions and arrange them in a pan/tilt/zoom tour:

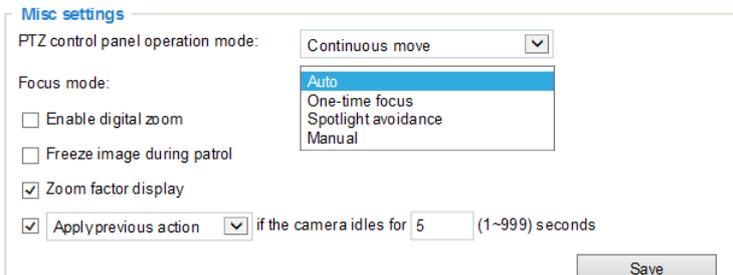

1. Adjust the shooting area to the desired position using the keypad on the upper right side of the window. The default **Home** position refers to the center position defaulted in the factory. You might as well select another area of interest as the “Home” position. You should also select the speeds for the actions that occur during the patrol; i.e., pan, tilt, zoom, focus, and the auto pan/patrol.
2. Enter a name for a new preset position, which can contain up to forty characters. Click **Add** to enable the settings. The preset positions will be listed on the **User preset locations**. (To add positions you wish, please repeat steps 1~2.)
3. Select the preset positions and click on the **Save** button at the bottom of the screen.
4. Click on the move button (>>) >> to move positions to the Patrol locations window.
5. You may select some or all of the imported positions as the stop points during the tour.
6. Enter a preferred dwell time before the camera lens moves to the next position.
7. Select a **speed** level for the **auto patrol tour**.
8. Click on the **Save** button to preserve your configuration.

To remove a preset position from the list, select it and click **Remove**.

You can re-arrange the patrol order of the positions on the list using the   buttons.

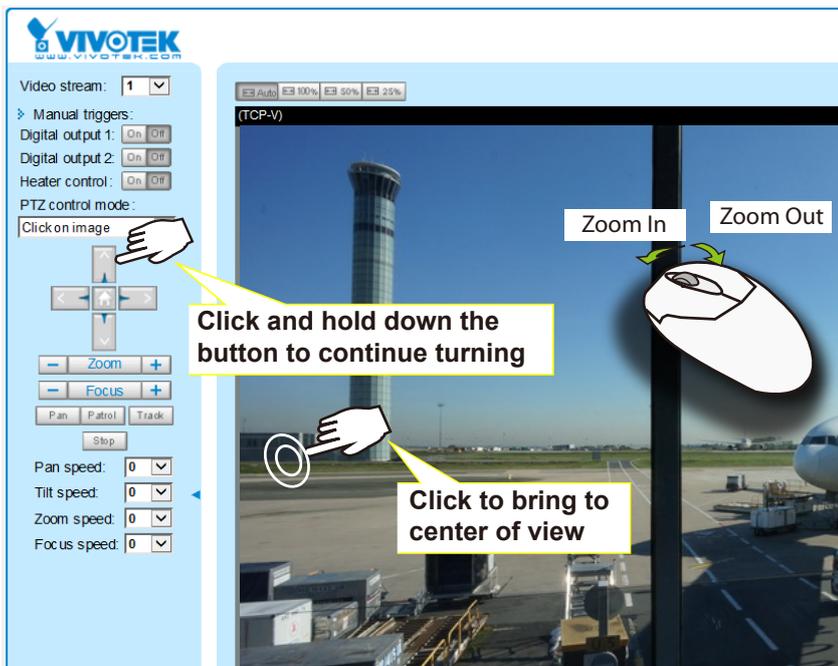

Misc. settings:

Use the checkboxes and the pull-down menus for the camera to automatically resume the previous action or return to the home position after the camera has stayed idle for a period of time.

PTZ control panel operation mode: This determines how your mouse and PTZ control panel works on a live view window.

The **Continuous move** allows your screen control action to continue as long as you click and hold down the left mouse button. For example, if you click on the left button on the PTZ control panel, the camera's view should continuously rotate to the left until you release the button. The same applies to arrow keys, Zoom, and Focus buttons on the PTZ panel. If you select **Click to move**, every single mouse click takes effect for once without the ensuing move.

Note that if your screen control malfunctions, it is possible that the CPU of your current view station can not cope with the HD video feeds or that an incompatibility issue occurred with the ActiveX control plug-ins.

If you select the **Enable digital zoom** checkbox, you will be able to zoom in on an image by up to 960X magnification with the combination of the 30x mechanical zoom and another 12X digital zoom.

Apply previous action if the camera idles for __ (1~999) seconds: You can assign an action to be taken when the camera sits idle for a configurable period time. For example, you can let camera resume a patrol tour. The resumed patrol will continue from the last preset position. You may also let the camera return to the home position. The idle state does not include the situations when the camera is performing pan or patrol action.

Return to home position: When no activities occur after a configurable period of time, let the camera's lens return to the default home position.

Focus mode: This determines how focus takes place when camera lens is ordered to aim at different areas or preset points, or zoom in or out on a scene.

Auto: Firmware automatically adapts to different environments regarding the distances of objects in scene, and generates the best focus results.

One-time focus: Because image blurs can occur during a repeated focusing process, once moved to a scene (a preset point), the camera exerts only one automatic focus in this mode. This applies when users prefer an expected depth of field and prefer the view not to be affected by the continuous focusing acts resulting from moving objects in the scene. The One-time focus applies when using presets and a general imaging result is expected without focusing near and far.

Spotlight avoidance: The Spotlight avoidance mode automatically avoids the interferences of strong light sources such as spotlights in a stadium or road lamp in a dark scene.

Manual: 1. When applied and moved to a position, a manual focus action is required.

2. The second scenario applies to the use of an intelligent video analytics software which may utilize an independent focusing algorithm. If such a 3rd-party software is implemented, none of the above focus modes apply.

If you select the **Enable digital zoom** checkbox, you will be able to zoom in on an image by up to 360X magnification with the combination of the 30x mechanical zoom and another 12X digital zoom.

The **Freeze image during patrol** skips the display of the process when moving from one position to another. Only the views of the preset points are displayed.

Zoom factor display

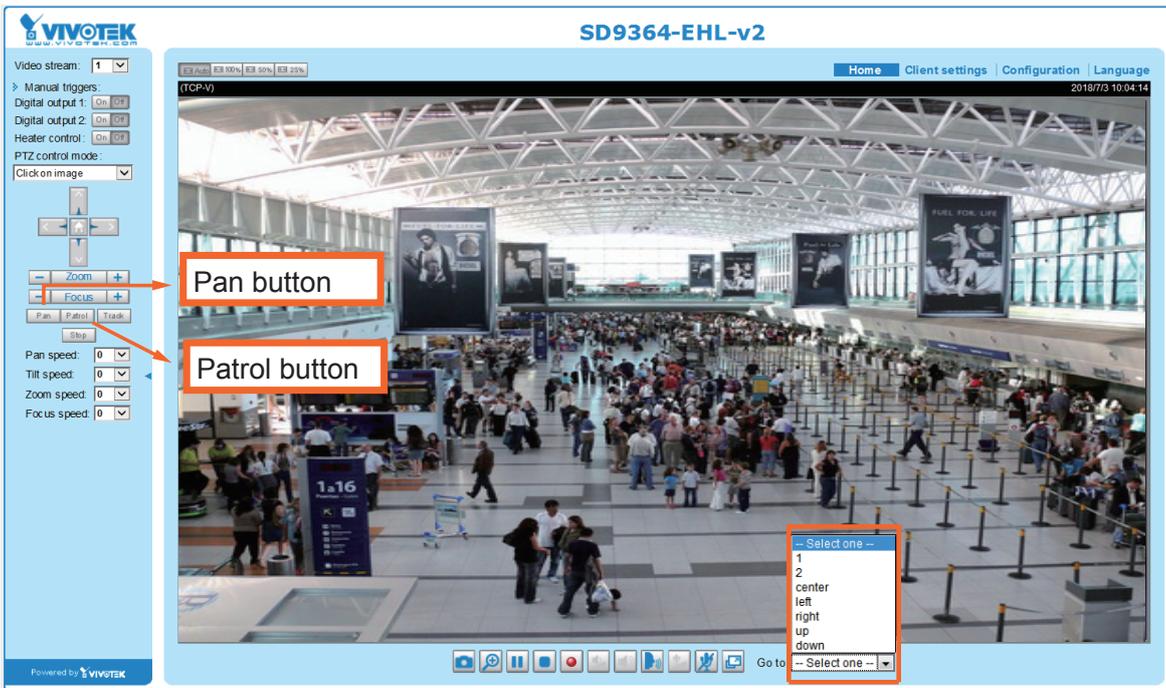

If you check this item, the zoom indicator will be displayed on the home page when you zoom in/out the live viewing window

Positions on the Home page

The **Preset positions** will also be displayed on the home page. Select one from the Go to drop-down list, and the Network Camera will move to the selected position.

Pan button: Click this button to start the 360° horizontal auto pan.

Patrol button: Click this button, then the Network Camera will patrol continuously among the selected positions.

PTZ > Calibrate

This function re-calibrates the home position to the default center to recover any displacement caused by external forces. Please note that there is no confirm message after using the function, and the calibration immediately takes place. If, after a long use, a user finds it is difficult to move camera's field of view to a specific point, use this function to restore the camera's original coordinates in pan and tilt motions.

PTZ > Calibrate

Calibrate

Recalibrate the home position to the default center to recover the tolerance caused by some external forces.

Auto tracking

In this window, you can modify the minimum object size as the triggering factor while performing the Auto Tracking function. You can move the camera view to an area of your interest, estimate, and define the possible size of objects. For example, you can designate the object size such as that of a human trespasser. The silhouette of the trespasser must be larger than the whole of the object size square box. The minimum object size is 30x30 pixels within a 320x420 view window.

Use the slide bar to tune the sensitivity of the tracking function.

This function stops when the user clicks on any buttons on the PTZ panel, or a mouse click takes place on a view window.

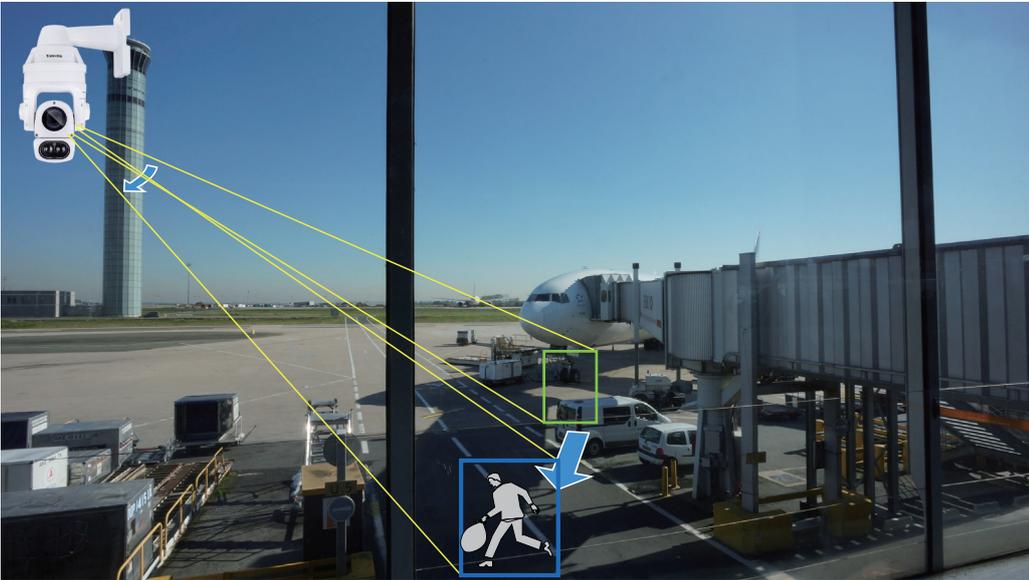

Users can choose to perform other functions, such as pan or patrol, simply by clicking their buttons on the PTZ panel while the camera is performing the auto tracking function.

When Auto Tracking is taking place, a “Tracking” message is displayed on the message bar.

Auto tracking is configured by designating the minimum object size. Moving objects that enter the current region of view will trigger the tracking action.

Auto tracking, if applied, is designed to track an intruder in a place where human traffic is not heavy, such as a warehouse or a load area. Heavy traffic can result in a constant shift of tracked objects, and reduce the effectiveness of the feature.

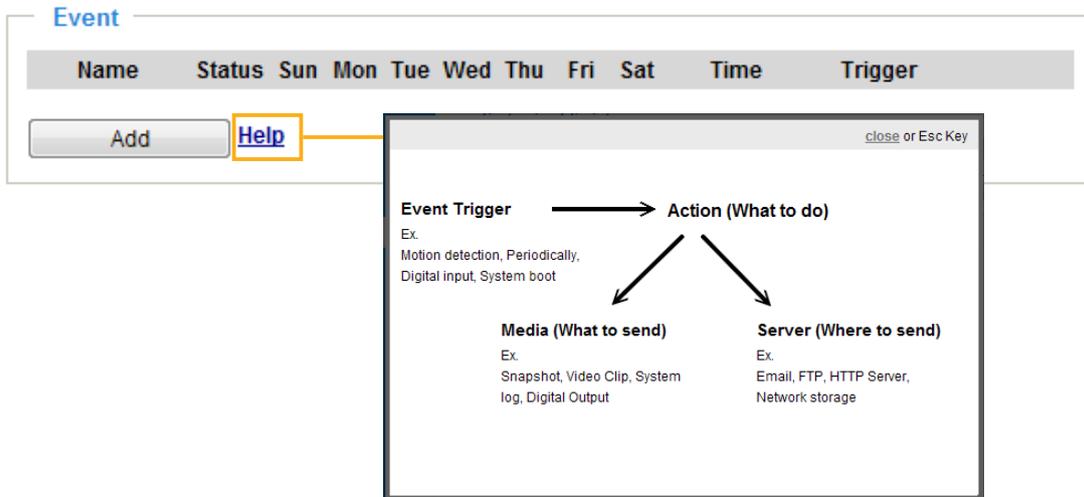

**NOTE:**

The conditions for using this function are listed below:

1. The speed dome can track one object at a time.
2. If multiple objects are present in the FOV, the camera tracks the object that is farthest from the camera.
3. If a tracked object stays motionless for 10 seconds, camera will abandon it and start tracking another object that is farthest away from the center.
4. The zoom-in ratio while tracking is determined by the zoom ratio of the camera lens when the tracking is triggered.
5. Manual control always has a higher priority than Auto tracking, such as using a joystick to pan or tilt or using a click on VAST view cell.
6. Objects can easily move away from an FOV when the zoom-in ratio is high. Therefore, it is recommended not to zoom in too much on where the Auto tracking is expected to take place.

Event > Event settings

This section explains how to configure the Network Camera to respond to particular situations (event). A typical application is that when a motion is detected, the Network Camera sends buffered images to an FTP server or e-mail address as notifications. Click on **Help**, there is an illustration shown in the pop-up window explaining that an event can be triggered by many sources, such as motion detection or external digital input devices. When an event is triggered, you can specify what type of action will be performed.

Event

An event is an action initiated by a user-defined trigger source. In the **Event** column, click **Add** to open the event settings window.

The screenshot shows the 'Event settings' window. At the top is a table with columns: Name, Status, Sun, Mon, Tue, Wed, Thu, Fri, Sat, Time, and Trigger. Below the table are 'Add' and 'Help' buttons. The main configuration area includes:

- Event name:** [Text input field]
- Enable this event
- Priority: [Normal] (dropdown menu)
- Detect next motion detection or digital input after [10] second(s).
- Event schedule**:
 - Days: Sun Mon Tue Wed Thu Fri Sat
 - Time:
 - Always
 - From [00:00] to [24:00] [hh:mm]
- A flowchart on the left shows the process: 1. Schedule → 2. Trigger → 3. Action.
- Buttons at the bottom: Close, Save event.

- **Event name:** Enter a name for the event setting.
- **Enable this event:** Select this option to enable the current event setting.
- **Priority:** Select the relative importance of this event (High, Normal, or Low). Events with a higher priority setting will be executed first.
- **Detect next motion detection or digital input after seconds:** Enter the duration in seconds to pause motion detection after a motion is detected.

Follow the steps 1~3 to arrange the three elements -- Schedule, Trigger, and Action to configure an action to take when an event is triggered. You can configure 3 event-triggered conditions.

1. Schedule

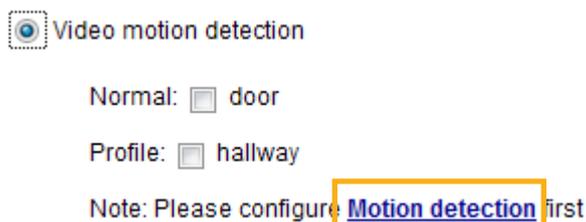

Specify the time span for the event-triggering condition. Please select the days of the week and the time in a day (in 24-hr time format) for the recording schedule.

2. Trigger

This is the cause or stimulus which defines when to trigger the Network Camera. The trigger source can be configured to use the Network Camera's built-in motion detection mechanism or external digital input devices.

There are several choices of trigger sources as shown on next page. Select the item to display the detailed configuration options.

- **Video motion detection**
This option makes use of the built-in motion detection mechanism as a trigger source. To enable this function, you need to configure a Motion Detection Window first. For more information, please refer to Motion Detection on page 138 for details.

- **Periodically**
This option allows the Network Camera to trigger periodically for every other defined minute. Up to 999 minutes are allowed.

- **Digital input**
This option allows the Network Camera to use an external digital input device or sensor as a trigger source. Depending on your application, there are many choices of digital input devices on the market which helps to detect changes in temperature, vibration, sound, and light, etc.
- **System boot**
This option triggers the Network Camera when the power to the Network Camera is disconnected and reconnected.
- **Recording notify**
This option allows the Network Camera to trigger when the recording disk is full or when recording starts to rewrite older data.

■ Audio detection

A preset threshold can be configured with an external microphone as the trigger to system event. The triggering condition can be an input exceeding or falling below a threshold. Audio detection can take place as a complement to motion detection or as a method to detect activities not covered by the camera's view. Please refer to page 141 **Applications > Audio detection** for more details.

Audio detection

Normal: Trigger event when detected audio rises above alarm level

Profile: Trigger event when detected audio rises above alarm level

Note: Please configure [Audio detection](#) first

Once you have a preset audio alarm level, you can define the triggering condition either as an audio input rises above or falls below the alarm level.

■ Camera tampering detection

This option allows the Network Camera to trigger when the camera detects that it is being tampered with. To enable this function, you need to configure the Tampering Detection option first. Please refer to page 142 for detailed information.

Camera tampering detection

Tampering detection Too dark Too bright Too blurry

Note: Please configure [Camera tampering detection](#) first

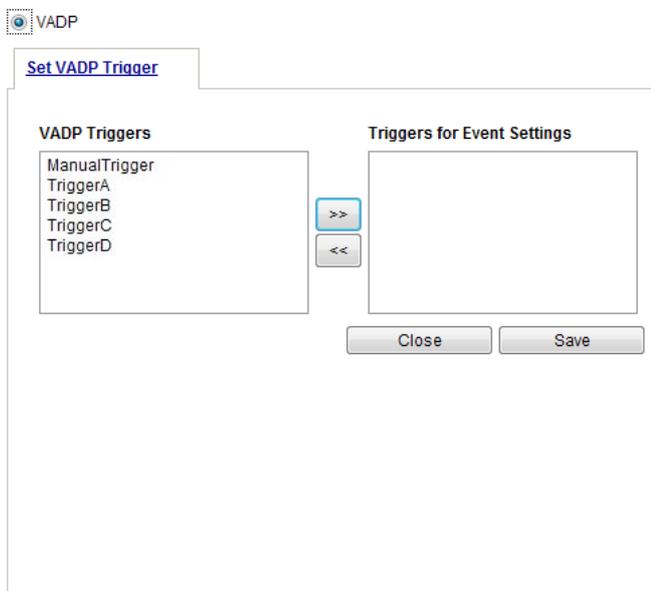

■ Manual triggers

An event can be manually triggered by the manual trigger buttons on the main page.

■ VADP

It is presumed that you already uploaded and enabled the VADP modules before you can associate VADP triggers with an Event setting.

Click on the Set VADP Trigger button to open the VADP setup menu. The triggering conditions available with 3rd-party software modules known as VADP will be listed. Use the arrow buttons to select these triggers. Users may implant these modules for different purposes such as triggering motion detection, or applications related to video analysis, etc. Please refer to page 145 for the configuration options with VADP modules.

3. Action

Define the actions to be performed by the Network Camera when a trigger is activated.

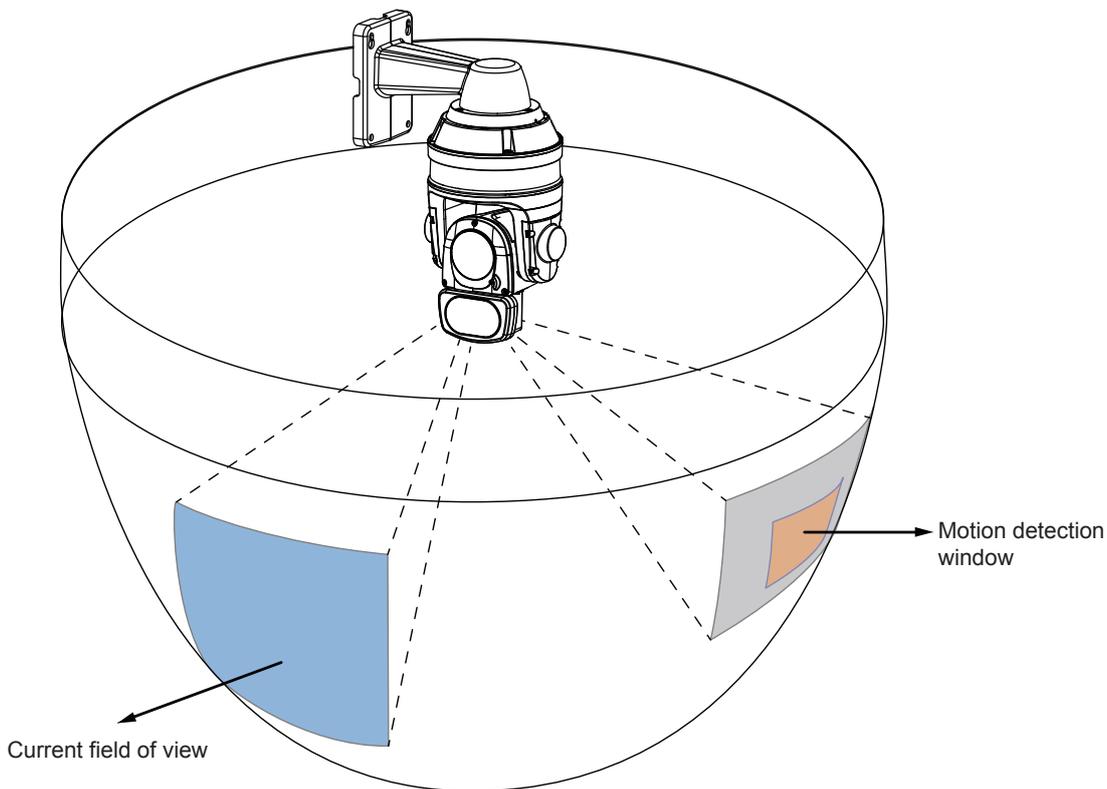

- Trigger digital output for seconds
 Select this option to turn on the external digital output device when a trigger is activated. Specify the length of the trigger interval in the text box.
- Backup media if the network is disconnected
 Select this option to backup media file on SD card if the network is disconnected. Please note that this function will only be displayed after you set up a networked storage (NAS). For more information about how to set up network storage, please refer to page 150.
- Trigger auto tracking
 Auto tracking starts by the occurrence of another trigger.
- Play audio clip:
 A pre-loaded audio clip can be configured to be played when one triggering condition is met. For example, when an intruder is detected, the event plays a warning message to deter an intruder.
- Move to preset location
 Select a preset location you've configured. Note that please configure **Preset locations** first. For detailed information, please refer to page 118. Another checkbox will appear, **Capture media after moving to the location**. You can select to record associated snapshot, video clip or system event once the event is triggered and the camera moves to the preset location. See Add Media in the following discussion.

To set an event with recorded video or snapshots, it is necessary to configure the server and media settings so that the Network Camera will know what action to take (such as which server to send the media files to) when a trigger is activated.

 **NOTE:**

If you configured a motion detection window as a trigger, the motion detection may become invalid when the camera's field of view moved away from the detection window.

You can let camera return to the motion detection position to detect the coming event by re-configuring your Home position in **PTZ > PTZ settings** (see page 114) or turn the camera to a preset position.

Add server

Click **Add server** to unfold the server setting window. You can specify where the notification messages are sent when a trigger is activated. A total of 5 server settings can be configured.

There are four choices of server types available: Email, FTP, HTTP, and Network storage. Select the item to display the detailed configuration options. You can configure either one or all of them.

Server type - Email

Select to send the media files via email when a trigger is activated.

- Server name: Enter a name for the server setting.
- Sender email address: Enter the email address of the sender.
- Recipient email address: Enter the email address of the recipient.
- Server address: Enter the domain name or IP address of the email server.
- User name: Enter the user name of the email account if necessary.
- Password: Enter the password of the email account if necessary.
- Server port: The default mail server port is set to 25. You can also manually set another port.

If your SMTP server requires a secure connection (SSL), check **This server requires a secure connection (SSL)**.

To verify if the email settings are correctly configured, click **Test**. The result will be shown in a pop-up window. If successful, you will also receive an email indicating the result.

Click **Save server** to enable the settings, then click **Close** to exit the Add server page.

After you set up the first event server, a new item for event server will automatically show up on the Server list. If you wish to add more server options, click **Add server**.

Server	Media	Extra parameter
<input type="checkbox"/> SD	-----None-----	SD test View
<input type="checkbox"/> Email	-----None-----	

Server type - FTP

Select to send the media files to an FTP server when a trigger is activated.

Server name:

Server type

Email
 FTP

Server address:

Server port:

User name:

Password:

FTP folder name:

Passive mode

HTTP
 Network storage

- Server name: Enter a name for the server setting.
- Server address: Enter the domain name or IP address of the FTP server.
- Server port: By default, the FTP server port is set to 21. It can also be assigned to another port number between 1025 and 65535.
- User name: Enter the login name of the FTP account.
- Password: Enter the password of the FTP account.
- FTP folder name
Enter the folder where the media file will be placed. If the folder name does not exist, the Network Camera will create one on the FTP server.

■ **Passive mode**

Most firewalls do not accept new connections initiated from external requests. If the FTP server supports passive mode, select this option to enable passive mode FTP and allow data transmission to pass through the firewall.

To verify if the FTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as shown below. If successful, you will also receive a test.txt file on the FTP server.

Click **Save server** to enable the settings, then click **Close** to exit the Add server page.

Server type - HTTP

Select to send the media files to an HTTP server when a trigger is activated.

- **Server name:** Enter a name for the server setting.
- **URL:** Enter the URL of the HTTP server.
- **User name:** Enter the user name if necessary.
- **Password:** Enter the password if necessary.

To verify if the HTTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as below. If successful, you will receive a test.txt file on the HTTP server.

Click **Save server** to enable the settings and click **Close** to exit the Add server page.

Network storage:

Select to send the media files to a network storage location when a trigger is activated. Please refer to **NAS server** on page 150 for details.

Click **Save server** to enable the settings, then click **Close** to exit the Add server page.

Server	Media	Extra parameter
<input type="checkbox"/> SD	-----None-----	SD test View
<div style="display: flex; justify-content: space-between;"> Add server Add media  </div> <div style="border: 1px solid #ccc; padding: 10px; margin-top: 5px;"> <p>Server name: <input type="text"/></p> <p>Server type</p> <p><input type="radio"/> Email</p> <p><input type="radio"/> FTP</p> <p><input type="radio"/> HTTP</p> <p><input checked="" type="radio"/> Network storage</p> <p>Network storage location: <input type="text"/></p> <p>(For example: \\my_nas\disk\folder)</p> <p>Workgroup: <input type="text"/></p> <p>User name: <input type="text"/></p> <p>Password: <input type="text"/></p> <div style="display: flex; justify-content: flex-end; gap: 10px; margin-top: 10px;"> <input type="button" value="Test"/> <input type="button" value="Save server"/> <input type="button" value="Close"/> </div> </div>		

- **SD Test:** Click to test your SD card. The system will display a message indicating success or failure. If you want to use your SD card for local storage, please format it before use. Please refer to page 153 for detailed information.

Add media

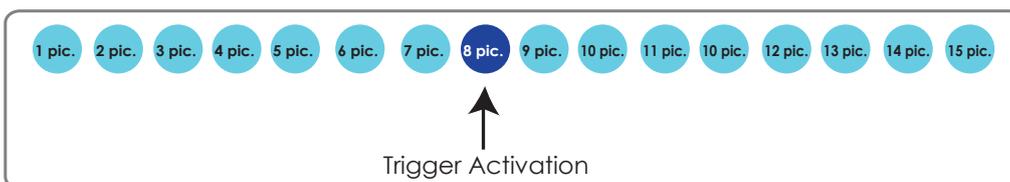

Click **Add media** to open the media setting window. You can specify the type of media that will be sent and preserved when a trigger is activated. A total of 5 media settings can be configured. There are three choices of media types available: Snapshot, Video Clip, and System log. Select the item to display the detailed configuration options. You can configure either one or all of them.

Media type - Snapshot

Select to send snapshots when a trigger is activated.

- Media name: Enter a name for the media setting.
- Source: Select to take snapshots from stream 1 ~ 4. (The following options are available when the check circle is selected.)
- Send pre-event images
The Network Camera has a buffer area; it temporarily holds data up to a certain limit. Enter a number to decide how many images to capture before a trigger is activated. Up to 7 images can be generated.
- Send post-event images
Enter a number to decide how many images to capture after a trigger is activated. Up to 7 images can be generated.

For example, if both the Send pre-event images and Send post-event images are set to 7, a total of 15 images are generated after a trigger is activated.

- File name prefix
Enter the text that will be appended to the front of the file name.

- Add date and time suffix to the file name
Select this option to add a date/time suffix to the file name.
For example:

Click **Save media** to enable the settings, then click **Close** to exit the Add media page.

After you set up the first media server, a drop-down menu of existing medias will be available on the Media list. If you wish to add more media options, click **Add media** again.

Server	Media	Extra parameter
<input type="checkbox"/> SD	<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">----None----</div> <div style="background-color: #e0e0e0; padding: 2px;">----None----</div> <div style="background-color: #c0c0c0; padding: 2px;">Snapshot</div> <div style="background-color: #a0a0a0; padding: 2px;">----None----</div> </div>	SD test View <input type="checkbox"/> Create folders by date time and hour automatically
<input type="checkbox"/> NAS	<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">----None----</div> <div style="background-color: #e0e0e0; padding: 2px;">----None----</div> <div style="background-color: #c0c0c0; padding: 2px;">Snapshot</div> <div style="background-color: #a0a0a0; padding: 2px;">----None----</div> </div>	View

Media type - Video clip

Select to send video clips when a trigger is activated.

Media name:

Media type

Attached media:

Snapshot
 Video clip

Source:

Pre-event recording: seconds [0~9]

Maximum duration: seconds [1~20]

Maximum file size: Kbytes [50~8192]

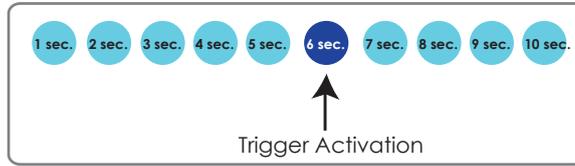

File name prefix:

System log

- Media name: Enter a name for the media setting.
- Source: Select the source of video clip.
- Pre-event recording
The Network Camera has a buffer area; it temporarily holds data up to a certain limit. Enter a number to decide the duration of recording before a trigger is activated. Up to 9 seconds can be set.

■ **Maximum duration**

Specify the maximum recording duration in seconds. Up to 20 seconds can be set.
 For example, if pre-event recording is set to 5 seconds and the maximum duration is set to 10 seconds, the Network Camera continues to record for another 4 seconds after a trigger is activated.

■ **Maximum file size**

Specify the maximum file size allowed.

■ **File name prefix**

Enter the text that will be appended to the front of the file name.
 For example:

Click **Save media** to enable the settings, then click **Close** to exit the Add media page.

Media type - System log

Select to send a system log when a trigger is activated.

Click **Save media** to enable the settings, then click **Close** to exit the Add media page.

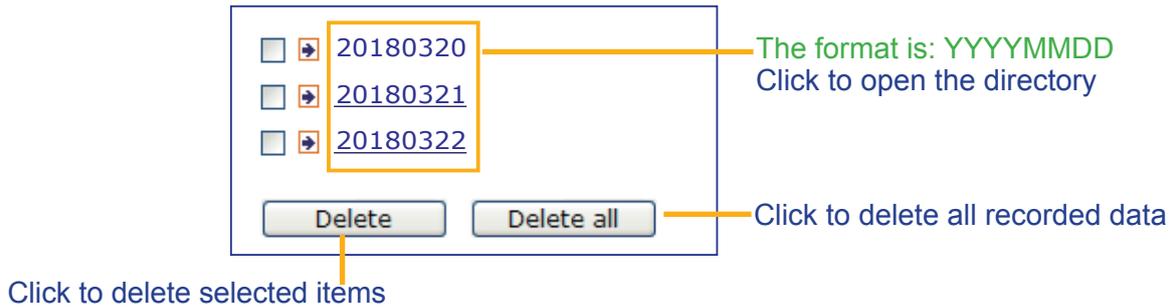

Server	Media	Extra parameter
<input type="checkbox"/> SD	-----None-----	SD test View
<input type="checkbox"/> Email	Snapshot Video clip System log	
<input type="checkbox"/> FTP		
<input type="checkbox"/> HTTP	-----None-----	
<input type="checkbox"/> NAS	-----None-----	View

- **View:** Click this button to open a file list window. This function only applies when an SD card and networked storage are available.

If you click **View** button of SD card, a Local storage page will pop up for you to manage recorded files on SD card. For more information about Local storage, please refer to page 153. If you click **View** button of Network storage, a file directory window will pop up for you to view recorded data on Network storage.

- **Create folders by date, time, and hour automatically:** If you check this item, the system will automatically create sub-folders named by the date.

The following is an example of a file destination with recorded video clips:

Click [20180320](#) to open the directory:

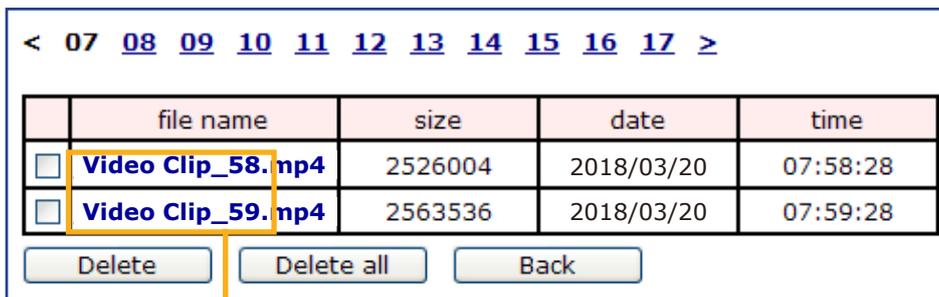

The format is: HH (24r)
Click to open the file list for that hour

Click to delete selected items

Click to delete all recorded data

Click to go back to the previous level of the directory

The format is: File name prefix + Minute (mm)
You can set up the file name prefix on Add media page.

Here is an example of the Event setting:

Event name:

Enable this event

Priority: Normal

Detect next motion detection or digital input after second(s).

1. Schedule

↓

2. Trigger

↓

3. Action

Action

Trigger digital output 1 for seconds

Trigger digital output 2 for seconds

Backup media if the network is disconnected

Trigger auto tracking

Play audio clip : -----None----- Configure [Audio clips](#)

Move to preset location: preset14 Configure [Preset locations](#)

Capture media after moving to the location

Server	Media	Extra parameter
<input type="checkbox"/> SD	-----None----- <input type="button" value="v"/>	SD test View
<input checked="" type="checkbox"/> NAS	video <input type="button" value="v"/>	<input type="checkbox"/> Create folders by date time and hour automatically View
<input type="checkbox"/> Email	-----None----- <input type="button" value="v"/>	

When completed the settings with steps 1~3 to arrange Schedule, Trigger, and Action of an event, click **Save event** to enable the settings and click **Close** to exit the page.

The following is an example of the Event setting page:

Event

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Trigger	
Event1	ON	V	V	V	V	V	V	V	00:00~24:00	boot	<input type="button" value="Delete"/>

[Help](#)

Server settings

Name	Type	Address/Location	
NAS	ns	\\172.16.4.39\nas	<input type="button" value="Delete"/>

Media

Available memory space: 13000KB

Name	Type	
Snapshot	snapshot	<input type="button" value="Delete"/>
Video clip	videoclip	<input type="button" value="Delete"/>
System log	systemlog	<input type="button" value="Delete"/>

When the Event Status is **ON**, once an event is triggered by motion detection, the Network Camera will automatically send snapshots via e-mails.

If you want to stop the event trigger, you can click **ON** to turn it to **OFF** status or click **Delete** to remove the event setting.

To remove a server setting from the list, select a server name and click **Delete**. Note that you can only delete a server setting when the server setting is currently not applied to an event setting.

To remove a media setting from the list, select a media name and click **Delete**. Note that you can only delete a media setting when the media setting is currently not applied to an event setting.

Customized Script

This function allows you to upload a sample script (.xml file) to the camera, which will save your time on configuring the settings. Please note that there is a limited number of customized scripts you can upload; if the current amount of customized scripts has reached the limit, an alert message will prompt. If you need more information, please contact VIVOTEK technical support.

Customized Script

Name	Date	Time
User1	2018/03/20	18:13:46

Click to upload a file →

Click to modify the script online →

Applications > Motion detection

This section explains how to configure the Network Camera to enable motion detection. A total of 5 motion detection windows can be configured.

Enable motion detection

**Motion Detection Setting 2:
For special situations**

Normal light mode
Profile mode

Window name
Motion1

Item size: 17

Sensitivity: 80%

**Motion Detection Setting 1:
For normal situations**

Follow the steps below to enable motion detection:

1. Click **New** to add a new motion detection window.
2. In the Window Name text box, enter a name for the motion detection window.
 - Use 4 mouse clicks to designate a detection window. You can change the window shape by dragging the corner marks to a preferred location.
 - Drag the item size tab to change the minimum size of item to trigger an alarm. An item size box will appear in the center of screen for your reference (in semi-transparent red). An intruding object must be larger than the Item size to trigger an alarm. Change the item size according to the live view.
 - To delete a window, click the X mark on the right of the window name.
3. Define the sensitivity to moving objects by moving the Sensitivity slide bar. Note that a high sensitivity is prone to produce false alarms such as the fast changes of light (such as day/night mode switch, turning lights on/off). A movement must persist longer than 0.3 second for the motion to be detected.
4. Click **Save** to enable the settings.
5. Select **Enable motion detection** to enable this function.

For example:

Enable motion detection

Normal light mode
Profile mode

Window name
Motion1

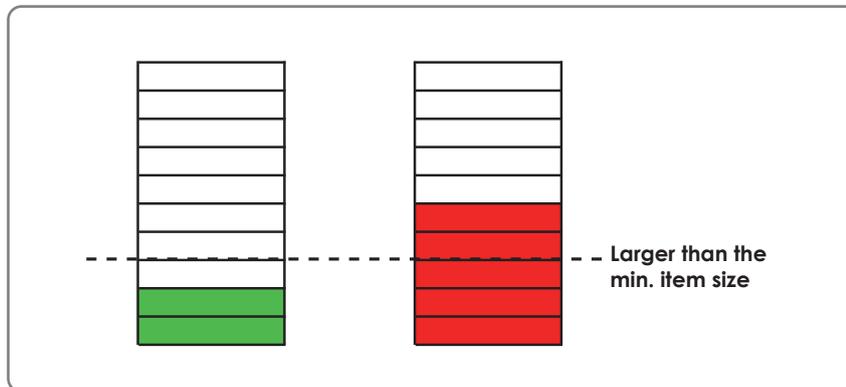

Item size: 17

Sensitivity: 80%

The Percentage Indicator will rise or fall depending on the variation between sequential images. When motions are detected by the Network Camera and are considered to exceed the preset threshold, the red bar rises. Meanwhile, the motion detection window will be outlined in red.

Photos or videos can be captured instantly and configured to be sent to a remote server (via an Email or FTP server). For more information on how to configure an event setting, please refer to Event settings on page 123.

A green bar indicates that even though motions have been detected, the event has not been triggered because the image variations still fall under the preset threshold.

If you want to configure other motion detection settings for day/night/schedule mode (e.g., for a different lighting condition), please click **Profile** to open the Motion Detection Profile Settings page as shown below. Another three motion detection windows can be configured on this page.

Enable motion detection

Normal light mode **Profile mode**

Window name: Motion1

Item size: 15

Enable to apply these settings at

Night mode

Schedule mode [hh:mm]

Sensitivity: 80%

New Save

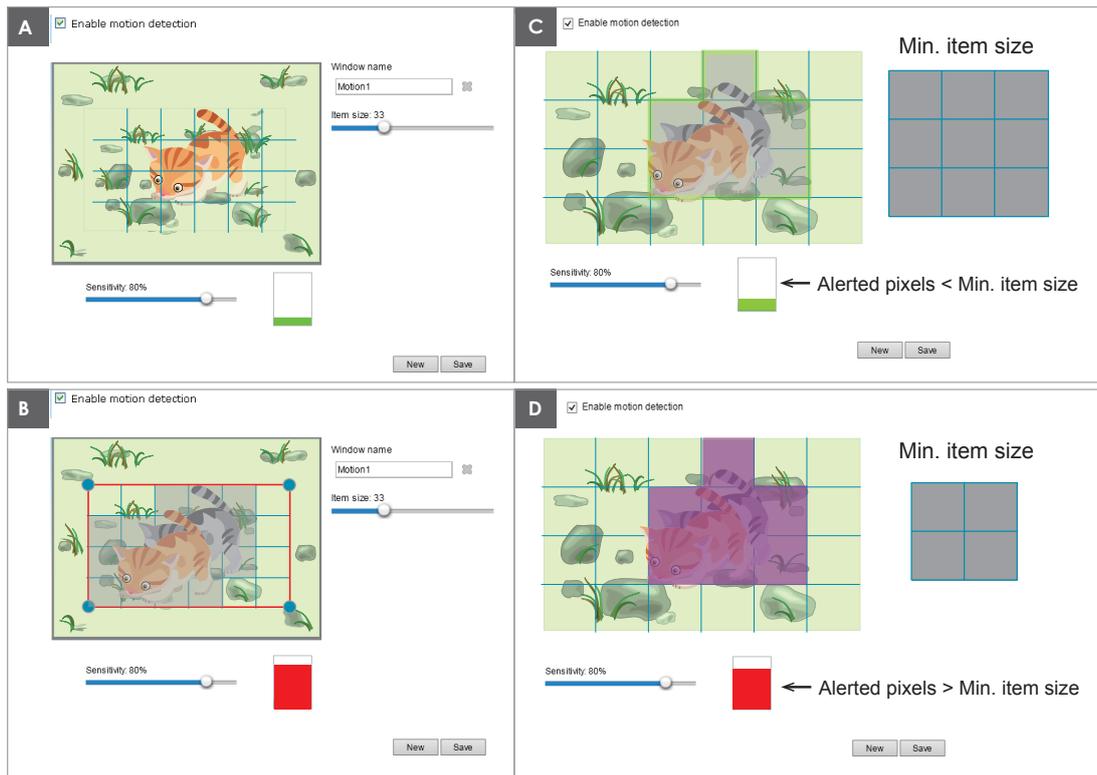

Please follow the steps below to set up a profile:

1. Create a new motion detection window.
2. Click the **Profile mode** tab.
3. Select the applicable Schedule mode. Please manually enter a time range.
4. Click **Save** to enable the settings and click **Close** to exit the page.

This motion detection window will also be displayed on the Event Settings page. You can go to **Event > Event settings > Trigger** to select it as a trigger source. Please refer to page 124 for detailed information.

 **NOTE:**

► *How does motion detection work?*

There are two motion detection parameters: Sensitivity and Min. Item Size. As illustrated above, frame A and frame B are two sequential images. Pixel differences between the two frames are detected and highlighted in gray in which the sensitivity setting will take effect. Sensitivity is a value that expresses the sensitivity to moving objects. A higher sensitivity setting allows camera to detect slight movements while a lower sensitivity setting will neglect them.

The minimum item size is a threshold value that determines how many “alerted pixels” can trigger an event. When the size of an intruding object is larger than the minimum size, and its movement persist for 0.3 second, the motion is judged to exceed the defined threshold; and the motion window will be outlined in red. With a large minimum item size, the size of moving object in frame C is considered as smaller than the minimum item size, no motion alarm is triggered. With a smaller minimum item size, the same moving object in frame D triggers the alarm.

For applications that require a high level of security management, it is suggested to use **higher** sensitivity settings. However, a higher sensitivity level can also produce false alarms due to fast light changes when switching between the day and night modes, AE switch, turning the light on or off, etc.

Applications > DI and DO

Digital input 1

Normal status: High Low

Current status: **High**

Digital input 2

Normal status: High Low

Current status: **High**

Digital input 3

Normal status: High Low

Current status: **High**

Digital input 4

Normal status: High Low

Current status: **High**

Digital output 1

Normal status: Open Grounded

Current status: **Open**

Digital output 2

Normal status: Open Grounded

Current status: **Open**

Digital input: Select High or Low to define normal status for the digital input. Connect a digital input from a sensor device to the camera, the Network Camera will report the current signal status. You may then configure the Normal status (non-trigger status) as High or Low.

Digital output: Select High or Low to define normal status for the digital output. Connect an output line to an external device, the Network Camera will report the current signal status. You may then configure the Normal status (non-trigger status) as High or Low.

Set up the event source as DI on **Event > Event settings > Trigger**. Please refer to page 124 for detailed information.

Applications > Tampering detection

This section explains how to set up camera tamper detection. With tamper detection, the camera is capable of detecting incidents such as **redirection**, **blocking or defocusing**, or even **spray paint**.

Camera tampering detection

Tampering detection

Trigger duration seconds [10~600]

Trigger threshold [0~100]

Image too dark detection

Trigger duration seconds [1~10]

Trigger threshold [0~100]

Image too bright detection

Trigger duration seconds [1~10]

Trigger threshold [0~100]

Image too blurry detection

Trigger duration seconds [1~10]

Trigger threshold [0~100]

Please follow the steps below to set up the camera tamper detection function:

1. Click to select the checkbox before tampering conditions: Tampering detection, Image too dark, Image too bright, and Image too blurry. Enter the tamper trigger duration. (10 sec. ~ 10 min.) The tamper alarm will be triggered only when the tampering factor (the difference between current frame and pre-saved background) exceeds the trigger threshold. Conditions such as image too dark, too bright, or too blurry (defocused) can also be configured as tampering conditions. The Trigger threshold determines how sensitive your is tamper detection setting.

Too bright: shining a flash light. The average lighting level of the scene is taken into consideration.

Too dark: covering the objective or spraying paint.

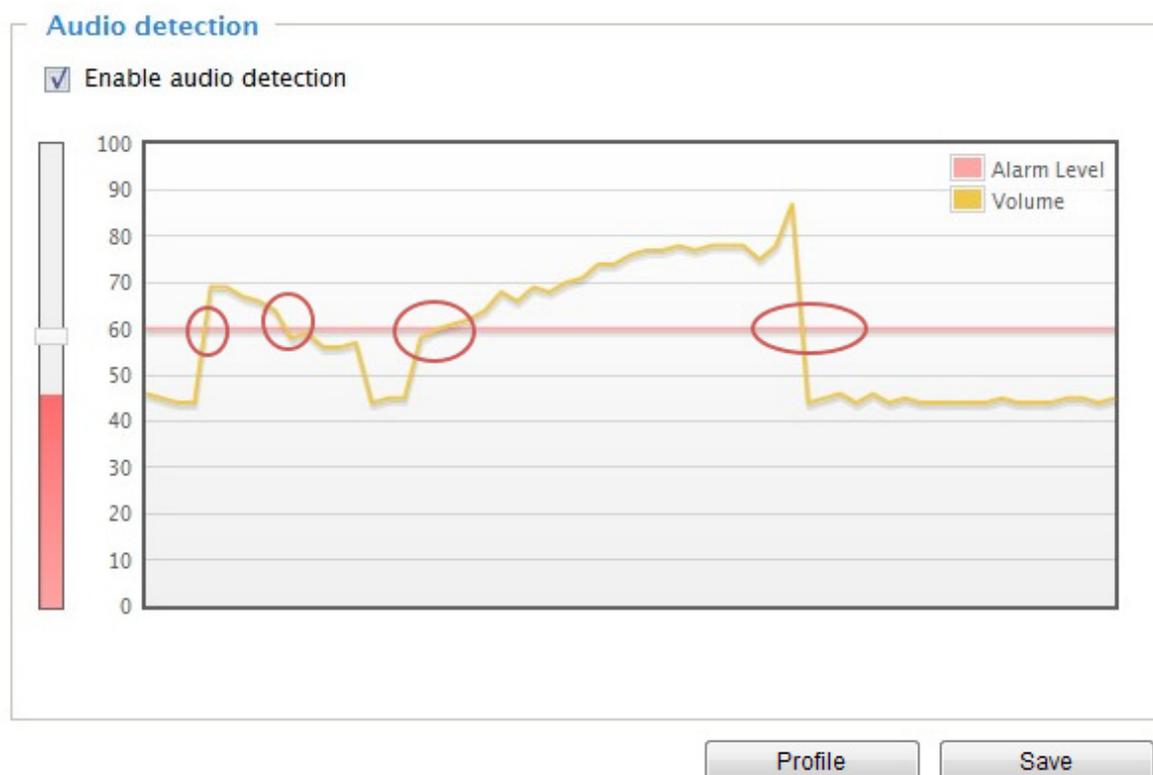

Too blurry: blurry scene can be the result of strong interference on the device, such as EMI interference.

2. You can configure Tampering Detection as a trigger element to the proactive event configurations in **Event -> Event settings -> Trigger**. For example, when the camera is tampered with, camera can be configured to send the pre- and post-event video clips to a networked storage device. Please refer to page 150 for detailed information.

Applications > Audio detection

Audio detection, along with video motion detection, is applicable in the following scenarios:

1. Detection of activities not covered by camera view, e.g., a loud input by gun shots or breaking a door/window.
2. A usually noisy environment, such as a factory, suddenly becomes quiet due to a breakdown of machines.
3. A PTZ camera can be directed to turn to a preset point by the occurrence of audio events.
4. Dark environments where video motion detection may not function well.

The red circles indicate where the audio alarms can be triggered when breaching or falling below the preset threshold.

How to configure Audio detection:

1. Once the Audio detection window is opened, the current sound input will be interactively indicated by a fluctuating yellow wave diagram.
2. Use a mouse click to drag the Alarm level tab to a preferred location on the slide bar.
3. Select the “Enable audio detection” checkbox and click Save to enable the feature.

NOTE:

1. Note that the volume numbers (0~100) on the side of wave diagram does not represent decibel (dB). Sound intensity level has already been mapped to preset values. You can, however, use the real-world inputs at your installation site that are shown on the wave diagram to configure an alarm level.
2. To configure this feature, you must not mute the audio in **Configuration > Media > Audio**. The default of the camera can be muted due to the lack of an internal microphone. An external microphone is provided by users.

You can use the **Profile** window to configure a different Audio detection setting. For example, a place can be noisy in the day time and become very quiet in the night.

1. Click on the **Enable this profile** checkbox. Once the Audio detection window is opened, the current sound input will be interactively indicated by a fluctuating yellow wave diagram.
2. Use a mouse click to drag the **Alarm level** tab to a preferred location on the slide bar.
3. Select the **Day**, **Night**, or **Schedule** mode check circles. You may also manually configure a period of time during which this profile will take effect.
4. Click **Save** and then click **Close** to complete your configuration.

>Audio detection profile settings

Audio detection

General settings

Enable this profile

This profile is applied to:

Day mode

Night mode

Schedule mode

From to [hh:mm]

IMPORTANT:

- If the Alarm level and the received volume are set within a range of 20% on the wave diagram, frequent alarms will be triggered. It is recommended to set the Alarm level farther apart from the detected sound level.
- To configure and enable this feature, you must not configure video stream #1 into motion JPEG. If an external microphone input is connected and recording of audio stream is preferred, audio stream is transmitted between camera and viewer/recording station along with stream #1.
- Refer to page 78 for Audio settings, and page 72 for video streaming settings.

Applications > VADP (VIVOTEK Application Development Platform)

Module list

Module name	Vendor	Version	Status	License
<input type="button" value="Start"/> <input type="button" value="Stop"/>				

Users can store and execute VIVOTEK's or 3rd-party software modules onto the camera's flash memory or SD card. These software modules can apply in video analysis for intelligent video applications such as license plate recognition, object counting, or as an agent for edge recording, etc.

- Once the software package is successfully uploaded, the module configuration (vadv.xml) information is displayed. When uploading a module, the camera will examine whether the module fits the predefined VADP requirements. Please contact technical support or the vendor of your 3rd-party module for the parameters contained within.
- Users can also run VIVOTEK's VADP packages as a means to access updated functionality instead of replacing the entire firmware.
- Note that for some cameras the flash is too small to hold VADP packages. These cameras will have its "Save to SD card" checkbox selected and grayed-out for all time.
- The file system of SD card (FAT32) does not support soft (symbolic) link. It will return failure if your module tries to create soft links on SD card.

To utilize a software module, acquire the software package and click **Browse** and **Upload** buttons. The screen message for a successful upload is shown below:

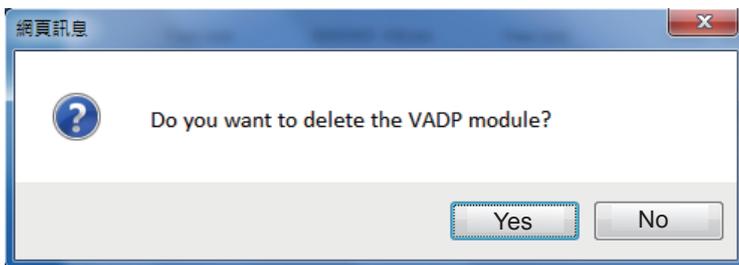

To start a module, select the checkcircle in front, and click the **Start** button.

If you should need to remove a module, select the checkcircle in front and then click the **Stop** button. By then the module status will become **OFF**, and the **X** button will appear at the end of the row. Click on the **X** button to remove an existing module.

When prompted by a confirm message, Click **Yes** to proceed.

Note that the actual memory consumed while operating the module will be indicated on the **Memory status** field. This helps determine whether a running module has consumed too much of system resources.

On the License page, register and activate the license for using VIVOTEK's VADP modules. You should acquire the license key elsewhere, and manually upload to the network camera.

Follow the onscreen instruction on VIVOTEK's website for the registration procedure.

Status License

Manual License

To receive a license key for VADP application, go to <http://www.vivotek.com> and join the WTK member. This device's VADP number is:

BbM79RE=OdGu1PIUEqJRFgc6sac0Rs7g4PXl

Select file No file selected.

Recording > Recording settings

This section explains how to configure the recording settings for the Network Camera.

Recording Settings

Insert your SD card and click here to test

Recording settings

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Source	Destination	Delete
<div style="display: flex; justify-content: space-between; align-items: center;"> Add SD test </div>												

NOTE:

► Please remember to format your SD card when using it for the first time. Please refer to page 153 for detailed information.

Recording Settings

Click **Add** to open the recording setting window. On this page, you can define the adaptive recording, recording source, recording schedule, and recording capacity. A total of 2 recording settings can be configured.

Recording name:

Enable this recording

With adaptive recording

Pre-event recording: seconds [0~9]

Post-event recording: seconds [0~10]

Priority:

Source:

Trigger

Schedule

Sun Mon Tue Wed Thu Fri Sat

Time

Always

From to [hh:mm]

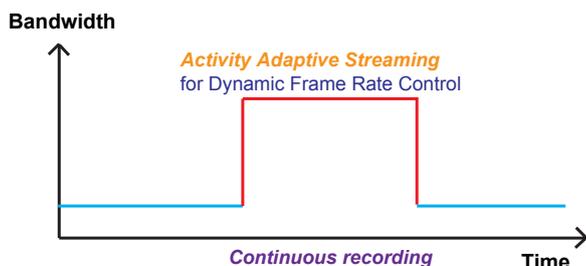

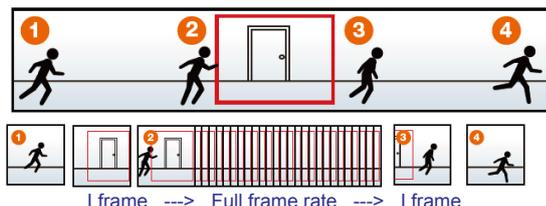

Network fail

Note: To enable recording notification please configure [Event](#) first

- Recording name: Enter a name for the recording setting.
- Enable this recording: Select this option to enable video recording.
- With adaptive recording:

Select this option will activate the frame rate control according to alarm trigger. The frame control means that when there is alarm trigger, the frame rate will raise up to the value you've set on Stream setting page. Please refer to page 73 for more information.

If you enable adaptive recording and enable time-shift cache stream on Camera A, only when an event is triggered on Camera A will the server record video streams in the full frame rate; otherwise, it will only request the I frame data during normal monitoring, thus effectively save lots of bandwidth and storage.

NOTE:

- ▶ To enable adaptive recording, please make sure you've set up the trigger source such as Motion Detection, DI Device, or Manual Trigger.
- ▶ When there is no alarm trigger:
 - JPEG mode: record 1 frame per second.
 - H.265 or H.264 mode: record I frame only.
- ▶ When the I frame period is >1s on Video settings page, it should be forced to make the I frame period to 1s when adaptive recording is activated.

The alarm trigger includes: motion detection and DI detection. Please refer to Event settings on page 123.

- Pre-event recording and post-event recording
The Network Camera has a buffer area; it temporarily holds data for up to a certain limit. Enter a number to decide the duration of recording that will take place before and after a trigger is activated.
- Priority: Select the relative importance of this recording (High, Normal, or Low). Recording with a higher priority setting will be executed first.
- Source: Select a stream as the recording source.

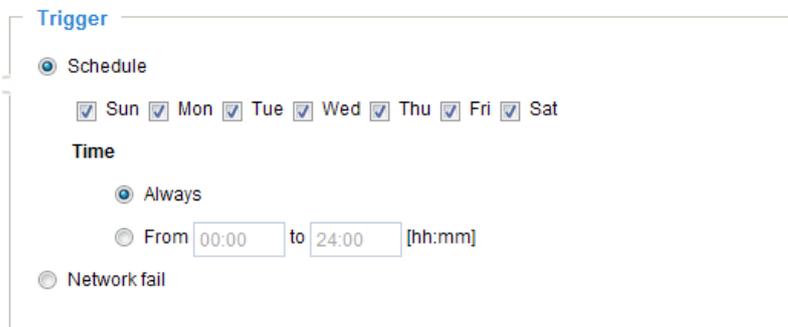

NOTE:

▶ To enable recording notification, please configure **Event settings** first. Please refer to page 123.

Please follow steps 1~2 below to set up the recording:

1. Trigger

Select a trigger source.

- Schedule: The server will start to record files on the local storage or to a networked storage device (NAS).
- Network fail: Since the time when the network fails, the server will start to record files on the local storage (SD card).

2. Destination

You can select the SD card or network attached storage (NAS) for recording video files.

Note: To enable recording notification please configure [Event](#) first

Save Close

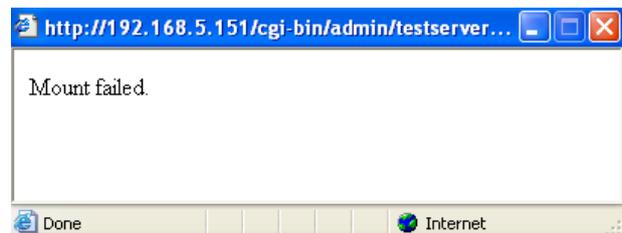

NAS server

Click **Add NAS server** to open the server setting window and follow the steps below to set up:

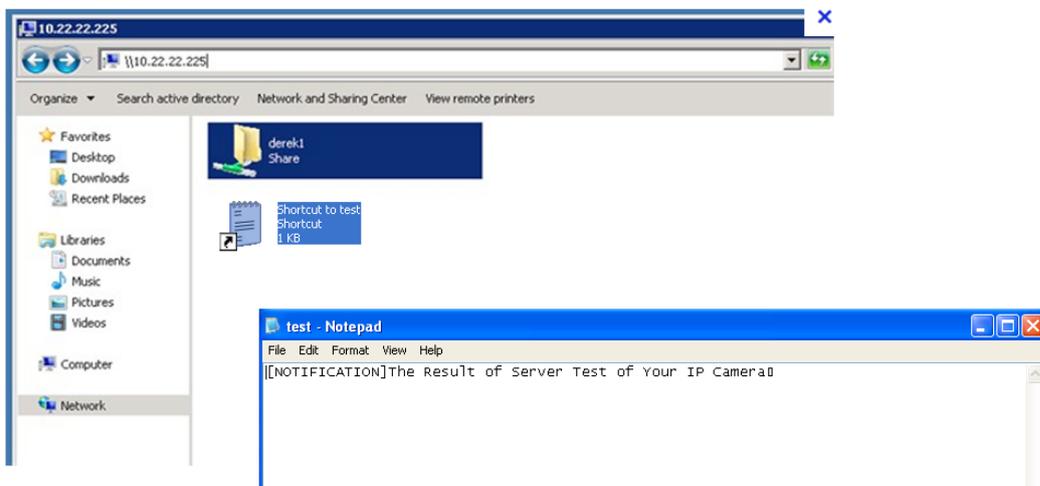

1. Fill in the information for your server.

For example:

2. Click **Test** to check the setting. The result will be shown in the pop-up window.

If successful, you will receive a test.txt file on the network storage server.

3. Enter a server name.
4. Click **Save** to complete the settings and click **Close** to exit the page.

Recording name:

Enable this recording

With adaptive recording ([Help](#))

Pre-event recording: seconds [0~9]

Post-event recording: seconds [0~10]

Priority:

Source:

Destination

Destination:

Capacity:

Entire free space

Reserved space: Mbytes

Enable cyclic recording

Recording file management

Maximum duration: minutes [1~30]

Maximum file size: MB [1~900]

File name prefix:

Note: To enable recording notification please configure [Event](#) first

- **Capacity:** You can select either the entire storage space available or specify a reserved space. The recording size limit must be larger than the reserved space for cyclic recording. The reserved space is used during cyclic recording to prevent malfunctions that might occur during the transaction stage when the video feeds are about to fill up the storage space, and new data is still coming. This value must be larger than 15 MBytes.
- **Enable cyclic recording:** If you check this item, when the maximum capacity is reached, the oldest files will be overwritten by the latest ones.
- **File name prefix:** Enter the text that will be appended to the front of the file name.

If you want to enable recording notification, please click [Event](#) to set up. Please refer to **Event > Event settings** on page 123 for more details.

When completed, select **Enable this recording**. Click **Save** to enable the setting and click **Close** to exit

this page. When the system begins recording, it will send the recorded files to a networked storage or SD card. The new recording name will appear on the recording page as shown below. To remove a recording setting from the list, select it and click **Delete**.

Recording settings

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Source	Destination	Delete
Video	ON	V	V	V	V	V	V	V	00:00~24:00	stream1	SD	<input type="button" value="Delete"/>

[SD test](#)

- **[Video](#) (Name)**: Click to open the Recording settings page to modify its details.
- **[ON](#) (Status)**: Click to manually adjust the Status. ([ON](#): start recording; [OFF](#): stop recording)
- **[NAS](#) or [SD](#) (Destination)**: Click to open the file list of recordings as shown below. For more information about folder naming rules, please refer to page 135 or page 119 for details.

Local storage > SD card management

 **NOTE:**

- It is recommended to turn OFF the recording activity before you remove an SD card from the camera.
- The lifespan of an SD card is limited. Regular replacement of the SD card can be necessary.
- Camera filesystem takes up several megabytes of memory space. The storage space cannot be used for recording.
- Using an SD card that already contains data recorded by another device should not be used in this camera.
- Please do not modify or change the folder names in the SD card. That may result in camera malfunctions.

This section explains how to manage the local storage on the Network Camera. Here you can view SD card status, and implement SD card control.

SD card status

This column shows the status and reserved space of your SD card. Please remember to format the SD card when using for the first time.

SD card status

SD card status: Detached — no SD card

Total size: 0 KBytes Free size: 0 KBytes

Used size: 0 KBytes Use (%): 0 %

Used size:	235520 KBytes	Use (%):	1.537 %

SD card format

The Linux kernel EXT4 file system format applies to SD card larger than 32GB. However, if EXT4 is applied, the computers running Windows will not be able to access the contents on the SD card unless using some 3rd-party software.

SD card format

Ext4

SD card control

SD card control

Enable cyclic storage

Enable automatic disk cleanup

Maximum duration for keeping files: days

- **Enable cyclic storage:** Check this item if you want to enable cyclic recording. When the maximum capacity is reached, the oldest file will be overwritten by the latest one.
- **Enable automatic disk cleanup:** Check this item and enter the number of days you wish to retain a file. For example, if you enter “7 days”, the recorded files will be stored on the SD card for 7 days.

Click **Save** to enable your settings.

Local storage > Content management

This section explains how to manage the content of recorded videos on the Network Camera. Here you can search and view the records and view the searched results.

Searching and Viewing the Records

This column allows the user to set up search criteria for recorded data. If you do not select any criteria and click **Search** button, all recorded data will be listed in the **Search Results** column.

Search

Trigger type

Backup System boot Digital input

Motion Network fail Recording notify

Periodically Tampering detection VADP

Manual triggers Audio detection

Media type

Video clip Snapshot Text

Time

Search for last

From: :

to: :

- **File attributes:** Select one or more items as your search criteria.
- **Trigger time:** Manually enter the time range you want to search for contents created at a specific point in time.

Click **Search** and the recorded data corresponding to the search criteria will be listed in **Search Results** window.

Search Results

The following is an example of search results. There are four columns: Trigger time, Media type, Trigger type, and Locked. Click  to sort the search results in either direction.

Numbers of entries displayed on one page

Search results

<input type="checkbox"/>	<input type="checkbox"/>	Name	Trigger type	Starting time	Ending time
<input type="checkbox"/>	<input type="checkbox"/>	to SD	Periodically	Today at 3:45 PM	Today at 3:58 PM
<input type="checkbox"/>	<input type="checkbox"/>	to SD	Periodically	Today at 3:58 PM	--
<input type="checkbox"/>	<input type="checkbox"/>	test	Motion	Today at 3:45 PM	Today at 3:45 PM
<input type="checkbox"/>	<input type="checkbox"/>	test	Motion	Today at 3:49 PM	Today at 3:49 PM
<input type="checkbox"/>	<input type="checkbox"/>	test	Motion	Today at 3:49 PM	Today at 3:49 PM
<input type="checkbox"/>	<input type="checkbox"/>	test	Motion	Today at 3:50 PM	Today at 3:50 PM
<input type="checkbox"/>	<input type="checkbox"/>	test	Motion	Today at 3:50 PM	Today at 3:50 PM

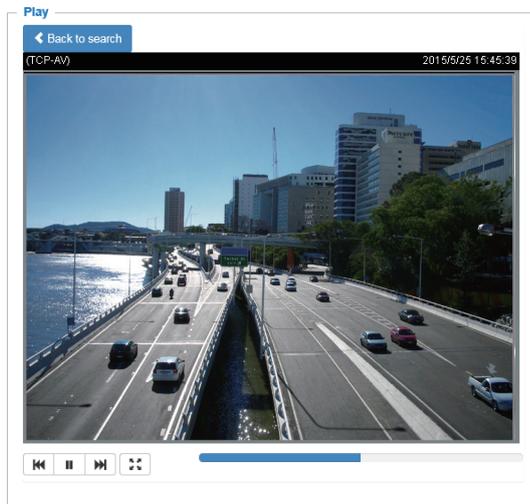

10    1 / 3  

Click to open a live view

- **Play:** Click on a search result which will highlight the selected item. A Play window will appear on top for immediate review of the selected file.

For example:

- **Download:** Click on a search result to highlight the selected item in purple as shown above. Then click the **Download** button and a file download window will pop up for you to save the file.
- **JPEGs to AVI:** This functions only applies to “JPEG” format files such as snapshots. You can select several snapshots from the list, then click this button. Those snapshots will be converted into an AVI file.

- **Lock/Unlock:** Select the checkbox in front of a desired search result, then click this button. The selected items will become Locked, which will not be deleted during cyclic recording. You can click again to unlock the selections.

For example:

Search results

<input type="checkbox"/>		Name	Trigger type	Starting time	Ending time
<input type="checkbox"/>		to SD	Periodically	Today at 3:45 PM	Today at 3:58 PM
<input type="checkbox"/>		to SD	Periodically	Today at 3:58 PM	--
<input checked="" type="checkbox"/>		test	Motion	Today at 3:45 PM	Today at 3:45 PM
<input checked="" type="checkbox"/>		test	Motion	Today at 3:49 PM	Today at 3:49 PM
<input checked="" type="checkbox"/>		test	Motion	Today at 3:49 PM	Today at 3:49 PM
<input type="checkbox"/>		test	Motion	Today at 3:50 PM	Today at 3:50 PM
<input type="checkbox"/>		test	Motion	Today at 3:50 PM	Today at 3:50 PM

10 1 / 3

Click to switch pages

- **Remove:** Select the desired search results, then click this button to delete the files.

Appendix

URL Commands for the Network Camera

1. Overview

For some customers who already have their own web site or web control application, the Network Camera/Video Server can be easily integrated through URL syntax. This section specifies the external HTTP-based application programming interface. The HTTP-based camera interface provides the functionality to request a single image, control camera functions (PTZ, output relay etc.), and get and set internal parameter values. The image and CGI-requests are handled by the built-in Web server.

2. Style Convention

In URL syntax and in descriptions of CGI parameters, text within angle brackets denotes content that is to be replaced with either a value or a string. When replacing the text string, the angle brackets should also be replaced. An example of this is the description of the name for the server, denoted with `<servername>` in the URL syntax description below, that is replaced with the string `myserver` in the URL syntax example further down in the page.

URL syntax is denoted with the word "Syntax:" written in bold face followed by a box with the referenced syntax as shown below. For example, name of the server is written as `<servername>` and is intended to be replaced with the name of the actual server. This can either be a name, e.g., "mywebcam" or "thecam.adomain.net" or the associated IP number for the server, e.g., 192.168.0.220.

Syntax:

```
http://<servername>/cgi-bin/viewer/video.jpg
```

Description of returned data is written with "**Return:**" in bold face followed by the returned data in a box. All data is returned in HTTP format, i.e., each line is separated with a Carriage Return and Line Feed (CRLF) printed as `\r\n`.

Return:

```
HTTP/1.0 <HTTP code> <HTTP text>\r\n
```

URL syntax examples are written with "**Example:**" in bold face followed by a short description and a light grey box with the example.

Example: request a single snapshot image

```
http://mywebserver/cgi-bin/viewer/video.jpg
```

3. General CGI URL Syntax and Parameters

CGI parameters are written in lower-case and as one word without any underscores or other separators. When the CGI request includes internal camera parameters, these parameters must be written exactly as they are named in the camera or video server. The CGIs are organized in functionally-related directories under the cgi-bin directory. The file extension .cgi is required.

Syntax:

```
http://<servername>/cgi-bin/<subdir>[/<subdir>...]/<cgi>.<ext>
[?<parameter>=<value>[&<parameter>=<value>...]]
```

Example: Set digital output #1 to active

<http://mywebserver/cgi-bin/dido/setdo.cgi?dol=1>

4. Security Level

SECURITY LEVEL	SUB-DIRECTORY	DESCRIPTION
0	anonymous	Unprotected.
1 [view]	viewer	Can view, listen, and talk to camera.
4 [operator]	operator	Operator access rights can modify most of the camera's parameters except some privileges and network options.
6 [admin]	admin	Administrator access rights can fully control the camera's operations.
7	N/A	Internal APIs. Unable to be changed by any external interfaces.

A viewer account can access all APIs with security level 0 and 1. An operator account can access all APIs with security level 0, 1, or 4. An admin account can access all APIs except internal APIs.

Access management is based on the URL directory structure and is described in following paragraphs.

5. Get Server Parameter Values

Note: The access right depends on the URL directory.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/<anonymous>/getparam.cgi?[<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/<viewer>/getparam.cgi?[<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/<operator>/getparam.cgi?[<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/<admin>/getparam.cgi?[<parameter>]
[&<parameter>...]
```

Where the *<parameter>* should be *<group>[_<name>]* or *<group>[.<name>]*. If you do not specify any parameters, all the parameters on the server will be returned. If you specify only *<group>*, the parameters of the related group will be returned.

When querying parameter values, the current parameter values are returned.

A successful control request returns parameter pairs as follows:

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Content-Length: <length>\r\n
\r\n
<parameter pair>
```

where *<parameter pair>* is

<parameter>=<value>\r\n

[<parameter pair>]

<length> is the actual length of content.

Example: Request IP address and its response

Request:

```
http://192.168.0.123/cgi-bin/admin/getparam.cgi?network_ipaddress
```

Response:

```
HTTP/1.0 200 OK\r\n
```

```
Content-Type: text/html\r\n
```

```
Content-Length: 33\r\n
```

```
\r\n
```

```
network.ipaddress=192.168.0.123\r\n
```

6. Set Server Parameter Values

Note: The access right depends on the URL directory.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/anonymous/setparam.cgi? <parameter>=<value>
```

```
[&<parameter>=<value>...][&return=<return page>]
```

```
http://<servername>/cgi-bin/viewer/setparam.cgi? <parameter>=<value>
```

```
[&<parameter>=<value>...][&return=<return page>]
```

```
http://<servername>/cgi-bin/operator/setparam.cgi? <parameter>=<value>
```

```
[&<parameter>=<value>...][&return=<return page>]
```

```
http://<servername>/cgi-bin/admin/setparam.cgi? <parameter>=<value>
```

```
[&<parameter>=<value>...][&return=<return page>]
```

PARAMETER	DESCRIPTION
<parameter>	A full path like: "videoin_c0_s0_h264_resolution", "videoin_c0_s0_h264_maxframe", etc.
<value>	The assigned <value> to the <parameter>.
<return page>	Redirect to the page <return page> after the <parameter> is assigned. The <return page> can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page. (Note: The return page can be a general HTML file (.htm, .html). It cannot be a CGI command or have any extra parameters. This parameter must be placed at the end of the parameter list.

Return:

```
HTTP/1.0 200 OK\r\n
```

```
Content-Type: text/html\r\nContext-Length: <length>\r\n\r\n<parameter pair>
```

where <parameter pair> is

```
<parameter>=<value>\r\n
```

```
[<parameter pair>]
```

Only the parameters that you set and are readable will be returned.

Example: Set the IP address of server to 192.168.0.123:

Request:

```
http://myserver/cgi-bin/admin/setparam.cgi?network\_ipaddress=192.168.0.123
```

Response:

```
HTTP/1.0 200 OK\r\n
```

```
Content-Type: text/html\r\n
```

```
Context-Length: 33\r\n
```

```
\r\n
```

```
network.ipaddress=192.168.0.123\r\n
```

7. Available parameters on the server

Valid values:

VALID VALUES	DESCRIPTION
string[<n>]	Text strings shorter than `n` characters. The characters `;`,`<`,`>`,`&` are invalid.
string[n~m]	Text strings longer than `n` characters and shorter than `m` characters. The characters `;`,`<`,`>`,`&` are invalid.
password[<n>]	The same as string but displays `*` instead.
<integer>	Any single integer number in 32-bits. The range is -2147483648~2147483647.
<positive integer>	Any single positive integer number in 32-bits. The range is 1~ 4294967295.
<m> ~ <n>	Any number between `m` and `n`.
domain name[<n>]	A string limited to a domain name shorter than `n` characters (eg. www.ibm.com).
email address [<n>]	A string limited to an email address shorter than `n` characters (eg. joe@www.ibm.com).
<ip address>	A string limited to an IP address (eg. 192.168.1.1).
<mac address>	A string limited to contain a MAC address without hyphens or colons.
<boolean>	A boolean value of 1 or 0 represents [Yes or No], [True or False], [Enable or Disable].
<value1>, <value2>, <value3>, ...	Enumeration. Only given values are valid.
blank	A blank string.
everything inside <>	A description
integer primary key	SQLite data type. A 32-bit signed integer. The value is assigned a unique integer by the server.
<text>	SQLite data type. The value is a text string, stored using the database encoding (UTF-8, UTF-16BE or UTF-16-LE).
<coordinate>	x, y coordinate (eg. 0,0)
<>window size>	window width and height (eg. 800x600)
<W,H>	The format for coordinate in 2D. W is the pixel number of width. H is the pixel number of height. EX: (176,144)
<WxH>	The format for resolution.

	W is the pixel number of width. H is the pixel number of height. Ex: 1920x1080, 2048x1536
available	The API is listed in product WebAPIs.
non-available	The API is not in product WebAPIs.
valid	The API is listed in product WebAPIs, and is functional.
non-valid	The API is listed in product WebAPIs, but is malfunction in this status.
<decimal>	Any decimal number expressed in 32-bits ranging from 1.18e-38~3.40e+38.

NOTE: The camera should not be restarted when parameters are changed.

7.1 system

Group: **system**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
hostname	string[64]	1/6	Host name of server (Network Camera, Wireless Network Camera, Video Server, Wireless Video Server).
ledoff	<boolean>	6/6	Turn on (0) or turn off (1) all led indicators.
date	<YYYY/MM/DD>, keep, auto	6/6	Current date of system. Set to 'keep' to keep date unchanged. Set to 'auto' to use NTP to synchronize date.
time	<hh:mm:ss>, keep, auto	6/6	Current time of the system. Set to 'keep' to keep time unchanged. Set to 'auto' to use NTP to synchronize time.
datetime	<MMDDhhmmYYYY .ss>	6/6	Another current time format of the system.
ntp	<domain name>, <ip address>, <blank>	6/6	NTP server. *Do not use "skip to invoke default server" for default value.
timezoneindex	-489 ~ 529	6/6	Indicate timezone and area. -480: GMT-12:00 Eniwetok, Kwajalein -440: GMT-11:00 Midway Island, Samoa -400: GMT-10:00 Hawaii -360: GMT-09:00 Alaska -320: GMT-08:00 Las Vegas, San_Francisco, Vancouver -280: GMT-07:00 Mountain Time, Denver -281: GMT-07:00 Arizona -240: GMT-06:00 Central America, Central Time, Mexico City, Saskatchewan -200: GMT-05:00 Eastern Time, New York, Toronto -201: GMT-05:00 Bogota, Lima, Quito, Indiana -180: GMT-04:30 Caracas -160: GMT-04:00 Atlantic Time, Canada, La Paz, Santiago

			<p>-140: GMT-03:30 Newfoundland</p> <p>-120: GMT-03:00 Brasilia, Buenos Aires, Georgetown, Greenland</p> <p>-80: GMT-02:00 Mid-Atlantic</p> <p>-40: GMT-01:00 Azores, Cape_Verde_IS.</p> <p>0: GMT Casablanca, Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London</p> <p>40: GMT 01:00 Amsterdam, Berlin, Rome, Stockholm, Vienna, Madrid, Paris</p> <p>41: GMT 01:00 Warsaw, Budapest, Bern</p> <p>80: GMT 02:00 Athens, Helsinki, Istanbul, Riga</p> <p>81: GMT 02:00 Cairo</p> <p>82: GMT 02:00 Lebanon, Minsk</p> <p>83: GMT 02:00 Israel</p> <p>120: GMT 03:00 Baghdad, Kuwait, Riyadh, Moscow, St. Petersburg, Nairobi</p> <p>121: GMT 03:00 Iraq</p> <p>140: GMT 03:30 Tehran</p> <p>160: GMT 04:00 Abu Dhabi, Muscat, Baku, Tbilisi, Yerevan</p> <p>180: GMT 04:30 Kabul</p> <p>200: GMT 05:00 Ekaterinburg, Islamabad, Karachi, Tashkent</p> <p>220: GMT 05:30 Calcutta, Chennai, Mumbai, New Delhi</p> <p>230: GMT 05:45 Kathmandu</p> <p>240: GMT 06:00 Almaty, Novosibirsk, Astana, Dhaka, Sri Jayawardenepura</p> <p>260: GMT 06:30 Rangoon</p> <p>280: GMT 07:00 Bangkok, Hanoi, Jakarta, Krasnoyarsk</p> <p>320: GMT 08:00 Beijing, Chongging, Hong Kong, Kuala Lumpur, Singapore, Taipei</p> <p>360: GMT 09:00 Osaka, Sapporo, Tokyo, Seoul, Yakutsk</p> <p>380: GMT 09:30 Adelaide, Darwin</p> <p>400: GMT 10:00 Brisbane, Canberra, Melbourne, Sydney, Guam, Vladivostok</p> <p>440: GMT 11:00 Magadan, Solomon Is., New</p>
--	--	--	--

VIVOTEK

			Caledonia 480: GMT 12:00 Aucklan, Wellington, Fiji, Kamchatka, Marshall Is. 520: GMT 13:00 Nuku'Alofa
daylight_enable	<boolean>	6/6	Enable automatic daylight saving time in time zone.
daylight_dstactualmode	<positive integer>	6/7	Check if current time is under daylight saving time. (Used internally)
daylight_auto_begintime	string[19]	6/7	Display the current daylight saving start time.
daylight_auto_endtime	string[19]	6/7	Display the current daylight saving end time.
daylight_timezones	string	6/6	List time zone index which support daylight saving time.
updateinterval	0, 3600, 86400, 604800, 2592000	6/6	0 to Disable automatic time adjustment, otherwise, it indicates the seconds between NTP automatic update intervals.
restore	0, <positive integer>	7/6	Restore the system parameters to default values after <value> seconds.
reset	0, <positive integer>	7/6	Restart the server after <value> seconds if <value> is non-negative.
restoreexceptnet	0, <positive integer>	7/6	Restore the system parameters to default values except (ipaddress, subnet, router, dns1, dns2, pppoe). This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined results.
restoreexceptdst	0, <positive integer>	7/6	Restore the system parameters to default values except all daylight saving time settings. This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to default values except for a union of combined results.
restoreexceptlang	0, <positive integer>	7/6	Restore the system parameters to default values except the custom language file the

			<p>user has uploaded.</p> <p>This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined results.</p>
restoreexceptvdp	0, <positive integer>	7/6	<p>Restore the system parameters to default values except the vdp parameters and VADP modules that stored in the system.</p> <p>This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined results.</p>
restoreexceptfocusvalue	0, <positive integer>	7/6	<p>Restore the system parameters to default values except zoom and focus value.</p> <p>This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined results.</p> <p>* Only available when "capability_image_c<0~(n-1)>_remotefocus" != 0.</p>

7.1.1 system.info

Subgroup of **system: info** (The fields in this group are unchangeable.)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
modelName	string[40]	0/7	Internal model name of the server
extendedmodelName	string[40]	0/7	ODM specific model name of server (eg. DCS-5610). If it is not an ODM model, this field will be equal to "modelName"
serialnumber	<mac address>	1/7	12 characters MAC address (without hyphens).
firmwareversion	string[40]	0/7	Firmware version, including model, company, and version number in the

			format: <MODEL-BRAND-VERSION>
language_count	<positive integer>	0/7	Number of webpage languages available on the server.
language_i<0~(count-1)>	string[16] language_i0 : English language_i1 : Deutsch language_i2 : Español language_i3 : Français language_i4 : Italiano language_i5 : 日本語 language_i6 : Português language_i7 : 简体中文 language_i8 : 繁體中文	0/7	Available language lists.
customlanguage_maxcount	0,<positive integer>	0/6	Maximum number of custom languages supported on the server.
customlanguage_count	0,<positive integer>	0/6	Number of custom languages which have been uploaded to the server.
customlanguage_i<0~(maxcount-1)>	string	0/6	Custom language name.

7.2 status

Group: **status**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
di_i<0~(capability_ndi-1)> <product dependent>	<boolean>	1/7	0 => Inactive, normal 1 => Active, triggered (capability.ndi > 0)
do_i<0~(capability_ndo-1)> <product dependent>	<boolean>	1/7	0 => Inactive, normal 1 => Active, triggered (capability.ndo > 0)

onlinenum_rtsp	0,<positive integer>	6/7	Current number of RTSP connections.
onlinenum_httppush	0,<positive integer>	6/7	Current number of HTTP push server connections.
onlinenum_sip	0,<positive integer>	6/7	Current number of SIP connections.
eth_i0	<string>	1/7	Get network information from mii-tool.
vi_i<0~(capability_nvi-1)> <product dependent>	<boolean>	1/7	Virtual input 0 => Inactive 1 => Active (capability.nvi > 0)

7.2.1 status per channel

Group: **status_c<0~(n-1)>** for n channel products

n denotes the value of "capability_nvideoin"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
signal_detect	<boolean>	1/7	Indicates whether the video source is connected or not. * Only available when capability_videoin_type is 0 or 1.
signal_type	ntsc,pal	1/7	The actual modulation type. * Only available when capability_videoin_type is 0 or 1.

7.3 digital input behavior define

Group: **di_i<0~(n-1)>** for n is the value of "capability_ndi" (**capability.ndi > 0**)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
normalstate	high, low	1/1	Indicates open circuit or closed circuit (inactive status)

7.4 digital output behavior define

Group: **do_i<0~(n-1)>** for n is the value of "capability_ndo" (**capability.ndo > 0**)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
normalstate	open,	1/1	Indicate open circuit or closed circuit (inactive)

	grounded		status)
--	----------	--	---------

7.5 security

Group: **security**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
privilege_do	view, operator, admin	1/6	Indicate which privileges and above can control digital output (capability.ndo > 0)
privilege_camctrl	view, operator, admin	1/6	Indicate which privileges and above can control PTZ (capability.ptzenabled > 0 or capability.eptz > 0)
user_i0_name	string[64]	6/7	User name of root
user_i<1~20>_name	string[64]	6/7	User name
user_i0_pass	password[64]	7/6	Root password
user_i<1~20>_pass	password[64]	7/6	User password
user_i0_privilege	view, operator, admin	6/7	Root privilege
user_i<1~20>_privilege	view, operator, admin	6/6	User privilege

7.6 network

Group: **network**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
preprocess	<positive integer>	6/6	<p>An 32-bit integer, each bit can be set separately as follows:</p> <p>Bit 0 => HTTP service;</p> <p>Bit 1=> HTTPS service;</p> <p>Bit 2=> FTP service;</p> <p>Bit 3 => Two way audio and RTSP Streaming service;</p> <p>To stop service before changing its port settings. It's recommended to set this parameter when change a service port to the port occupied by another service currently. Otherwise, the service may fail. Stopped service will auto-start after changing port settings.</p> <p>Ex:</p> <p>Change HTTP port from 80 to 5556, and change RTP port for video from 5556 to 20480. Then, set preprocess=9 to stop both service first.</p> <p>"/cgi-bin/admin/setparam.cgi?network_preprocess=9&network_http_port=5556& network_rtp_videoport=20480"</p>
type	lan, pppoe	6/6	Network connection type.
resetip	<boolean>	6/6	<p>1 => Get ipaddress, subnet, router, dns1, dns2 from DHCP server at next reboot.</p> <p>0 => Use preset ipaddress, subnet, router, dns1, and dns2.</p>
ipaddress	<ip address>	6/6	IP address of server.
subnet	<ip address>	6/6	Subnet mask.
router	<ip address>	6/6	Default gateway.
dns1	<ip address>	6/6	Primary DNS server.

dns2	<ip address>	6/6	Secondary DNS server.
wins1	<ip address>	6/6	Primary WINS server.
wins2	<ip address>	6/6	Secondary WINS server.

7.6.1 802.1x

Subgroup of **network: ieee8021x** (`capability.protocol.ieee8021x > 0`)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable/disable IEEE 802.1x
eapmethod	eap-peap, eap-tls	6/6	Selected EAP method
identity_peap	string[64]	6/6	PEAP identity
identity_tls	string[64]	6/6	TLS identity
password	string[200]	7/6	Password for TLS
privatekeypassword	string[200]	7/6	Password for PEAP
ca_exist	<boolean>	6/6	CA installed flag
ca_time	0,<positive integer>	6/7	CA installed time. Represented in EPOCH
ca_size	0,<positive integer>	6/7	CA file size (in bytes)
certificate_exist	<boolean>	6/6	Certificate installed flag (for TLS)
certificate_time	0,<positive integer>	6/7	Certificate installed time. Represented in EPOCH
certificate_size	0,<positive integer>	6/7	Certificate file size (in bytes)
privatekey_exist	<boolean>	6/6	Private key installed flag (for TLS)
privatekey_time	0,<positive integer>	6/7	Private key installed time. Represented in EPOCH
privatekey_size	0,<positive integer>	6/7	Private key file size (in bytes)

7.6.2 QOS

Subgroup of **network: qos_cos** (`capability.protocol.qos.cos > 0`)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable/disable CoS (IEEE 802.1p)
vlanid	1~4095	6/6	VLAN ID
video	0~7	6/6	Video channel for CoS

audio <product dependent>	0~7	6/6	Audio channel for CoS (capability.naudioin > 0)
eventalarm	0~7	6/6	Event/alarm channel for CoS
management	0~7	6/6	Management channel for CoS
eventtunnel	0~7	6/6	Event/Control channel for CoS

Subgroup of **network: qos_dscp** (capability.protocol.qos.dscp > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable/disable DSCP
video	0~63	6/6	Video channel for DSCP
audio	0~63	6/6	Audio channel for DSCP (capability.naudioin > 0)
eventalarm	0~63	6/6	Event/alarm channel for DSCP
management	0~63	6/6	Management channel for DSCP
eventtunnel	0~63	6/6	Event/Control channel for DSCP

7.6.3 IPV6

Subgroup of **network: ipv6** (capability.protocol.ipv6 > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable IPv6.
addonipaddress	<ip address>	6/6	IPv6 IP address.
addonprefixlen	0~128	6/6	IPv6 prefix length.
addonrouter	<ip address>	6/6	IPv6 router address.
addondns	<ip address>	6/6	IPv6 DNS address.
allowoptional	<boolean>	6/6	Allow manually setup of IP address setting.

7.6.4 FTP

Subgroup of **network: ftp**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	21, 1025~65535	6/6	Local ftp server port.
enable	<boolean>	6/6	Enable ftp.

7.6.5 HTTP

Subgroup of **network**: **http**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	80, 1025 ~ 65535	1/6	HTTP port.
alternateport	1025~65535	6/6	Alternate HTTP port.
authmode	basic, digest	1/6	HTTP authentication mode.
s<0~(capability_nmediastream-1)>_accessname <product dependent>	string[32]	1/6	Http server push access name for stream N, N= 1~ capability.nmediastream. (capability.protocol.spush_mjpeg =1 and capability.nmediastream > 0) The value are shown as video.mjpg = s0_accessname, (stream1) video2.mjpg = s1_accessname, (stream2) video3.mjpg = s2_accessname, (stream3) video4.mjpg = s3_accessname, (stream4) etc.
anonymousviewing	<boolean>	1/6	Enable anonymous streaming viewing.

7.6.6 HTTPS port

Subgroup of **network**: **https** (**capability.protocol.https > 0**)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	443, 1025 ~ 65535	1/6	HTTPS port.

7.6.7 RTSP

Subgroup of **network**: **rtsp** (**capability.protocol.rtsp > 0**)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	554, 1025 ~ 65535	1/6	RTSP port. (capability.protocol.rtsp=1)
anonymousviewing	<boolean>	1/6	Enable anonymous streaming viewing.
authmode	disable, basic, digest	1/6	RTSP authentication mode. (capability.protocol.rtsp=1)

s<0~(capability_nmediastream-1)>_accessname <product dependent>	string[32]	1/6	RTSP access name for stream N, N= 1~ capability.nmediastream. (capability.protocol.spush_mjpeg =1 and capability.nmediastream > 0) The value are shown as live.sdp = s0_accessname, (stream1) live2.sdp = s1_accessname, (stream2) live3.sdp = s2_accessname, (stream3) live4.sdp = s3_accessname, (stream4) etc.
--	------------	-----	--

7.6.7.1 RTSP multicast

Subgroup of **network_rtsp_s<0~(n-1)>**: **multicast** n is stream count

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
alwaysmulticast	<boolean>	4/4	Enable always multicast.
ipaddress	<ip address>	4/4	Multicast video IP address. * We replace "network_rtsp_s<0~(n-1)>_multicast_ipaddress" with " network_rtsp_s<0~(n-1)>_multicast_videoipaddress". * Reserved for compatibility, and suggest don't use this since [httpversion] > 0304a
videoipaddress	<ip address>	4/4	Multicast video IP address. * We support this parameter when the version number (httpversion) is equal or greater than 0304a.
audioipaddress <product dependent>	<ip address>	4/4	Multicast audio IP address. * We support this parameter when the version number (httpversion) is equal or greater than 0304a. * Only available when capability_naudioin > 0
metadataipaddress	<ip address>	4/4	Multicast metadata IP address. * We support this parameter when the version number (httpversion) is equal or greater than 0304a.
videoport	1025 ~ 65535	4/4	Multicast video port.
audioport <product dependent>	1025 ~ 65535	4/4	Multicast audio port. * Only available when capability_naudioin > 0
metadataport	1026~65534	4/4	Multicast metadata port.

tll	1 ~ 255	4/4	Multicasttime to live value.
-----	---------	-----	------------------------------

7.6.8 SIP port

Subgroup of **network: sip** ([capability.protocol.sip > 0](#))

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	1025 ~ 65535	1/6	SIP port.

7.6.9 RTP port

Subgroup of **network: rtp**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
videoport	1025 ~ 65535	6/6	Video channel port for RTP.
audioport	1025 ~ 65535	6/6	Audio channel port for RTP.
metadataport	1025 ~ 65535	6/6	Metadata channel port for RTP.

7.6.10 PPPoE

Subgroup of **network: pppoe** ([capability.protocol.pppoe > 0](#))

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
user	string[128]	6/6	PPPoE account user name.
pass	password[64]	7/6	PPPoE account password.

7.7 IP Filter

Group: **ipfilter**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable access list filtering.
admin_enable	<boolean>	6/6	Enable administrator IP address.
admin_ip	string[43]	6/6	Administrator IP address.
maxconnection	1~10	6/6	Maximum number of concurrent streaming connection(s).
type	0, 1	6/6	Ipfilter policy : 0 => allow 1 => deny
ipv4list_i<0~9>	Single address: <ip address> Network address: <ip address / network mask> Range address: <start ip address - end ip address>	6/6	IPv4 address list.
ipv6list_i<0~9>	string[43]	6/6	IPv6 address list.

7.8 Video input

Group: **videoin**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
cmosfreq	50, 60	4/4	CMOS frequency. * Only available when capability_videoin_type is 2.
whitebalance <product dependent>	auto, manual, rbgain, widerange, outdoor, indoor, sodiumauto, etc (Available values are listed in "capability_image_c<0~(n-1)>_wbmode")	4/4	Modes of white balance. "auto" : Auto white balance "rbgain" : Use rgain and bgain to set white balance manually. "manual" : 2 cases: a. if "rbgain" is not supported, this means keep current white balance status. b. if "rbgain" is supported, "rgain" and "bgain" are updated to the current values which is got from white balance module. Then, act as rbgain mode "widerange" : Auto Tracing White balance (2000K to 10000K). "outdoor" : auto white balance mode specifically for outdoor. "indoor" : auto white balance mode specifically for indoor. "sodiumauto" : sodium vapor lamps. * Only available when "capability_image_c<0~(n-1)>_wbmode" != "_" _
exposurelevel	0~12	4/4	Exposure level "0,12": This range takes the concept from DC's exposure tuning options. The definition is: 0: EV -2.0 1: EV -1.7 2: EV -1.3 3: EV -1.0 4: EV -0.7 5: EV -0.3

			6: EV 0 7: EV +0.3 8: EV +0.7 9: EV +1.0 10: EV +1.3 11: EV +1.7 12: EV +2.0 * Only available when "capability_image_c<0~(n-1)>_exposure_mode" !=0
irismode	fixed, indoor, outdoor <product independent>	4/4	Control DC-Iris mode. "outdoor" : Auto-setting DC-Iris to get best quality, but easy to meet rolling or flicker effect in indoor environment. "indoor" : Avoid rolling and flicker effect first. "fixed" : Open the iris to maximum. * Only available when "capability_image_c<0~(n-1)>_iristype"=dciris
enableblc <Not support anymore>	<boolean>	4/4	Enable backlight compensation. * Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a. * It's recommended to use "exposurewin_c<0~(n-1)>_mode" to switch on/off BLC.
color	0, 1	4/4	0 => monochrome 1 => color * Only available when " capability_videoin_c<0~(n-1)>_color_support" is 1.
flip	<boolean>	4/4	Flip the image.
mirror	<boolean>	4/4	Mirror the image.
rotate	0,90,180,270	1/4	The rotation angle of image. Support only in Rotation mode. * Only available when " capability_videoin_c<0~(n-1)>_rotation"=1
ptzstatus <Not support anymore>	0,<positive integer>	1/7	A 32-bit integer, each bit can be set separately as follows:

			<p>Bit 0 => Support camera control function; 0(not support), 1(support)</p> <p>Bit 1 => Built-in or external camera; 0 (external), 1(built-in)</p> <p>Bit 2 => Support pan operation; 0(not support), 1(support)</p> <p>Bit 3 => Support tilt operation; 0(not support), 1(support)</p> <p>Bit 4 => Support zoom operation; 0(not support), 1(support)</p> <p>Bit 5 => Support focus operation; 0(not support), 1(support)(SD/PZ/IZ series only)</p>
text	string[64]	1/4	Enclose caption.
imprinttimestamp	<boolean>	4/4	Overlay time stamp on video.
minexposure <product dependent>	<p><1~32000>, <5~32000>, <1~8000>, <5~8000>, etc.</p> <p>* Available value is listed in "capability_image_c<0~(n-1)>_exposure_minrange"</p>	4/4	<p>Minimum exposure time</p> <p>1~32000 => 1s ~ 1/32000s</p> <p>5~32000 => 1/5s ~ 1/32000s</p> <p>1~8000 => 1s ~ 1/8000s</p> <p>5~8000 => 1/5s ~ 1/8000s</p> <p>etc.</p> <p>* Only available when "capability_image_c<0~(n-1)>_exposure_minrange" != "-"</p> <p>* Only valid when "piris_mode"=manual or "irismode"=fixed</p> <p>* Only available when "capability_image_c<0~(n-1)>_exposure_range_type" is "twovalues".</p>
maxexposure <product dependent>	<p><1~32000>, <5~32000>, <1~8000>, <5~8000>, etc.</p> <p>* Available value is listed in "capability_image_c<0~(n-1)>_exposure"</p>	4/4	<p>Maximum exposure time</p> <p>1~32000 => 1s ~ 1/32000s</p> <p>5~32000 => 1/5s ~ 1/32000s</p> <p>1~8000 => 1s ~ 1/8000s</p> <p>5~8000 => 1/5s ~ 1/8000s</p> <p>etc.</p> <p>* This parameter may also restrict image frame rate from sensor due to sensor generates a frame per exposure time. Ex: If</p>

	re_maxrange"		<p>this is set to 1/5s ~ 1/8000s and camera takes 1/5s on the night, then sensor only outputs 5 frame/s.</p> <p>* Only available when "capability_image_c<0~(n-1)>_exposure_maxrange" != "-"</p> <p>* Only valid when "piris_mode"=manual or "irismode"=fixed</p> <p>* Only available when "capability_image_c<0~(n-1)>_exposure_rangetype" is "twovalues".</p>
enablepreview	<boolean>	1/4	<p>Usage for UI of exposure settings. Preview settings of video profile.</p> <p>* Only available when "capability_image_c<0~(n-1)>_exposure_mode" !=0</p>

7.8.1 Video input setting per channel

Group: **videoin_c<0~(n-1)>** for n channel products, and m is stream number

n denotes the value of "capability_nvideoin", m denotes the value of "capability_nmediastream"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
cmosfreq	50, 60	4/4	<p>CMOS frequency.</p> <p>* Only available when "capability_videoin_type" is 2</p>
mode	0 ~ "capability_videoin_c<0~(n-1)>_mode"-1	4/4	Indicate the video mode on use.
whitebalance <product dependent>	auto, manual, rbgain, widerange, outdoor, indoor, sodiumauto, etc (Available values are listed in	4/4	<p>Modes of white balance.</p> <p>"auto": Auto white balance</p> <p>"rbgain": Use rgain and bgain to set white balance manually.</p> <p>"manual": 2 cases:</p> <ol style="list-style-type: none"> if "rbgain" is not supported, this means keep current white balance status. if "rbgain" is supported, "rgain" and "bgain" are updated to the current

VIVOTEK

irismode	fixed, indoor,	4/4	Control DC-Iris mode.

	outdoor <product dependent>		<p>"outdoor": Auto-setting DC-Iris to get best quality, but easy to meet rolling or flicker effect in indoor environment.</p> <p>"indoor": Avoid rolling and flicker effect first.</p> <p>"fixed": Open the iris to maximum.</p> <p>* Only available when "capability_image_c<0~(n-1)>_iristype"=dciris</p>
wdrpro_mode <product dependent>	<boolean>	4/4	<p>Enable WDR pro</p> <p>* Only available when "capability_image_c<0~(n-1)>_wdrpro_mode" > 0</p>
wdrpro_strength <product dependent>	1~100	4/4	<p>The strength of WDR Pro.</p> <p>The bigger value means the stronger strength of WDR Pro.</p> <p>* Only available when "capability_image_c<0~(n-1)>_wdrpro_strength" is 1</p>
wdrc_mode <product dependent>	<boolean>	4/4	<p>Enable WDR enhanced.</p> <p>* Only available when "capability_image_c<0~(n-1)>_wdrc_mode" is 1</p>
wdrc_strength <product dependent>	1~100	4/4	<p>The strength of WDR enhanced.</p> <p>The bigger value means the stronger strength of WDR enhanced.</p> <p>* Only available when "capability_image_c<0~(n-1)>_wdrc_mode" is 1</p>
aespeed_mode <product dependent>	<boolean>	4/4	<p>Turning AE converge speed on or off.</p> <p>0: off 1: on</p> <p>* Only available when "capability_image_c<0~(n-1)>_aespeed" is 1</p>
aespeed_speedlevel <product dependent>	1~100	4/4	<p>The speed level of AE converge speed.</p> <p>1~20: level 1 21~40: level 2 41~60: level 3 61~80: level 4</p>

			81~100: level 5 Level 1~4(low ~ high) The higher speed level means shorter AE converged time during AE executing. * Only available when "capability_image_c<0~(n-1)>_aespeed" is 1
aespeed_sensitivity <product dependent>	1~100	4/4	The sensitivity of AE converge speed. 1~20: level 1 21~40: level 2 41~60: level 3 61~80: level 4 81~100: level 5 Level 1~4(low ~ high) The higher sensitivity level means that it is easy to be triggered while scene changed. * Only available when "capability_image_c<0~(n-1)>_aespeed" is 1 and "capability_image_c<0~(n-1)>_aespeedsupport_sensitivity" is 1.
flickerless <product dependent>	<boolean>	4/4	Turn on(1) or turn off(0) the flickerless mode * Only available when "capability_image_c<0~(n-1)>_flickerless" is 1

7.9 Time Shift settings

Group: **timeshift** for n channel products and m stream

n denotes the value of "capability_nvideoin", m denotes the value of "capability_nmediastream"

(capability.timeshift > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	4/4	Enable time shift streaming.
c<0~(n-1)>_s<0~(m-1)>_allow	<boolean>	4/4	Enable time shift streaming for specific stream.

7.10 IR cut control

Group: **ircutcontrol** (`capability_nvideoinprofile > 0` and `capability_daynight_c<0~(n-1)>_support > 0`)

n denotes the value of "capability_nvideoin"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
mode	auto, day, night, di, schedule...etc * Available values are listed in "capability_daynight _c<0~(n-1)>_mode" <product dependent>	6/6	Set IR cut control mode
sir <product dependent>	<boolean>	6/6	Enable/disable Smart IR * Only available when "capability_daynight_c<0~"capability_nvideoi n"-1>_smartir" is 1
daymodebegintime	00:00~23:59	6/6	Day mode begin time
daymodeendtime	00:00~23:59	6/6	Day mod end time
disableirled	<boolean>	6/6	Enable/disable built-in IR led (capability_daynight_c<0~"capability_nvideoi n"-1>_builtinir > 0)
enableextled	<boolean>	1/6	Enable/disable external IR led (capability_daynight_c<0~"capability_nvideoi n"-1>_externalir > 0)
enablewled	<boolean>	6/6	Enable/disable built-in White led (capability_daynight_c<0~"capability_nvideoi n"-1>_builtinwled > 0)
extledmode	do, irring * Available values are listed in "capability_daynight _c<0~(n-1)>_extle d_interface"	6/6	Turn on an external IR led which is mounted do (digital output) device or is a IR ring device. * Only available when "capability_daynight_c<0~"capability_nvideoi n"-1>_externalir" is 1. * Only valid when "ircutcontrol_enableextled"

			is 1.
bwmode	<boolean>	6/6	Switch to B/W in night mode if enabled. * Only available when "capability_daynight_c<0~(n-1)>_blackwhitemode" is 1.
sensitivity	low,normal,high,1~100	6/6	Sensitivity of day/night control. There are two value format: "low,normal,high" : if capability_daynight_c<0~(n-1)>_ircutsensitivity_type=options "1~100" : if capability_daynight_c<0~(n-1)>_ircutsensitivity_type=normalize * Only available when "capability_daynight_c<0~(n-1)>_ircutsensitivity_type" is not "-".

7.11 Image setting per channel

Group: **image_c<0~(n-1)>** for n channel products and m profile

n denotes the value of "capability_nvideoin" and m denotes the value of "capability_nvideoinprofile"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
brightness <Not recommended to use this>	-5~5,100	4/4	-5: Darker <-> 5: Bright 100: Use " image_c<n>_brightnesspercent" * Only available when bit 0 of "capability_image_c<0~(n-1)>_basicsetting" is 1 * We replace "brightness" with "brightnesspercent". * This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.
contrast <Not recommended to use this>	-5~5,100	4/4	-5: Less contrast <-> 5: More contrast 100: Use "

			<p>image_c<0~(n-1)>_contrastpercent"</p> <p>* Only available when bit 1 of "capability_image_c<0~(n-1)>_basicsetting" is 1.</p> <p>* We replace "contrast" with "contrastpercent".</p> <p>* This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.</p>
<p>saturation</p> <p><Not recommended to use this></p>	-5~5,100	4/4	<p>-5: Less saturation <-> 5: More saturation</p> <p>100: Use " image_c<n>_saturationpercent"</p> <p>* Only available when bit 2 of "capability_image_c<0~(n-1)>_basicsetting" is 1.</p> <p>* We replace "saturation" with "saturationpercent".</p> <p>* This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.</p>
<p>sharpness</p> <p><Not recommended to use this></p>	-3~3,100	4/4	<p>-3: Softer <-> 3: Sharper</p> <p>100: Use "</p> <p>image_c<0~(n-1)>_sharpnesspercent"</p> <p>* Only available when bit 3 of "capability_image_c<0~(n-1)>_basicsetting" is 1.</p> <p>* We replace "sharpness" with "sharpnesspercent".</p> <p>* This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.</p>
brightnesspercent	0~100	4/4	<p>Set brightness in the normalized range.</p> <p>0: Darker <-> 100: Bright</p> <p>* Only available when bit 0 of</p>

			"capability_image_c<0~(n-1)>_basicsetting" is 1.
contrastpercent	0~100	4/4	Set contrast in the normalized range. 0: Less contrast <-> 100: More contrast * Only available when bit 1 of "capability_image_c<0~(n-1)>_basicsetting" is 1
saturationpercent	0~100	4/4	Set saturation in the normalized range. 0: Less saturation <-> 100: More saturation * Only available when bit 2 of "capability_image_c<0~(n-1)>_basicsetting" is 1.
sharpnesspercent	0~100	4/4	Set sharpness in the normalized range. 0: Softer <-> 100: Sharper * Only available when bit 3 of "capability_image_c<0~(n-1)>_basicsetting" is 1
gammacurve <product dependent>	0~100	4/4	0: Fine-turned gamma curve by Vivotek. 1: Gamma value = 0.01 2: Gamma value = 0.02 3: Gamma value = 0.03 ... 100: Gamma value = 1 * Note: Although we set gamma value to 100 level, but not all gamma values are valid. Internal module will take the closest valid one. For example, 1~45 may all be mapped to gamma value = 0.45, etc. * Only available when "capability_image_c<0~(n-1)>_gammacurve" is 1
lowlightmode <product dependent>	<boolean>	4/4	Enable/disable low light mode. * Only available when "capability_image_c<0~(n-1)>_lowlightmode" is 1
dnr_mode	<boolean>	4/4	3D noise reduction.

<product dependent>			0:disable 1:enable * Only available when "capability_image_c<0~(n-1)>_dnr" is 1
dnr_strength <product dependent>	1~100	4/4	Strength of 3DNR * Only available when "capability_image_c<0~(n-1)>_dnr" is 1
defog_mode <product dependent>	<boolean>	4/4	Enable/disable defog mode. 0:disable 1:enable * Only available when "capability_image_c<0~(n-1)>_defog_mode " is 1
defog_strength <product dependent>	1~100	4/4	Strength of defog * Only available when "capability_image_c<0~(n-1)>_defog_mode " is 1
eis_mode <product dependent>	<boolean>	4/4	Electronic image stabilizer 0:disable 1:enable * Only available when 'eis' is listed in "capability_image_c<0~(n-1)>_is_mode".
eis_strength <product dependent>	1~100	4/4	Strength of electronic image stabilizer * Only available when 'eis' is listed in "capability_image_c<0~(n-1)>_is_mode".
dis_mode <product dependent>	<boolean>	4/4	Digital image stabilizer 0:disable 1:enable * Only available when 'dis' is listed in "capability_image_c<0~(n-1)>_is_mode".
dis_strength <product dependent>	1~100	4/4	Strength of digital image stabilizer * Only available when 'dis' is listed in "capability_image_c<0~(n-1)>_is_mode".
scene_mode <product dependent>	Available value is listed in "capability_image_c<0~(n-1)>_scenemode_supporttype "	4/4	Value of scene mode * Only available when "capability_image_c<0~(n-1)>_scenemode_support" is 1

	<product dependent>		
restoreatwb	<positive integer>	4/4	Restore of adjusting white balance of image according to mode settings
freeze <product dependent>	<boolean>	4/4	Enable/disable Image freeze while patrolling. 0: disable 1: enable * Only available when "capability_image_c<0~(n-1)>_freeze" is 1
deinterlace_enable	<boolean>	4/4	Enable/disable deinterlace function. 0: disable 1: enable * Only available when "capability_image_c<0~(n-1)>_deinterlace_support" is 1.
deinterlace_mode	spatial,blend	4/4	Users can choose between two different deinterlacing techniques: Spatial mode provides the best image quality, while Blend mode provides better image quality (than not using the deinterlace function at all). * Only available when "capability_image_c<0~(n-1)>_deinterlace_support" is 1.
xoffset	0~100	4/4	Adjusting the image to proper position horizontally. * Only available when the bit 4 of capability_image_c<0~(n-1)>_basicsetting is 1.
yoffset	0~100	4/4	Adjusting the image to proper position vertically. * Only available when the bit 5 of capability_image_c<0~(n-1)>_basicsetting is 1.
lens_alignment	0~100	4/4	Stitch the sensors together into focused position. * Only available when "capability_image_c<0~(n-1)>_lens_alignment" is 1.

lens_ldc_mode	<boolean>	4/4	Enable/disable lens distortion correction. * Only available when "capability_image_c<0~(n-1)>_lens_ldc_support" is 1.
palette_mode	Available value is listed in "capability_image_c<0~(n-1)>_palette_mode"	4/4	Set color palette option. * Only available when "capability_image_c<0~(n-1)>_palette_support" is 1. * Not support "policy=day" anymore when the version number (httpversion) is equal or greater than 0310a.
profile_i<0~(m-1)>_enable	<boolean>	4/4	Enable/disable this profile setting
profile_i<0~(m-1)>_policy	night, schedule	4/4	The mode which the profile is applied to. * Not support "policy=day" anymore when the version number (httpversion) is equal or greater than 0301a.
profile_i<0~(m-1)>_begintime	hh:mm	4/4	Begin time of schedule mode.
profile_i<0~(m-1)>_endtime	hh:mm	4/4	End time of schedule mode.
profile_i<0~(m-1)>_brightness <Not recommended to use this>	-5~5,100	4/4	-5: Darker <-> 5: Bright 100: Use "image_c<0~(n-1)>_brightnesspercent" * Only available when bit 0 of "capability_image_c<0~(n-1)>_basicsetting" is 1 * We replace "profile_i0_brightness" with "profile_i0_brightnesspercent". * This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.
profile_i<0~(m-1)>_contrast <Not recommended to use this>	-5~5,100	4/4	-5: Less contrast <-> 5: More contrast 100: Use "image_c<0~(n-1)>_contrastpercent" * Only available when bit 1 of "capability_image_c<0~(n-1)>_basicsetting" is 1.

			<ul style="list-style-type: none"> * We replace "profile_i0_contrast" with "profile_i0_contrastpercent". * This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.

7.13 Audio input per channel

Group: **audioin_c<0~(n-1)>** for n channel products (**capability.audioin>0**)

n denotes the value of "capability_nvideoin"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
source <Not recommended to use this>	micin, linein <product dependent>	4/4	micin => use built-in microphone input. linein => use external microphone input. * Reserved for compatibility, and suggest don't use this since the version number (httpversion) is equal or greater than 0301a. * We replace "source" with "input". More details, please refer the parameter description of "input".
input	intmic, extmic <product dependent>	4/4	intmic: Internal (built-in) microphone. (Only available when capability_audio_intmic = 1) extmic: External microphone input. (Only available when capability_audio_extmic =1) * Note: If physical microphone switch is showed on product, this value is updated during booting to fit switch status.
volume_internal	0~100	4/4	Volume when take internal microphone as input source. 0: Minimum 100: Maximum * Only available when the channel supports internal microphone (The related bit of "capability_audio_intmic" is equal to 1).

volume_external	0~100	4/4	Volume when take external microphone as input source. 0: Minimum 100: Maximum * Only available when the channel supports external microphone (The related bit of "capability_audio_extmic" is equal to 1).
mute	0, 1	1/4	0: Mute off 1: Mute on
gain <Not recommended to use this>	0~100	4/4	Gain of input. (audioin_c<0~(n-1)>_source = linein) * Reserved for compatibility, and suggest don't use this since the version number (httpversion) is equal or greater than 0301a. * We replace "gain" with "volume_internal" and "volume_external". More details, please refer the parameter description of "volume_internal" and "volume_external".
boostmic <Not recommended to use this>	0~100	4/4	Enable microphone boost. Gain of input. (audioin_c<0~(n-1)>_source = micin) * Reserved for compatibility, and suggest don't use this since the version number (httpversion) is equal or greater than 0301a. * We replace "boostmic" with "volume_internal" and "volume_external". More details, please refer the parameter description of "volume_internal" and "volume_external".
s0_codecstype	aac4, gamr, g711, g726 (Available codec are listed in "capability_audioin_codec")	4/4	Set audio codec type for input. aac4: Advanced Audio Coding (AAC) gamr: Adaptive Multi-Rate (AMR) g711: G.711 g726: G.726
s0_aac4_bitrate	16000, 32000,	4/4	Set AAC4 bitrate in bps.

VIVOTEK

	48000, 64000, 96000, 128000		* Only available if AAC is supported.
s0_gamr_bitrate	4750, 5150, 5900, 6700, 7400, 7950, 10200, 12200	4/4	AMR encoded bitrate in bps. * Only available if AMR is supported.
s0_g711_mode	pcmu, pcma	4/4	Set G.711 companding algorithm. pcmu: μ -law algorithm pcma: A-law algorithm * Only available if G.711 is supported.
s0_g726_bitrate	16000, 24000, 32000, 40000	4/4	Set G.726 encoded bitrate in bps. * Only available if G.726 is supported.
s0_g726_bitstreampackingmode	little, big	4/4	Set G.726 bit streaming packing mode. little: Little-endian bitstream format. big: Big-endian bitstream format. * Only available if G.726 is supported.
s0_g726_vlcmode	0, 1	4/4	Enable vlcmode for G.726. 0: Standard mode. 1: Solve compatibility problem with VLC player. * Only available if G.726 is supported.
aec_enable	<boolean>	4/4	Enable acoustic echo cancellation. * Only available when "capability_audio_aecmode" is "manual". * We support this parameter when the version number (httpversion) is equal or greater than 0306b.
alarm_enable	<boolean>	4/4	Enable audio detection

alarm_level	1~100	4/4	Audio detection alarm level
profile_i0_enable	<boolean>	4/4	Enable/disable this profile setting
profile_i0_policy	night, schedule	4/4	The mode which the profile is applied to. * Not support "policy=day" anymore when the version number (httpversion) is equal or greater than 0301a.
profile_i0_begintime	hh:mm	4/4	Begin time of schedule mode.
profile_i0_endtime	hh:mm	4/4	End time of schedule mode.
profile_i0_alarm_level	1~100	4/4	Audio detection alarm level

7.14 Audio out per channel

Group: **audioout_c<0~(n-1)>** for n channel products (**capability_audio_audioclip=1**)

n denotes the value of "capability_nvideoin"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
volume	0~100	4/4	Adjusting audio volume

7.15 Play an audio clip

Group: **audioclip_i<0~1>** (**capability_audio_audioclip=1**)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	1/4	Specify the audio clip name that can be played when an event occurs.
size	0,<positive integer>	1/4	The size of audio clip.

7.16 Motion detection settings

Group: **motion_c<0~(n-1)>** for n channel products

n denotes the value of "capability_nvideoin"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	4/4	Enable motion detection.
win_sensitivity	0 ~ 100	4/4	Sensitivity of all motion detection windows. * The value "0" is reserved for compatibility and will not be used after the version number (httpversion) is equal or greater than 0400a.

Group: **motion_c<0~(n-1)>_win_i<0~(k-1)>**

n denotes the value of "capability_nvideoin", k denotes the value of "capability_nmotion".

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	4/4	Enable motion detection window.
name	string[14]	4/4	Name of motion window.
polygonstd	0 ~ 9999,0 ~ 9999, 0 ~ 9999,0 ~ 9999, 0 ~ 9999,0 ~ 9999, 0 ~ 9999,0 ~ 9999	4/4	Coordinate of polygon window position. (4 points: x0,y0,x1,y1,x2,y2,x3,y3) * Only available when "capability_motion_wintype" = polygon. * Only available when std is listed in "capability_motion_windomain"
objsize	1 ~ 100	4/4	Percent of motion detection window.
sensitivity <Not recommended to use this>	0 ~ 100	4/4	Sensitivity of motion detection window. * We replace "sensitivity" with "win_sensitivity". * This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.
polygonpx <Not recommended to use this>	0 ~ W,0 ~ H, 0 ~ W,0 ~ H, 0 ~ W,0 ~ H, 0 ~ W,0 ~ H W: 0~ The current image width -1	4/4	Coordinate of polygon window position. (4 points: x0,y0,x1,y1,x2,y2,x3,y3) * Only available when "capability_motion_wintype" = polygon.

	H: 0~ The current image height -1		<ul style="list-style-type: none"> * Only available when px is listed in "capability_motion_windomain". * It's recommended to use polygonsd * This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.

7.17 Tampering detection settings

Group: **tampering_c<0~(n-1)>** for n channel products (**capability.tampering > 0**)

n denotes the value of "capability_nvideoin"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	4/4	Enable or disable tamper detection.
threshold	0~100	4/4	Threshold of tamper detection.
duration	10~600	4/4	If tampering value exceeds the "threshold" for more than "duration" second(s), then tamper detection is triggered.
ignorewidth	0,<positive integer>	1/7	Indicate the width to offset to start to analysis the image.
dark_enable	<boolean>	4/4	Enable or disable image too dark detection
dark_threshold	0~100	4/4	Threshold of image too dark detection
dark_duration	1~10	4/4	If image too dark value exceeds the "threshold" for more than "duration" second(s), then image too dark detection is triggered.
bright_enable	<boolean>	4/4	Enable or disable image too bright detection
bright_threshold	0~100	4/4	Threshold of image too bright detection
bright_duration	1~10	4/4	If image too bright value exceeds the "threshold" for more than "duration"

			second(s), then image too bright detection is triggered.
blurry_enable	<boolean>	4/4	Enable or disable image too blurry detection
blurry_threshold	0~100	4/4	Threshold of image too blurry detection
blurry_duration	1~10	4/4	If image too blurry value exceeds the "threshold" for more than "duration" second(s), then image too blurry detection is triggered.

7.18 DDNS

Group: **ddns** (`capability.protocol.ddns > 0`)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable or disable the dynamic DNS.
provider	CustomSafe100, DyndnsDynamic, DyndnsCustom, Safe100	6/6	Safe100 => safe100.net DyndnsDynamic => dyndns.org (dynamic) DyndnsCustom => dyndns.org CustomSafe100 => Custom server using safe100 method
<provider>_hostname	string[128]	6/6	Your DDNS hostname.
<provider>_usernameemail	string[64]	6/6	Your user name or email to login to the DDNS service provider
<provider>_passwordkey	string[64]	7/6	Your password or key to login to the DDNS service provider.
<provider>_servername	string[128]	6/6	The server name for safe100. (This field only exists if the provider is customsaf100)

7.19 Express link

Group: **expresslink**

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable or disable express link.
state	onlycheck, onlyoffline, checkonline, badnetwork	6/6	Camera will check the status of network environment and express link URL

url	string[64]	6/6	The url user define to link to camera
-----	------------	-----	---------------------------------------

7.20 UPnP presentation

Group: **upnppresentation**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable or disable the UPnP presentation service.

7.21 UPnP port forwarding

Group: **upnpportforwarding**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable or disable the UPnP port forwarding service.
upnpratstatus	0~3	6/7	The status of UPnP port forwarding, used internally. 0 = OK, 1 = FAIL, 2 = no IGD router, 3 = no need for port forwarding

7.22 System log

Group: **syslog**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enableremotelog	<boolean>	6/6	Enable remote log.
serverip	<IP address>	6/6	Log server IP address.
serverport	514, 1025~65535	6/6	Server port used for log.
level	0~7	6/6	Levels used to distinguish the importance of the information: 0: LOG_EMERG 1: LOG_ALERT 2: LOG_CRIT 3: LOG_ERR 4: LOG_WARNING 5: LOG_NOTICE 6: LOG_INFO

			7: LOG_DEBUG
setparamlevel	0~2	6/6	Show log of parameter setting. 0: disable 1: Show log of parameter setting set from external. 2. Show log of parameter setting set from external and internal.

7.23 SNMP

Group: **snmp** ([capability.protocol.snmp > 0](#))

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
v2	<boolean>	6/6	SNMP v2 enabled. 0 for disable, 1 for enable
v3	<boolean>	6/6	SNMP v3 enabled. 0 for disable, 1 for enable
secnamerw	string[31]	6/6	Read/write security name
secnamero	string[31]	6/6	Read only security name
authpwrw	string[8~128]	7/6	Read/write authentication password
authpwro	string[8~128]	7/6	Read only authentication password
authtyperw	MD5,SHA	6/6	Read/write authentication type
authtypero	MD5,SHA	6/6	Read only authentication type
encryptpwrw	string[8~128]	7/6	Read/write passwrd
encryptpwro	string[8~128]	7/6	Read only password
encrypttyperw	DES	6/6	Read/write encryption type
encrypttypero	DES	6/6	Read only encryption type
rwcommunity	string[31]	6/6	Read/write community
rocommunity	string[31]	6/6	Read only community
syslocation	string[128]	6/6	System location
syscontact	string[128]	6/6	System contact

7.24 Layout configuration

Group: **layout**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
logo_default	<boolean>	1/6	0 => Custom logo 1 => Default logo
logo_link	string[128] http://www.vivotek.com	1/6	Hyperlink of the logo
logo_powerbyvvtk_hidden	<boolean>	1/6	0 => display the power by vivotek logo 1 => hide the power by vivotek logo
custombutton_manualtrigger_show	<boolean>	1/6	Show or hide manual trigger (VI) button in homepage 0 -> Hidden 1 -> Visible
theme_option	1~4	1/6	1~3: One of the default themes. 4: Custom definition.
theme_color_font	string[7]	1/6	Font color
theme_color_configfont	string[7]	1/6	Font color of configuration area.
theme_color_titlefont	string[7]	1/6	Font color of video title.
theme_color_controlbackground	string[7]	1/6	Background color of control area.
theme_color_configbackground	string[7]	1/6	Background color of configuration area.
theme_color_videobackground	string[7]	1/6	Background color of video area.
theme_color_case	string[7]	1/6	Frame color

7.25 Privacy mask

Group: **privacymask_c<0~(n-1)>** for n channel products and m privacy mask window.

n denotes the value of "capability_nvideoin" and m denotes the value of

"capability_videoin_c<0~(n-1)>_nprivacymask"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	4/4	Enable privacy mask.

7.26 3D Privacy mask

Group: **privacymask3d_c<0~(n-1)>** for n channel products and m privacy mask window.

(capability_image_c<0~(n-1)>_privacymask_wintype = 3Drectangle)

n denotes the value of "capability_nvideoin" and m denotes the value of "capability_videoin_c<0~(n-1)>_nprivacymask"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	4/4	Enable the 3D privacy mask
color	0~" capability_image_c<0~(n-1)>_privacymask_ncolor"-1	4/4	Privacy mask color
win_i<0~(m-1)>_name	string[40]	4/4	Name of the privacy mask window.
win_i<0~(m-1)>_pan	"capability_ptz_c<0~(n-1)>_minpan" ~ "capability_ptz_c<0~(n-1)>_maxpan"	4/4	Pan position of window position. * Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
win_i<0~(m-1)>_tilt	"capability_ptz_c<0~(n-1)>_mintilt" ~ "capability_ptz_c<0~(n-1)>_maxtilt"	4/4	Tilt position of window position. * Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
win_i<0~(m-1)>_zoom	"capability_ptz_c<0~(n-1)>_minzoom" ~	4/4	Zoom position of window position.

	"capability_ptz_c<0~(n-1)>_maxzoom"		
win_i<0~(m-1)>_fliped	<boolean>	4/4	Flip side of window position. 0: Non-flip side 1: Flip side

7.27 Capability

Group: **capability**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
api_httpversion	<string> This number start with 0301a.	0/7	<p>The version of VIVOTEK WebAPI with 4 integers plus 1 alphabet, There are composed by "major version", "minor version", "revision","_platform". ex: 0301a_1</p> <p><u>Major version</u> Increase the major version when change, remove the old features/interfaces or the firmware has substantially change in architecture and not able to roll back to previous version. This may cause incompatibility with supporting software.</p> <p><u>Minor version</u> Increase the minor version when add new features/interfaces without change the old features and interfaces.</p> <p><u>Revision</u> Increase the revision when fix bugs without change any features of the output.</p> <p><u>_platform</u> This is a constant, it is used to distinguish between different platforms</p> <p><u>API version format:</u> MMmmr_k Where "MM" is the major version, "mm" is the minor version and "r" is the revision. 'M' and 'm' and 'k' are decimal digit from 0 to 9, while 'r' is an alphabetic.</p>

			<p>EX: 0302b_1 => Major version = 03, minor version = 02, revision = b, platform = 1</p> <p>The 4 integer numbers are WebAPI version, we use short name: [httpversion] for it in this document.</p> <p>The 5th character is model-based version for API bug-fix and it's default to "a".</p> <p>Ex: If some APIs in a model does not follow the API definition of 0301a_1, we will fix them and change this API value to 0301b_1.</p>
bootuptime	<positive integer>	0/7	Server bootup time.
nir <Not support anymore>	0, <positive integer>	0/7	<p>Number of IR interfaces.</p> <p>(Recommend to use capability_daynight_c<0~"capability_nvideoin"-1>_builtinir for built-in IR and capability_daynight_c<0~"capability_nvideoin"-1>_externalir for external IR)</p> <p>* Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a.</p>
npir	0, <positive integer>	0/7	Number of PIRs.
ndi	0, <positive integer>	0/7	Number of digital inputs.
nvi	0, <positive integer>	0/7	Number of virtual inputs (manual trigger)
ndo	0, <positive integer>	0/7	Number of digital outputs.
naudioin	0, <positive integer>	0/7	The number of audio input channel. 0 means no audio input support.
naudioout	0, <positive integer>	0/7	The number of audio output channel
nvideoin	<positive integer>	0/7	Number of video inputs.
nvideoout	0, <Positive Integer>	0/7	Number of video out interface.
nvideoinprofile	<positive integer>	0/7	Number of video input profiles.
nmediastream	<positive integer>	0/7	Number of media stream per channels.

VIVOTEK

naudiosetting <Not support anymore>	<positive integer>	0/7	Number of audio settings per channel. * Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a. * We replace "naudiosetting" with "naudioin". More details, please refer the parameter description of "volume_internal" and "volume_external".
nuart	0, <positive integer>	0/7	Number of UART interfaces.
nmotion	<positive integer>	0/7	The number of motion window.
nmotionprofile	0, <positive integer>	0/7	Number of motion profiles.
nrecording	0, <positive integer>	0/7	Number of recording. * We support this parameter when the version number (httpversion) is equal or greater than 0309a.
ptzenabled	0, <positive integer>	0/7	An 32-bit integer, each bit can be set separately as follows: Bit 0 => Support camera control function; 0(not support), 1(support) Bit 1 => (only available when bit0 is 1) Built-in or external video source; 0(external), 1(built-in) Bit 2 => (only available when bit0 is 1) Support pan operation; 0(not support), 1(support) Bit 3 => (only available when bit0 is 1) Support tilt operation; 0(not support), 1(support) Bit 4 => (only available when bit0 is 1) Support zoom operation; 0(not support), 1(support) (only available when RS-485 interface is supported or SD/PZ/PT/PD/video server series) Bit 5 => (only available when bit0 is 1) Support focus operation; 0(not support), 1(support)

			<p>(only available when RS-485 interface is supported or SD/PZ/PT/PD/video server series)</p> <p>Bit 6 => (only available when bit0 is 1) Reserved bit; always 0.</p> <p>Bit 7 => (only available when bit0 is 1) External or built-in PT; 0(built-in), 1(external)</p>
windowless	<boolean>	0/7	Indicate whether to support windowless plug-in.
evctrlchannel	<boolean>	0/7	Indicate whether to support HTTP tunnel for event/control transfer.
joystick	<boolean>	0/7	Indicate whether to support joystick control.
remotefocus <Not recommended to use this>	0, <positive integer>	0/7	<p>An 4-bit integer, which indicates the supportive application of remotefocus.</p> <p>If the value of this parameter is larger than 0, it means that the camera supports remotefocus function.</p> <p>bit 0 => Indicate whether to support both zoom and focus function. bit 1 => Only support zoom function. bit 2 => Only support focus function. bit 3 => Currently, this is a reserved bit, and the default value is 0.</p> <p>* It's strongly non-recommended to use this. * This is reserved for compatibility and will not be used after the version number (httpversion) is equal or greater than 0400a. * We replace "capability_remotefocus" with "capability_image_c0_remotefocus".</p>
npreset	0, <positive integer>	0/7	Number of preset locations
presettourdirection	<boolean>	0/7	<p>Indicate whether to support preset tour direction function. It means users can choose which direction the preset tour goes.</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than</p>

VIVOTEK

			0307a.
eptz	0, <positive integer>	0/7	<p>For "nvideoin" = 1, the definition is as following: A 32-bits integer, each bit can be set separately as follows: Bit 0 => 1st stream supports ePTZ or not. Bit 1 => 2nd stream supports ePTZ or not, and so on.</p> <p>For nvideoin >= 2, the definition is different: First all 32 bits are divided into groups for channel. Ex: nvideoin = 2, bit 0~15 are the 1st group for 1st channel, bit 16~31 are the 2nd group for 2nd channel. nvideoin = 3, bit 0~9 are the 1st group for 1st channel, bit 10~19 are the 2nd group for 2nd channel, bit 20~31 are the 3rd group for 3rd channel. Then, the 1st bit of the group indicates 1st stream of a channel support ePTZ or not. The 2nd bit of the group indicates 2nd stream of a channel support ePTZ or not, and so on.</p> <p>* For most products, the last stream of a channel will not support ePTZ. It is reserved for full view of the channel. For some dual-stream products, both streams support ePTZ.</p>
nanystream	0, <positive integer>	0/7	number of any media stream per channel
iva	<boolean>	0/7	Indicate whether to support Intelligent Video analysis
whitelight <Not recommended to use this>	<boolean>	0/7	<p>Indicate whether to support white light led. * We replace this parameter with "capability_daynight_c<0~(n-1)>_builtinwled" when the version number (httpversion) is equal or greater than 0309d.</p>

iris	<boolean>	0/7	Indicate whether to support iris control.
supportsd	<boolean>	0/7	Indicate whether to support local storage.
fisheye	<boolean>	0/7	The parameter is used to determine whether the product is fisheye or not.
tampering	<boolean>	0/7	Indicate whether to support tampering detection.
tamperingmode	tamper,toodark,toobright,tooblurry	0/7	Available tampering mode list. * Only available when "capability_tampering" is 1.
adaptiverecording	<boolean>	0/7	Indicate whether to support adaptive recording.
adaptivestreaming	<boolean>	0/7	Indicate whether to support adaptive streaming.
supporttriggertypes	seq,boot,motion,networkfail,recnotify,tampering,vi,vadp,di,volalarm,temperature,pir,visignal,backup,smartsd,shockalarm,virestore <product dependent>	0/7	list all the trigger types which are supported in the camera: "seq" = Periodic condition "boot" = System boot "motion" = Video motion detection "networkfail" = network connection failure "recnotify" = Recording notification. "tampering" = Tamper detection. "vi" = Virtual input (Manual trigger) "vadp" = VADP trigger. "di" = Digital input. "volalarm" = Audio detection. "temperature" = Temperature detection. "pir" = PIR detection. "visignal" = Video input signal loss. "backup" = Backing up recorded files. "smartsd" = Lifetime detection of SD card. "shockalarm" = Shock detection. "virestore" = Video input signal restore. * Only available when [httpversion] >= 0301a
storage_dbenabled	<boolean>	0/7	Media files are indexed in database.
protocol_https	< boolean >	0/7	Indicate whether to support HTTP over SSL.
protocol_rtsp	< boolean >	0/7	Indicate whether to support RTSP.
protocol_sip	<boolean>	0/7	Indicate whether to support SIP.
protocol_maxconnection	<positive integer>	0/7	The maximum number of allowed

			simultaneous connections.
protocol_maxgenconnection	<positive integer>	0/7	The maximum general streaming connections .
protocol_rtp_multicast_scalable	<boolean>	0/7	Indicate whether to support scalable multicast.
protocol_rtp_multicast_backchannel	<boolean>	0/7	Indicate whether to support backchannel multicast.
protocol_rtp_tcp	<boolean>	0/7	Indicate whether to support RTP over TCP.
protocol_rtp_http	<boolean>	0/7	Indicate whether to support RTP over HTTP.
protocol_spush_mjpeg	<boolean>	0/7	Indicate whether to support server push MJPEG.
protocol_snmp	<boolean>	0/7	Indicate whether to support SNMP.
protocol_ipv6	<boolean>	0/7	Indicate whether to support IPv6.
protocol_pppoe	<boolean>	0/7	Indicate whether to support PPPoE.
protocol_ieee8021x	<boolean>	0/7	Indicate whether to support IEEE802.1x.
protocol_qos_cos	<boolean>	0/7	Indicate whether to support CoS.
protocol_qos_dscp	<boolean>	0/7	Indicate whether to support QoS/DSCP.
protocol_ddns	<boolean>	0/7	Indicate whether to support DDNS.
videoin_type	0, 1, 2	0/7	0 => Interlaced CCD 1 => Progressive CCD 2 => CMOS
videoin_nresolution	<positive integer>	0/7	This equals "capability_videoin_c0_nresolution". * This is kept for compatibility.
videoin_resolution	A list of <WxH> <product dependent>	0/7	This equals "capability_videoin_c0_resolution". * This is kept for compatibility.
videoin_maxframerate	A list of <Integer>	0/7	This equals "capability_videoin_c0_maxframerate". * This is kept for compatibility.
videoin_mjpeg_maxframe rate	A list of <Integer> and "-"	0/7	This equals "capability_videoin_c0_mjpeg_maxframerate".

			* This is kept for compatibility.
videoin_h264_maxframerate	A list of <Integer> and "-"	0/7	This equals "capability_videoin_c0_h264_maxframerate". * This is kept for compatibility.
videoin_codec	mjpeg, h264, h265 <product dependent>	0/7	Available codec of a device, split by comma. The sequence is not limited. EX: FD8183 supports H.264 and MJPEG, then this is "mjpeg,h264". IP9171 supports H.264, MJPEG and H.265, then this is "mjpeg,h264,h265"
videoin_streamcodec	A list of <Positive Integer>	0/7	This equals "capability_videoin_c0_streamcodec". * This is kept for compatibility.
videoin_flexiblebitrate	<boolean>	0/7	Indicate whether to support flexible bit rate control.
videoout_codec	A list of the available codec types separated by commas <product dependent>	0/7	Available codec list. "-": not supported
timeshift	<boolean>	0/7	Indicate whether to support time shift caching stream.
audio_aec	<boolean>	0/7	Indicate whether to support acoustic echo cancellation.
audio_aecmode	auto, manual	0/7	Indicate the acoustic echo cancellation control mode. "auto" : control by camera automatically. "manual" : Manually turn on/off the control mode. *Only available when "capability_audio_aec" is "1". * We support this parameter when the version number (httpversion) is equal or greater than

			0306b.
audio_aecaffected	-, maxframerate:fixed :15 <product dependent>	0/7	<p>When acoustic echo cancellation function is enabled, some features may become malfunction or be forced to a given value. The affected functions are list here.</p> <p>The format is "Affect API name":"Policy":"Description"</p> <p>"Policy" can be categorized into following groups:</p> <ul style="list-style-type: none"> - (disabled) : UI turns grey and users can't select it. - (unchanged) : UI keeps the status as before and user can't change it. - (hidden) : UI is hidden. - (fixed) : UI is fixed to one selection or value. - (ranged) : UI is fixed to multiple selections or values. - (enabled) : UI is checked. - (notsupport) : the affected function is not available. <p>"Affect API name" can be described in hierarchy, such as "exposurewin.mode.blc:disabled:" which means blc exposure window is disabled. API name can be one word as well, such as "exposurelevel:fixed:6" which means exposurelevel is fixed to level 6.</p> <p>"Description" can be a nonnegative integer or string or NULL.</p> <p>For example: "maxframerate:fixed:15" which means the max frame rate is 15fps when acoustic echo cancellation function is enabled. "- " means no feature is affected.</p> <p>* Only available when "capability_audio_aec" is "1".</p>

			* We support this parameter when the version number (httpversion) is equal or greater than 0306b.
audio_mic <Not support anymore>	<boolean>	0/7	Indicate whether to support built-in microphone input. * Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a. * We replace "audio_mic" with "audio_intmic".
audio_intmic	<0~Positive Integer>	0/7	Internal (Built-in) Microphone. 0: Not support 1: Support Bit 0 for CH0, bit 1 for CH1, and so on.
audio_extmic	<0~Positive Integer>	0/7	External Microphone. 0: Not support 1: Support Bit 0 for CH0, bit 1 for CH1, and so on.
audio_alarm	<0~Positive Integer>	0/7	0: Not support audio alarm. 1: Support audio alarm. Bit 0 for CH0, bit 1 for CH1, and so on.
audio_linein <Not support anymore>	<boolean>	0/7	Indicate whether to support external line input. * Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a. * It will be replaced by audio_intmic and audio_extmic.
audio_lineout	<boolean>	0/7	Indicate whether to support line output.
audio_michardwareswitch	<boolean>	0/7	Indicate whether the hardware supports built-in/external mic switch
audio_headphoneout <Not support anymore>	<boolean>	0/7	Indicate whether to support headphone output. * Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a.
audio_audioclip	<boolean>	0/7	Indicate whether to support audio clip function.

			* We support this parameter when the version number (httpversion) is equal or greater than 0309a.
audioin_codec	aac4, gamr, g711, g726, - <product dependent>	0/7	Available audio codec. We take comma to split codec without any space. "aac4": Advanced Audio Coding (AAC) "gamr": Adaptive Multi-Rate (AMR) "g711": G.711 "g726": G.726 "-": Not supported.
audioout_codec	g711, - <product dependent>	0/7	Available codec list for SIP. "-": Not supported.
motion_wintype	rectangle, polygon,-	0/7	The supported motion window type. "polygon": The window is a 2D polygon shape. "rectangle": The window is a 2D rectangle shape. "-": Not supported.
motion_windomain	qvga, px, std, -	0/7	The domain to set an motion window. "qvga": a 320x240 range to represent the whole image. "px": Locate a window in the image with pixels. "std": A normalized 0~9999 range. "-": Not supported.
smartstream_support	<boolean>	0/7	Indicate whether smart stream is supported.
smartstream_version	<integer>	0/7	Number of smart stream version. * Only available when "capability_smartstream_support" is 1
smartstream_nstream	<positive integer>	0/7	Number of stream that support smart stream. * Only available when "capability_smartstream_support" is 1
smartstream_windomain	qvga, px, std, -	0/7	The domain to set an focus window. "qvga": a 320x240 range to represent the whole image. "px": Locate a window in the image with

			<p>pixels.</p> <p>"std": A normalized 0~9999 range.</p> <p>"-": Not supported.</p> <p>* Only available when "capability_smartstream_support" is 1</p>
smartstream_mode_autotracking	<boolean>	0/7	<p>Indicate whether autotracking smart stream is supported.</p> <p>* Only available when "capability_smartstream_support" is 1</p>
smartstream_mode_manual	<boolean>	0/7	<p>Indicate whether manual smart stream is supported.</p> <p>* Only available when "capability_smartstream_support" is 1</p>
smartstream_mode_hybrid	<boolean>	0/7	<p>Indicate whether hybrid(autotracking+manual) smart stream is supported.</p> <p>* Only available when "capability_smartstream_support" is 1</p>
smartstream_nwindow_autotracking	<positive integer>	0/7	<p>Maximum number of tracking window of autotracking.</p> <p>* Only available when "capability_smartstream_support" is 1</p>
smartstream_nwindow_manual	<positive integer>	0/7	<p>Maximum number of tracking window of manual.</p> <p>* Only available when "capability_smartstream_support" is 1</p>
smartstream_nwindow_hybrid_autotracking	<positive integer>	0/7	<p>Maximum number of tracking window of autotracking in hybrid mode.</p> <p>* Only available when "capability_smartstream_support" is 1</p>
smartstream_nwindow_hybrid_manual	<positive integer>	0/7	<p>Maximum number of tracking window of manual in hybrid mode.</p> <p>* Only available when "capability_smartstream_support" is 1</p>
vadp_supportfeature	<positive integer>	0/7	<p>An 32-bit integer, each bit can be set separately as follows:</p> <p>Bit 0 => VADP interface</p> <p>Bit 1 => Capture video raw data</p> <p>Bit 2 => Support encode jpeg</p> <p>Bit 3 => Capture audio raw data</p> <p>Bit 4 => Support event trigger</p>

VIVOTEK

			<p>Bit 5 => Support license registration</p> <p>Bit 6 => Support shared memory API</p> <p>Bit 7 => Support digital signature of package</p> <p>Bit 8 => Support snapshot</p>
vadp_npackage	<positive integer>	0/7	Indicate the maximum number of VADP package that can be uploaded to the device.
camctrl_httptunnel <Not support anymore>	<boolean>	0/7	<p>Indicate whether to support httptunnel.</p> <p>* Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301b.</p> <p>* It will be replaced by capability_camctrl_ptztunnel.</p>
camctrl_ptztunnel	<boolean>	0/7	<p>Indicate whether to support ptztunnel.</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0301b.</p> <p>This equals "capability_camctrl_c0_ptztunnel".</p> <p>* This is kept for compatibility.</p>
camctrl_privilege	<boolean>	0/7	<p>Indicate whether to support "Manage Privilege" of PTZ control in the security page.</p> <p>1: support both /cgi-bin/camctrl/camctrl.cgi and /cgi-bin/viewer/camctrl.cgi</p> <p>0: support only /cgi-bin/viewer/camctrl.cgi</p> <p>This is equivalent to "capability_camctrl_c0_privilege".</p> <p>* This is kept for compatibility.</p>
uart_httptunnel	<boolean>	0/7	Indicate whether to support HTTP tunnel for UART transfer.
transmission_mode	Tx, Rx, Both	0/7	Indicate transmission mode of the machine: TX = server, Rx = receiver box, Both = DVR.
network_wire	<boolean>	0/7	Indicate whether to support Ethernet.
network_wireless	<boolean>	0/7	Indicate whether to support wireless.
network_dualmode	<boolean>	0/7	Indicate whether network dual mode is supported.

			<p>* Only available when "capability_network_wireless" is "1".</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0305a.</p>
wireless_s802dot11b	<boolean>	0/7	Indicate whether to support wireless 802.11b+.
wireless_s802dot11g	<boolean>	0/7	Indicate whether to support wireless 802.11g.
wireless_s802dot11n	<boolean>	0/7	Indicate whether to support wireless 802.11n.
wireless_beginchannel	1 ~ 14	0/7	Indicate the begin channel of wireless network
wireless_endchannel	1 ~ 14	0/7	Indicate the end channel of wireless network
wireless_encrypt_wep	<boolean>	0/7	Indicate whether to support wireless WEP.
wireless_encrypt_wpa	<boolean>	0/7	Indicate whether to support wireless WPA.
wireless_encrypt_wpa2	<boolean>	0/7	Indicate whether to support wireless WPA2.
wireless_apmode_enable	<boolean>	0/7	<p>Indicate whether wireless AP mode is supported.</p> <p>* Only available when "capability_network_wireless" is "1".</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0305a.</p>
wireless_apmode_ssidprefix	<string>	0/7	<p>Indicate the prefix of broadcasted SSID when camera is in wireless AP mode.</p> <p>* Only available when "capability_wireless_apmode_enable" is "1".</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0305a.</p>
derivative_brand	<boolean>	0/7	Indicate whether to support the upgrade function for the derivative brand. For example, if the value is true, the VVTK product can be upgraded to VVXX. (TCVV<->TCXX is excepted)
test_ac	<boolean>	0/7	Indicate whether to support test ac key.
version_onvifdaemon	<string>	0/7	Indicate ONVIF daemon version

VIVOTEK

version_onviftesttool	<string>	0/7	Indicate ONVIF test tool version
media_totalspace	<positive integer>	0/7	Available memory space (KB) for media.
media_snapshot_maxpre event	<positive integer>	0/7	Maximum snapshot number before event occurred.
media_snapshot_maxpost event	<positive integer>	0/7	Maximum snapshot number after event occurred.
media_snapshot_maxsize	<positive integer>	0/7	Maximum size (KB) of a snapshot.
media_videoclip_maxsize	<positive integer>	0/7	Maximum size (KB) of a videoclip.
media_videoclip_maxlength	<positive integer>	0/7	Maximum length (second) of a videoclip.
media_videoclip_maxpre event	<positive integer>	0/7	Maximum duration (second) after event occurred in a videoclip.
image_iris type <Not recommended to use this>	<string>	0/7	Indicate iris type. <ul style="list-style-type: none"> ● "piris": P-Iris ● "dciris": DC-Iris ● "-": No Iris control support <p>* When "capability_iris"=0, this value must be "-".</p> <p>* Note: For some box-type cameras, this value may be varied depending on mounted lens.</p> <p>* We replace "capability_image_iris" with "capability_image_c0_iris".</p> <p>* Reserved for compatibility, and suggest don't use this since [httpversion] > 0301a</p>
image_focusassist type <Not recommended to use this>	<boolean>	0/7	Indicate whether to support focus assist. <p>* We replace "capability_image_focusassist" with "capability_image_c0_focusassist".</p> <p>* Reserved for compatibility, and suggest don't use this since [httpversion] > 0301a</p>
localstorage_manageable	<boolean>	0/7	Indicate whether manageable local storage is supported. <p>* Only available when "capability_supportsd" is 1 or "capability_storage_dbenabled" is 1.</p>
localstorage_seamless	<boolean>	0/7	Indicate whether seamless recording is supported. <p>* Only available when "capability_supportsd" is 1 or "capability_storage_dbenabled" is 1.</p>

localstorage_modnum	0, <positive integer>	0/7	The maximum MOD connection numbers. * Only available when "capability_supportsd" is 1 or "capability_storage_dbenabled" is 1.
localstorage_modversion	<string>	0/7	Indicate MOD daemon version. * Only available when "capability_supportsd" is 1 or "capability_storage_dbenabled" is 1.
localstorage_stormgrversion	<string>	0/7	Indicate storage manager daemon version. * Only available when "capability_supportsd" is 1 or "capability_storage_dbenabled" is 1.
localstorage_supportededge	0, <positive integer>	0/7	An 32-bit integer, which indicates the supportive application of edge storage. If the value of this parameter is larger than 0, it means that the camera supports edge recording function. bit 0 : It supports to record directly to an on-board SD-Card. bit 1~: Currently, they are reserved bit, and the default value is 0. * Only available when "capability_supportsd" is 1 or "capability_storage_dbenabled" is 1.
localstorage_slconnnum	0,<positive integer>	0/7	The maximum seamless connection number. * Only available when "capability_supportsd" is 1 or "capability_storage_dbenabled" is 1.
localstorage_smartsd	<boolean>	0/7	The "Lifetime and Log SD Card" feature allows users to obtain the card's remaining lifetime information. 0: Non-support this feature 1: Support this feature * Only Sony SD card can support this function now. * Only available when "capability_supportsd" is 1 or "capability_storage_dbenabled" is 1.
remotecamctrl_master	0, <positive integer>	0/7	Indicate whether to support remote auxiliary camera (master side), this value means supporting max number of auxiliary camera.
remotecamctrl_slave	<boolean>	0/7	Indicate whether to support remote camera control (slave side).
fisheyelocaldewarp_c<0~(capability_nvideoin)-1>	0, <positive integer>	0/7	Indicate the supported streams of local dewarp. One bit represents one supported

<product dependent>			stream. The LSB indicates stream 0. Ex: "3" means stream 0 and stream 1 support local dewarp. * Only available when "capability_fisheye" > 0
shockalarm_support	<boolean>	0/7	Indicate whether to support the shock detection. * We support this parameter when the version number (httpversion) is equal or greater than 0306e.
layout_redirection	<string>	0/7	Indicate which function will be redirected to the vadp package path. "-": Not supported. * We support this parameter when the version number (httpversion) is equal or greater than 0309a.

Group: **capability_camctrl_c<0~(n-1)>** n denotes the value of "capability_nvideoin"

(capability_ptzenabled > 0)

* We support this group when the version number (httpversion) is equal or greater than 0303b.

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
ptztunnel	<boolean>	0/7	Indicate whether to support ptztunnel in this video input.
privilege	<boolean>	0/7	Indicate whether to support "Manage Privilege" of PTZ control in the security page in this video input. 1: support both /cgi-bin/camctrl/camctrl.cgi and /cgi-bin/viewer/camctrl.cgi 0: support only /cgi-bin/viewer/camctrl.cgi
rs485	<boolean>	0/7	An 32-bit integer, each bit can be set separately as follows: Bit 0 => support rs485-in Bit 1 => support rs485-out
buildinpt	<boolean>	0/7	An 32-bit integer, each bit can be set separately as follows: Bit 0 => support build-in pan Bit 1 => support build-in tilt

zoommodule	<boolean>	0/7	<p>Indicate whether to support zoom lens. In our product, only SD series and IZ series use the zoom lens.</p> <p>* Both varifocal and zoom lenses are built with movable elements that permit changing the effective focal length. And the key difference between a varifocal and a zoom lens can be explained by thinking about a lens that has been focused on an object at any focal length. A varifocal will need to be refocused whenever the focal length is adjusted; the zoom will stay in focus when the focal length is adjusted.</p>
focusmode	auto,onetimeauto,spotlight,manual <product dependent>	0/7	<p>Focus mode selection:</p> <p>"auto": Camera will automatically adjust the focus position full time to adapt a clear picture.</p> <p>"onetimeauto": Camera will automatically adjust the focus position one time, which follows any PTZ control.</p> <p>"spotlight": Camera will automatically adjust the focus position full time, and to consider a spotlight avoidance situation.</p> <p>"manual": Turn off the automatically focus function. For user to control the focus position manually as their purpose.</p> <p>* Only available when "capability_camctrl_c<0~(n-1)>_zoommodule" is 1.</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0304a.</p>

Group: **capability_ptz_c<0~(n-1)>** n denotes the value of "capability_nvideoin"

If the value of this parameter is larger than 0, it means that the camera supports remotefocus function in this channel. bit 0 => Indicate whether to support both zoom and focus function. bit 1 => Only support zoom function. bit 2 => Only support focus function. bit 3 => Currently, this is a reserved bit, and the default value is 0.
focuswindomain	qvga, px, std, -	0/7	The domain to set a focus window. "qvga" : a 320x240 range to represent the whole image. "px" : Locate a window in the image with pixels. "std" : A normalized 0~9999 range. "-" : Not supported.
focuswindow_nwindow	0,<positive integer>	0/7	Number of focus window
focuswindow_range	<leftrange,rightrange,toprange,lowrange> <product dependent>	0/7	Available range for focuswindow. * We support this parameter when the version number (httpversion) is equal or greater than 0305d. * -: Not supported.
lensconfiguration_support	0,1	0/7	Indicate whether to support different image library configuration files for specific exchangeable lens.
freeze	<boolean>	0/7	0: Non-support image freeze feature 1: Support image freeze feature * We support this parameter when the version number (httpversion) is equal

VIVOTEK

			or greater than 0302a.
autotrack_support	<boolean>	0/7	0: Non-support auto tracking feature 1: Support auto tracking feature * We support this parameter when the version number (httpversion) is equal or greater than 0302a.
smartsensor_iris_total_range	A list of iris value	0/7	Available total step for iris value. * We support this parameter when the version number (httpversion) is equal or greater than 0302a. * Only available when "capability_image_c<0~(n-1)>_sensor_type" is "smartsensor"
deinterlace_support	<boolean>	0/7	Indicate whether to support deinterlace function. * We support this parameter when the version number (httpversion) is equal or greater than 0308a.
deinterlace_mode	spatial, blend	0/7	Spatial mode provides the best image quality, while Blend mode provides better image quality (than not using the deinterlace function at all). * Only available when capability_image_c<0~(n-1)>_deinterlace_support is 1
lens_alignment	<boolean>	0/7	Indicate whether to support lens alignment function. * We support this parameter when the version number (httpversion) is equal or greater than 0309b.
lens_alignment_level	<positive integer>	0/7	The value indicate the support level of alignment. * Only available when "capability_image_c<0~(n-1)>_lens_alignment" is 1.
lens_idc_support	<boolean>	0/7	Indicate whether to support lens distortion correction function. * We support this parameter when the version number (httpversion) is equal or greater than 0309d.

palette_support	<boolean>	0/7	Indicate support color palettes or not. Thermal cameras provide a choice of color palettes on the camera, that help quickly distinguish thermal variations and patterns in an image. The color tones correspond to the apparent surface temperatures of the target. * We support this parameter when the version number (httpversion) is equal or greater than 0310a.
palette_mode	A list of palette options	0/7	Palette options used in thermal surveillance. *Only available when "capability_image_c<0~(n-1)>_palette_support"=1. * We support this parameter when the version number (httpversion) is equal or greater than 0310a.

Group: **capability_peripheral_c<0~(n-1)>** n denotes the value of "capability_nvideoin"

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
devicecontrol	<boolean>	0/7	Indicate whether to support the peripheral device control. * We support this parameter when the version number (httpversion) is equal or greater than 0305c.

7.28 Customized event script

Group: **event_customtaskfile_i<0~2>**

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Custom script identification of this entry.
date	string[4~20]	6/6	Date of custom script.
time	string[4~20]	6/6	Time of custom script.

7.29 Event setting

Group: **event_i**<0~2>

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Identification of this entry.
enable	0, 1	6/6	Enable or disable this event.
priority	0, 1, 2	6/6	Indicate the priority of this event: "0"= low priority "1"= normal priority "2"= high priority
delay	1~999	6/6	Delay in seconds before detecting the next event.
trigger	boot, di, pir, motion, seq, reconfirm, tampering, vi, volalarm, visignal, vadp, smartsd <product dependent>	6/6	Indicate the trigger condition: "boot" = System boot. "di"= Digital input. "pir"= PIR detection. "motion" = Video motion detection. "seq" = Periodic condition. "visignal" = Video input signal loss. "reconfirm" = Recording notification. "tampering" = Tamper detection. "vi"= Virtual input (Manual trigger). "volalarm"= Audio detection. "smartsd"= Lifetime detection of SD card. "shockalarm" = Shock detection. "virestore" = Video input signal restore.
triggerstatus	string[40]	6/6	The status for event trigger
di	0,<positive integer>	6/6	Indicate the source id of di trigger. This field is required when trigger condition is "di". One bit represents one digital input. The LSB indicates DI 0. * Only available when "capability_nda" > 0

mdwin	0,<positive integer>	6/6	<p>Indicate the source window id of motion detection.</p> <p>This field is required when trigger condition is "md".</p> <p>One bit represents one window.</p> <p>The LSB indicates the 1st window.</p> <p>For example, to detect the 1st and 3rd windows, set mdwin as 5.</p>
mdwin0	0,<positive integer>	6/6	<p>Similar to mdwin. The parameter takes effect when profile 1 of motion detection is enabled.</p>
vi	0,<positive integer>	6/6	<p>Indicate the source id of vi trigger.</p> <p>This field is required when trigger condition is "vi".</p> <p>One bit represents one digital input. The LSB indicates VI 0.</p>
vadp <product dependent>	0,<positive integer>	6/6	<p>Indicate the source id of vadp event notification.</p> <p>Each bit corresponds to one vadp source, and the LSB indicates source id 0.</p> <p>For example, to detect event from any one of source id 0, 1 and 3, set vadp to 11.</p> <p>* Only available when vadp is listed in "capability_supporttriggertypes"</p>
valevel	0,1	6/6	<p>Select audio detection event.</p> <p>0: not select 1: select</p>
valevel0	0,1	6/6	<p>Select audio detection profile event.</p> <p>0: not select 1: select</p>
inter	1~999	6/6	<p>Interval of snapshots in minutes.</p> <p>This field is used when trigger condition is "seq".</p>

VIVOTEK

weekday	0~127	6/6	Indicate which weekday is scheduled. One bit represents one weekday. bit0 (LSB) = Saturday bit1 = Friday bit2 = Thursday bit3 = Wednesday bit4 = Tuesday bit5 = Monday bit6 = Sunday For example, to detect events on Friday and Sunday, set weekday as 66.
begintime	hh:mm	6/6	Begin time of the weekly schedule.
endtime	hh:mm	6/6	End time of the weekly schedule. (00:00 ~ 24:00 sets schedule as always on)
lowlightcondition <product dependent>	0, 1	6/6	Switch on white light LED in low light condition 0 => Do action at all times 1 => Do action in low-light conditions
action_do_i<0~(ndo-1)>_enable	<boolean>	6/6	Enable or disable trigger digital output. * Only available when "capability_ndo" > 0
action_do_i<0~(ndo-1)>_duration	1~999	6/6	Duration of the digital output trigger in seconds. * Only available when "capability_ndo" > 0
action_cf_enable	<Boolean>	6/6	Enable or disable sending media to SD card. * Only available when "capability_supportsd" > 0
action_cf_folder	string[128]	6/6	Path to store media. * Only available when "capability_supportsd" > 0
action_cf_media	NULL, 0~4,101	6/6	Index of the attached media. 101 means "Recording Notify" * Only available when "capability_supportsd" > 0
action_cf_datefolder	<boolean>	6/6	Enable this to create folders by date, time, and hour automatically. * Only available when "capability_supportsd" > 0
action_cf_backup	<Boolean>	6/6	Enable or disable the function that send media to SD card for backup if network is disconnected. * Only available when "capability_supportsd" > 0

action_server_i<0~4>_enable	<boolean>	6/6	Enable or disable this server action.
action_server_i<0~4>_media	NULL, 0~4,101	6/6	Index of the attached media. 101 means "Recording Notify"
action_server_i<0~4>_datefolder	<boolean>	6/6	Enable this to create folders by date, time, and hour automatically.
action_goto_enable <product dependent>	<boolean>	6/6	Enable/disable ptz goto preset position on event triggered. * Only available when "capability_ptzenabled" > 0.
action_goto_name <product dependent>	string[40]	6/6	Specify the preset name that ptz goto on event triggered. * Only available when "capability_ptzenabled" > 0.
action_goto_sync <product dependent>	<boolean>	6/6	Capture media after moving to the location. * Only available when the bit4 of capability_ptzenabled is 1 and the bit7 of capability_ptzenabled is 0, or capability_camctrl_c0_zoommodule > 0
action_autotrack_enable <product dependent>	<boolean>	6/6	Enable/disable auto tracking on event triggered. * Only available when the bit4 of capability_ptzenabled is 1 and the bit7 of capability_ptzenabled is 0
action_audioclip_enable	<boolean>	6/6	Enable/disable the function the play an audio clip when an event is triggered. * Only available when "capability_audio_audioclip" is 1.
action_audioclip_media	0,<positive integer>	6/6	Indicate the source id of audioclip event notification. * Only available when "capability_audio_audioclip" is 1.

7.30 Server setting for event action

Group: **server_i**<0~4>

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Identification of this entry
type	email, ftp, http, ns	6/6	Indicate the server type: "email" = email server "ftp" = FTP server "http" = HTTP server "ns" = network storage
http_url	string[128]	6/6	URL of the HTTP server to upload.
http_username	string[64]	6/6	Username to log in to the server.
http_passwd	string[64]	7/6	Password of the user.
ftp_address	string[128]	6/6	FTP server address.
ftp_username	string[64]	6/6	Username to log in to the server.
ftp_passwd	string[64]	7/6	Password of the user.
ftp_port	0~65535	6/6	Port to connect to the server.
ftp_location	string[128]	6/6	Location to upload or store the media.
ftp_passive	<boolean>	6/6	Enable or disable passive mode. 0 = disable passive mode 1 = enable passive mode
email_address	string[128]	6/6	Email server address.
email_sslmode	<boolean>	6/6	Enable support SSL.
email_port	0~65535	6/6	Port to connect to the server.
email_username	string[64]	6/6	Username to log in to the server.
email_passwd	string[64]	7/6	Password of the user.
email_senderemail	string[128]	6/6	Email address of the sender.
email_recipientemail	string[640]	6/6	Email address of the recipient.
ns_location	string[128]	6/6	Location to upload or store the media.
ns_username	string[64]	6/6	Username to log in to the server.
ns_passwd	string[64]	7/6	Password of the user.
ns_workgroup	string[64]	6/6	Workgroup for network storage.

7.31 Media setting for event action

Group: **media_i**<0~4>

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Identification of this entry
type	snapshot, systemlog, videoclip, recordmsg	6/6	Media type to send to the server or store on the server.
snapshot_source	0~"capability_nmediastream"-1	6/6	Indicate the source of media stream. 0 means the first stream. 1 means the second stream and etc. 2 means the third stream and etc. 3 means the fourth stream and etc.
snapshot_prefix	string[16]	6/6	Indicate the prefix of the filename. media_i0=> Snapshot1_ media_i1=> Snapshot2_ media_i2=> Snapshot3_ media_i3=> Snapshot4_ media_i4=> Snapshot5_
snapshot_datesuffix	0, 1	6/6	Add date and time suffix to filename: 1 = Add date and time suffix. 0 = Do not add.
snapshot_preevent	0~" capability_media_snapshot_maxpre event"	6/6	Indicates the number of pre-event images.
snapshot_postevent	0~" capability_media_snapshot_maxpo stevent"	6/6	Indicates the number of post-event images.
videoclip_source	0~"capability_nmediastream"-1	6/6	Indicate the source of media stream. 0 means the first stream. 1 means the second stream and etc. 2 means the third stream and etc. 3 means the fourth stream and etc.
videoclip_prefix	string[16]	6/6	Indicate the prefix of the filename.
videoclip_preevent	0 ~ " capability_media_videoclip_maxpre event"	6/6	Indicates the time for pre-event recording in seconds.

videoclip_maxduration	1 ~ "capability_media_videoclip_maxlength"	6/6	Maximum duration of one video clip in seconds.
videoclip_maxsize	50 ~ "capability_media_videoclip_maxsize"	6/6	Maximum size of one video clip file in Kbytes.

7.32 Recording

Group: **recording_i**<0~1>

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Identification of this entry.
trigger	schedule, networkfail	6/6	The event trigger type schedule: The event is triggered by schedule networkfail: The event is triggered by the failure of network connection.
enable	<boolean>	6/6	Enable or disable this recording.
priority	0, 1, 2	6/6	Indicate the priority of this recording: "0" indicates low priority. "1" indicates normal priority. "2" indicates high priority.
source	0~"capability_nmediastream"-1	6/6	Indicate the source of media stream. 0 means the first stream. 1 means the second stream and so on.
maxretentiontime	<string>	6/6	To specify the expired time for automatic clean up, and it only takes effect for video clip generated by recording_i <0~1>. Format is "P[Y]Y[MM]M[DDD]DT[hh]H[mm]M[ss]S" , similar with ISO8601 with symbols P Ex. P7D, it means 7 days. P1DT10H, it means 1 days and 10 hours. The parameter takes effect when autocleanup_ maxretentiontime_recording_enabled is enabled.

limitsize	<boolean>	6/6	0: Entire free space mechanism 1: Limit recording size mechanism
cyclic	<boolean>	6/6	0: Disable cyclic recording 1: Enable cyclic recording
notify	<boolean>	6/6	0: Disable recording notification 1: Enable recording notification
notifyserver	0~31	6/6	Indicate which notification server is scheduled. One bit represents one application server (server_i0~i4). bit0 (LSB) = server_i0. bit1 = server_i1. bit2 = server_i2. bit3 = server_i3. bit4 = server_i4. For example, enable server_i0, server_i2, and server_i4 as notification servers; the notifyserver value is 21.
weekday	0~127	6/6	Indicate which weekday is scheduled. One bit represents one weekday. bit0 (LSB) = Saturday bit1 = Friday bit2 = Thursday bit3 = Wednesday bit4 = Tuesday bit5 = Monday bit6 = Sunday For example, to detect events on Friday and Sunday, set weekday as 66.
begintime	hh:mm	6/6	Start time of the weekly schedule.
endtime	hh:mm	6/6	End time of the weekly schedule. (00:00~24:00 indicates schedule always on)
prefix	string[16]	6/6	Indicate the prefix of the filename.
cyclesize	100~	6/6	The maximum size for cycle recording in Kbytes when choosing to limit recording size.
reserveamount	0~15000000	6/6	The reserved amount in Mbytes when choosing cyclic recording mechanism.

dest	cf, 0~4	6/6	The destination to store the recorded data. "cf" means local storage (CF or SD card). "0" means the index of the network storage.
cffolder	string[128]	6/6	Folder name.
maxsize	100~2000	6/6	Unit: Mega bytes. When this condition is reached, recording file is truncated.
maxduration	60~3600	6/6	Unit: Second When this condition is reached, recording file is truncated.
adaptive_enable	<boolean>	6/6	Indicate whether the adaptive recording is enabled
adaptive_preevent	0~9	6/6	Indicate when is the adaptive recording started before the event trigger point (seconds)
adaptive_postevent	0~10	6/6	Indicate when is the adaptive recording stopped after the event trigger point (seconds)

7.33 HTTPS

Group: **https** ([capability.protocol.https > 0](#))

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	To enable or disable secure HTTP.
policy	<Boolean>	6/6	If the value is 1, it will force HTTP connection redirect to HTTPS connection
method	auto, manual, install	6/6	auto =>Create self-signed certificate automatically. manual =>Create self-signed certificate manually. install =>Create certificate request and install.
status	-3 ~ 1	6/6	Specify the https status. -3= Certificate not installed -2 = Invalid public key -1 = Waiting for certificate 0= Not installed 1 = Active
countryname	string[2]	6/6	Country name in the certificate information.

stateorprovincename	string[128]	6/6	State or province name in the certificate information.
localityname	string[128]	6/6	The locality name in the certificate information.
organizationname	string[64] VIVOTEK Inc.	6/6	Organization name in the certificate information.
unit	string[64] VIVOTEK Inc.	6/6	Organizational unit name in the certificate information.
commonname	string[64] www.vivotek.com	6/6	Common name in the certificate information.
validdays	0 ~ 3650	6/6	Valid period for the certification.

7.34 Storage management setting

Group: **disk_i<0~(n-1)>** n is the total number of storage devices. (**capability.storage.dbenabled > 0**)

Currently it's only for local storage (SD, CF card), so n is equal to 1.

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
cyclic_enabled	<boolean>	6/6	Enable cyclic storage method.
autocleanup_enabled <Not recommended to use this>	<boolean>	6/6	Enable automatic clean up method. Expired and not locked media files will be deleted. * For forward compatibility reservations, but only group disk_i0_autocleanup is effective. * Not recommended to use this. Please refers "autocleanup" group. * This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.
autocleanup_maxage <Not recommended to use this>	<positive integer>	6/6	To specify the expired days for automatic clean up. * For forward compatibility reservations, but only group disk_i0_autocleanup is effective. * Not recommended to use this. Please refers "autocleanup" group. * This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.

Group: **autocleanup** (**capability.localstorage.supportedge > 0**)

VIVOTEK

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
enabled	<boolean>	6/6	Enable automatic clean up method. Expired and not locked media files will be deleted.
maxretentiontime_recording_enabled	<boolean>	6/6	Enable automatic clean up method for video clip generated by recording task. The parameter takes effect when autocleanup_enabled is enabled.
maxretentiontime_recording_i<0~1>_maxage	<string>	6/6	To specify the expired time for automatic clean up, and it only takes effect for video clip generated by recording_i <0~1>. Format is ''P[Y]Y[MM]M[DDD]DT[hh]H[mm]M[ss]S' , similar with ISO8601 with symbols P Ex. P7D, it means 7 days. P1DT10H, it means 1 days and 10 hours. The parameter takes effect when autocleanup_maxretentiontime_recording_enabled is enabled.
maxretentiontime_others_enabled	<boolean>	6/6	Enable automatic clean up method for all media files except media files generated by recording task. The parameter takes effect when autocleanup_enabled is enabled.

maxretentiontime_others_maxage	<string>	6/6	<p>To specify the expired time for automatic clean up, and it takes effect for all media files except media files generated by recording task.</p> <p>Format is ""P[Y]Y[MM]M[DDD]DT[hh]H[mm]M[ss]S' , similar with ISO8601 with symbols P Ex. P7D, it means 7 days. P1DT10H, it means 1 days and 10 hours.</p> <p>The parameter takes effect when autocleanup_maxretentiontime_others_enabled is enabled.</p>
--------------------------------	----------	-----	--

7.35 Region of interest

Group: **roi_c<0~(n-1)>** for n channel product and m is the index of video stream which support ePTZ.

(capability.eptz > 0 or capability_fisheye = 1)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
s<0~(m-1)>_home	<W,H> <product dependent>	1/6	<p>ROI left-top corner coordinate.* If the minimal window size is 64x64, then the "win_i0_home"=(0~resolution_W-64, 0~resolution_H-64), which the resolution is the value in current stream.</p> <p>* If the stream doesn't support ePTZ, the permissions of this parameter must be set as 1/7.</p>
s<0~(m-1)>_size	<WxH> <product dependent>	1/6	<p>ROI width and height. The width value must be multiples of 16 and the height value must be multiples of 8</p> <p>* The minimal window size is 64x64.</p> <p>* If the stream doesn't support ePTZ, the permissions of this parameter must be set as 1/7.</p>

7.36 ePTZ setting

Group: **eptz_c<0~(n-1)>** for n channel product. (**capability.eptz > 0** or **capability_fisheye = 1**)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
osdzoom <Not recommended to use this>	<boolean>	1/4	Indicates multiple of zoom in is "on-screen display" or not. * Reserved for compatibility, and suggest don't use this since [httpversion] > 0302a * We replace "eptz_c<0~(n-1)>_osdzoom" with "videoin_c<0~(n-1)>_zoomratiodisplay".
smooth	<boolean>	1/4	Enable the ePTZ "move smoothly" feature
tiltspeed	-5 ~ 5	1/4	Tilt speed * Only available when "capability_fisheye" is 1
		1/7	Tilt speed (It should be set by eCamCtrl.cgi rather than by setparam.cgi.)
panspeed	-5 ~ 5	1/4	Pan speed * Only available when "capability_fisheye" is 1
		1/7	Pan speed (It should be set by eCamCtrl.cgi rather than by setparam.cgi.)
zoomspeed	-5 ~ 5	1/4	Zoom speed * Only available when "capability_fisheye" is 1
		1/7	Zoom speed (It should be set by eCamCtrl.cgi rather than by setparam.cgi.)
autospeed	1 ~ 5	1/4	Auto pan/patrol speed * Only available when "capability_fisheye" is 1
		1/7	Auto pan/patrol speed (It should be set by eCamCtrl.cgi rather than by setparam.cgi.)
rotatespeed	1 ~ 5	1/4	Rotate speed (only for Fisheye series) * Only available when "capability_fisheye" is 1 and "capability_fisheylaldewarp_c<0~(n-1)>" is 0

Group: **eptz_c<0~(n-1)>_s<0~(m-1)>** for n channel product and m is the index of video stream which support ePTZ if capability_eptz > 0; m is the index of stream number if capability_fisheye = 1. (**capability_eptz > 0 or capability_fisheye = 1**)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
patrolseq	string[120]	1/4	The patrol sequence of ePTZ. All the patrol position indexes will be separated by ","
patroldwelling	string[160]	1/4	The dwelling time (unit: second) of each patrol point, separated by ",".
preset_i<0~19>_name	string[40]	1/4	Name of ePTZ preset. * Only available when "capability_fisheye" is 1
		1/7	Name of ePTZ preset. (It should be set by ePreset.cgi rather than by setparam.cgi.)
preset_i<0~19>_pos	<W,H> <product dependent>	1/4	Left-top corner coordinate of the preset. * Only available when "capability_fisheye" is 1
		1/7	Left-top corner coordinate of the preset. (It should be set by ePreset.cgi rather than by setparam.cgi.)
preset_i<0~19>_size	<WxH> <product dependent>	1/4	Width and height of the preset. * Only available when "capability_fisheye" is 1
		1/7	Width and height of the preset. (It should be set by ePreset.cgi rather than by setparam.cgi.)

7.37 Focus Window setting

Group: **focuswindow_c<0~(n-1)>** for n channel products

n denotes the value of "capability_nvideoin".

(**capability_image_c<0~(n-1)>_focuswindow_nwindow > 0**)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
win_i0_enable	<boolean>	4/4	Enable or disable the window.
win_i0_home	<W,H> <product dependent>	4/4	Left-top corner coordinate of the window. * If the minimal window size is 192x144, then the "win_i0_home"=(0~resolution_W-192, 0~resolution_H-144), which the resolution is the value in current stream.

win_i0_size	<WxH> <product dependent>	4/4	Width and height of the window. * The minimal window size is 192x144
-------------	------------------------------	-----	---

7.38 Seamless recording setting

Group: **seamlessrecording** (`capability.localstorage.seamless > 0`)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
diskmode	seamless, manageable	1/6	"seamless" indicates enable seamless recording. "manageable" indicates disable seamless recording.
maxconnection	3	1/7	Maximum number of connected seamless streaming.
enable	<boolean>	1/7	Indicate whether seamless recording is recording to local storage or not at present. (Read only)
guid<0~2>_id	string[127]	1/7	The connected seamless streaming ID. (Read only)
guid<0~2>_number	0~3	1/7	Number of connected seamless streaming with guid<0~2>_id. (Read only)

7.39 VIVOTEK Application Development Platformsetting

Group: **vadp**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
version	<string>	6/7	Indicate the VADP version.
resource_total_memory	0,<positive integer>	6/7	Indicate total available memory size for VADP modules.
resource_total_storage	0,<positive integer>	6/7	Indicate total size of the internal storage space for storing VADP modules.
resource_free_memory	0,<positive integer>	6/7	Indicate free memory size for VADP modules.
resource_free_storage	0,<positive integer>	6/7	Indicate current free storage size for uploading VADP modules.
module_number	0,<positive integer>	6/7	Record the total module number that already stored in the system.
module_order	string[40]	6/6	The execution order of the enabled modules.
module_save2sd	<boolean>	6/6	Indicate if the module should be saved to SD

			card when user want to upload it. If the value is false, save module to the internal storage space and it will occupy storage size.
number	string[128]	6/7	This number is used to register license key for VADP application.

Group: **vadp_module_i**<0~(n-1)> for n VADP package number (**capability_vadp_npackage** > 0)

n denotes the value of "capability_vadp_npackage".

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Indicate if the module is enabled or not. If yes, also add the index of this module to the module_order.
name	string[40]	6/6	Module name
extendedname	string[40]	6/6	Extended module name. If this value is not blank, it will be shown on the VADP UI first instead of vadp_module_i<n>_name.
url	string[120]	6/6	Define the URL string after the IP address if the module provides it own web page.
vendor	string[40]	6/6	The provider of the module.
vendorurl	string[120]	6/6	URL of the vendor.
version	string[40]	6/6	Version of the module.
license	string[40]	6/6	Indicate the license status of the module.
licmsg	string[128]	6/6	Indicate the message that will be show on license status when mouse over.
path	string[40]	6/6	Record the storage path of the module.
initscr	string[40]	6/6	The script that will handle operation commands from the system.
status	string[40]	6/6	Indicate the running status of the module.
statmsg	string[128]	6/6	Indicate the message that will be show on the running status when mouse over.
vvtklicensemec	string[40]	6/7	Indicate the module use VIVOTEK license mechanism

Group: **vadp_schedule_i**<0~(n-1)> for n VADP package number

n denotes the value of "capability_vadp_npackage".

(Only available when "capability_vadp_npackage" > 0 and the version number of "vadp_version" >= "1.3.2.0")

NAME	VALUE	SECURITY	DESCRIPTION
------	-------	----------	-------------

		(get/set)	
enable	<boolean>	6/6	Enable or disable the schedule mode to control the execution of the VADP package
begintime	hh:mm	6/6	Begin time of the schedule
endtime	hh:mm	6/6	End time of the schedule

Group: **vadp_event**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
ntrigger	0,<positive integer>	6/7	Indicate the number of topics to be transferred to event manager for trigger.
triggerlist_i<0~(n-1)>_topic	string[256]	6/6	Indicate the event notification with this topic will be transferred to event manager as trigger. n is equal to ntrigger above.

7.40 camera PTZ control

Group: **camctrl** (*capability.camctrl.ptztunnel > 0*)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enableptztunnel	<boolean>	1/4	Enable PTZ tunnel for camera control.

Group: **camctrl_c<0~(n-1)>** for n channel products (*capability.ptzenabled > 0*)

n denotes the value of "capability_nvideoin" and k denotes the value of "capability_npreset"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
panspeed	-5 ~ 5	1/4	Pan speed
tiltspeed	-5 ~ 5	1/4	Tilt speed
zoomspeed	-5 ~ 5	1/4	Zoom speed
focusspeed	-5 ~ 5	1/4	Auto focus speed
patrolseq	string[120]	1/4	(For external device) The indexes of patrol points, separated by ","
patroldwelling	string[160]	1/4	(For external device) The dwelling time of each patrol point, separated by ","
preset_i<0~(k-1)>_name	string[40]	1/4	Name of the preset location.
preset_i<0~(k-1)>_dwelling	0 ~ 999	1/4	The dwelling time of each preset location
uart	0 ~ "	1/4	Select corresponding uart

	capability_nuart"-1		(capability.nuart>0).
cameraid	0~255	1/4	Camera ID controlling external PTZ camera.
isptz	0 ~ 2	1/4	0: disable PTZ commands. 1: enable PTZ commands with PTZ driver. 2: enable PTZ commands with UART tunnel. * Only available when bit7 of capability_ptzenabled is 1
disablemdonptz	<boolean>	1/4	Disable motion detection on PTZ operation.

7.41 camera PTZ control (IZ series)

Group: **camctrl_c<0~(n-1)>** for n channel products (**capability_camctrl_c0_zoommodule = 1 and capability_camctrl_c0_buildinpt = 0**)

n denotes the value of "capability_nvideoin" and k denotes the value of "capability_npreset"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
ccdtype	string[16]	6/7	(Internal used, read only)
motortype	string[16]	6/7	(Internal used, read only)
cameraid	0 ~ 255	1/4	Camera ID controlling external PTZ camera. Note: Please set your speed dome to the appropriate baud rate, and Camera ID, e.g. 2400bps, camera ID 1,2,3,,,,etc. All Camera IDs on the same controlling system (NVR or rs485 keyboard) have to be distinct. Therefore, once you send a controlling signal, each camera will only accept the inputs with the corresponding ID.
panspeed	-5 ~ 5	1/4	Pan speed
tiltspeed	-5 ~ 5	1/4	Tilt speed
zoomspeed	-5 ~ 5	1/4	Zoom speed
autospeed	-5 ~ 5	1/4	Auto pan speed
focusspeed	-5 ~ 5	1/4	Auto focus speed
focusmode	auto, onetimeauto, spotlight, manual * Available values are listed in "capability_camctrl_c<0~	1/4	Indicate the focus control mode.

	(n-1)>_focusmode"		
uart	0 ~ "capability_nuart"-1	1/4	Select corresponding uart (capability.nuart>0).
isptz	0 ~ 2	1/4	0: disable PTZ commands. 1: enable PTZ commands with PTZ driver. 2: enable PTZ commands with UART tunnel. * Only available when bit7 of capability_ptzenabled is 1
preset_i<0~(k-1)>_name	string[40]	1/4	Name of the preset location.
preset_i<0~(k-1)>_zoom	capability_ptz_c<0~(n-1)>_minzoom ~ capability_ptz_c<0~(n-1)>_maxzoom	1/4	Zoom position at each preset location.
preset_i<0~(k-1)>_focus	capability_ptz_c<0~(n-1)>_minfocus ~ capability_ptz_c<0~(n-1)>_maxfocus	1/4	Focus position at each preset location.
preset_i<0~(k-1)>_dwelling	0 ~ 999	1/4	The dwelling time of each preset location
preset_i<0~(k-1)>_focus setting	sync, fixcurrent	1/4	The focus mode of each preset, which is essential and should be grouped with "preset_i<0~(k-1)>_name." * We support this parameter when the version number (httpversion) is equal or greater than 0305b.
patrolseq	string[120]	1/4	(For external device) The indexes of patrol points, separated by ","
patroldwelling	string[160]	1/4	(For external device) The dwelling time of each patrol point, separated by ","
disablemdonptz	<boolean>	1/4	Disable motion detection on PTZ operation.
defaulthome	<boolean>	1/4	This field tells system to use default home position or not.
axisz	capability_ptz_c<0~(n-1)>_minzoom ~ capability_ptz_c<0~(n-1)>	1/4	Custom home zoom position.

	>_maxzoom		
axisf	capability_ptz_c<0~(n-1) >_minfocus ~ capability_ptz_c<0~(n-1) >_maxfocus	1/4	Custom home focus position.
digitalzoom	<boolean>	1/4	Enable/disable digital zoom
zoomenhance	<boolean>	1/4	Enable /disable zoom enhancement
returnhome	<boolean>	1/4	Enable/disable return home while idle.
returnhomeinterval	1~999	1/4	While idle over this time interval, idle action will be taken.
idleaction_enable	<boolean>	1/4	Enable/disable idle action while idle
idleaction_type	home	1/4	This field tells what kind of action should be taken while idle.
idleaction_interval	1~999	1/4	While idle over this time interval, idle action will be taken.

7.42 camera PTZ control (SD series)

Group: **camctrl_c<0~(n-1)>** for n channel products (the bit7 of capability_ptzenabled is 0 and the bit4 of capability_ptzenabled is 1)

n denotes the value of "capability_nvideoin" and k denotes the value of "capability_npreset"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
ccdtype	string[16]	6/7	(Internal used, read only)
motortype	string[16]	6/7	(Internal used, read only)
cameraid	1 ~ 255	1/4	Camera ID controlling external PTZ camera. Note: Please set your speed dome to the appropriate baud rate, and Camera ID, e.g. 2400bps, camera ID 1,2,3,,,,etc. All Camera IDs on the same controlling system (NVR or rs485 keyboard) have to be distinct. Therefore, once you send a controlling signal, each camera will only accept the inputs with the corresponding ID.
panspeed	-5 ~ 5	1/4	Pan speed
tiltspeed	-5 ~ 5	1/4	Tilt speed

VIVOTEK

zoomspeed	-5 ~ 5	1/4	Zoom speed

preset_i<0~(k-1)>_focus	capability_ptz_c<0~(n-1)>_minfocus ~ capability_ptz_c<0~(n-1)>_maxfocus	1/4	Focus position at each preset location.
preset_i<0~(k-1)>_focus setting	sync, fixcurrent	1/4	The focus mode of each preset, which is essential and should be grouped with "preset_i<0~(k-1)>_name." * We support this parameter when the version number (httpversion) is equal or greater than 0305b.
preset_i<0~(k-1)>_fliped	<boolean>	1/4	Flip side at each preset location.
patrol_i<0~39>_name	string[40]	1/4	(For internal device) The name of patrol location
patrol_i<0~39>_dwelling	0 ~ 999	1/4	(For internal device) The dwelling time of each patrol location
disablemndonptz	<boolean>	1/4	Disable motion detection on PTZ operation.
defaulthome	<boolean>	1/4	This field tells system to use default

			home position or not.
axisx	capability_ptz_c<0~(n-1) >_minpan ~ capability_ptz_c<0~(n-1) >_maxpan	1/4	Custom home pan position.
axisy	capability_ptz_c<0~(n-1) >_mintilt ~ capability_ptz_c<0~(n-1) >_maxtilt	1/4	Custom home tilt position.
axisz	capability_ptz_c<0~(n-1) >_minzoom ~ capability_ptz_c<0~(n-1) >_maxzoom	1/4	Custom home zoom position.
axisf	capability_ptz_c<0~(n-1) >_minfocus ~ capability_ptz_c<0~(n-1) >_maxfocus	1/4	Custom home focus position.
axisflip	<boolean>	1/4	Custom home flip side.
returnhome	<boolean>	1/4	Enable/disable return home while idle.
returnhomeinterval	1~999	1/4	While idle over this time interval, idle action will be taken.
digitalzoom	<boolean>	1/4	Enable/disable digital zoom
idleaction_enable	<boolean>	1/4	Enable/disable idle action while idle
idleaction_type	pan,patrol,tour,home,objtrack,prev	1/4	This field tells what kind of action should be taken while idle.
idleaction_interval	1~999	1/4	While idle over this time interval, idle action will be taken.
zoomenhance	<boolean>	1/4	Enable /disable zoom enhancement
tour_index	-1, 0~19	1/4	Index of the enabled tour group, from 0 to 19. Set -1 to disable all the tour groups.
tour_i<0~19>_name	string[40]	1/4	Name of the tour.
tour_i<0~19>_type	<boolean>	1/4	0 = Recorded tour 1 = Preset tour
tour_i<0~19>_speed	-5 ~ 5	1/4	Preset tour: pan and tilt speed when moving between presets. Recorded tour: unnecessary.
tour_i<0~19>_direction	forward,backward,random	1/4	User can choose which direction the preset tour goes.

VIVOTEK

			<p>"forward": preset tour goes in forward order.</p> <p>"backward": preset tour goes in backward order.</p> <p>"random": the presets of the tour will be recalled randomly.</p> <p>* Only available when "capability_presettourdirection" is 1.</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0307a.</p>
tour_i<0~19>_checklist	string[512]	1/4	The indexes of preset positions, separated by ","
tour_i<0~19>_dwelltime	string[512]	1/4	<p>Preset tour: time to wait before moving to the next preset position, separated by ","</p> <p>Recorded tour: number of seconds to wait before continuing a loop tour.</p>

7.43 UART control

Group: **uart** (`capability.nuart > 0` and `capability.fisheye = 0`)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
ptzdrivers_i<0~19, 127>_name	string[40]	1/4	Name of the PTZ driver.
ptzdrivers_i<0~19, 127>_location	string[128]	1/4	Full path of the PTZ driver.
enablehttptunnel	<boolean>	1/4	Enable HTTP tunnel channel to control UART.

Group: **uart_i<0~(n-1)>** n is uart port count (`capability.nuart > 0` and `capability.fisheye = 0`)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
baudrate	300,600,1200,2400 ,4800,9600,19200, 38400,57600,11520 0	4/4	Set baud rate of COM port.
databit	5,6,7,8	4/4	Data bits in a character frame.
paritybit	none, odd, even	4/4	For error checking.
stopbit	1,2	4/4	<p>"1": One stop bit is transmitted to indicate the end of a byte.</p> <p>"2": Two stop bits are transmitted to indicate the end of a byte.</p> <p>If you want to transfer the stopbit for 150% of the normal time used to transfer one bit, the <code>uart_i<0~(n-1)>_stopbit</code> should be set as 2 and the <code>uart_i<0~(n-1)>_databit</code> set as 5 as well.</p>
uartmode	rs485, rs232	4/4	RS485 or RS232.
customdrvcommand_i<0~9>	string[128]	1/4	PTZ command for custom camera.
speedlink_i<0~4>_name	string[40]	1/4	Additional PTZ command name.
speedlink_i<0~4>_cmd	string[40]	1/4	Additional PTZ command list.
ptzdriver	0~19,	1/4	The PTZ driver is used by this COM port.

	127 (custom), 128 (no driver)		
--	----------------------------------	--	--

7.44 UART control (SD series)

Group: **uart_i<0~(n-1)>** n is uart port count (**capability.nuart > 0** and the bit7 of **capability_ptzenabled** is 0, the bit4 of **capability_ptzenabled** is 1)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
cameraid	1~255	4/4	Camera ID controlling external PTZ camera. Note: Please set your speed dome to the appropriate baud rate, and Camera ID, e.g. 2400bps, camera ID 1,2,3,,,,etc. All Camera IDs on the same controlling system (NVR or rs485 keyboard) have to be distinct. Therefore, once you send a controlling signal, each camera will only accept the inputs with the corresponding ID.
baudrate	2400,4800,9600,19200,38400,57600,115200	4/4	Set baud rate of COM port.
databit	5,6,7,8	4/4	Data bits in a character frame.
paritybit	none, odd, even	4/4	For error checking.
stopbit	1,2	4/4	"1" : One stop bit is transmitted to indicate the end of a byte. "2" : Two stop bits are transmitted to indicate the end of a byte. If you want to transfer the stopbit for 150% of the normal time used to transfer one bit, the uart_i<0~(n-1)>_stopbit should be set as 2 and the uart_i<0~(n-1)>_databit set as 5 as well.
uartmode	rs485	4/7	RS485 mode.

7.45 Lens configuration

Group: **lens** for n channel products

n denotes the value of "capability_nvideoin"

(capability.image.c<0~(n-1)>.lensconfiguration.support = 1)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
selected	<string>	6/7	Current selected lens profile. e.g. lens_selected=lens_default_i0, it means chosen lens configuration is i0 lens of default group.

Group: **lens_default**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
totalnumbers	0,<positive integer>	6/7	Total support number of the default lens profiles

Group: **lens_user**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
totalnumbers	0,<positive integer>	6/7	Total support number of the user lens profiles

Group: **lens_default_i<0~(n-1)>**

n denotes the value of "lens_default_totalnumbers"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
name	<string>	6/7	Default lens name

Group: **lens_user_i<0~(n-1)>**

n denotes the value of "lens_user_totalnumbers"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
name	<string>	6/7	User-defined lens name

7.46 Fisheye info

Group: **fisheyeinfo** (*capability.fisheye > 0*)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
revisedcenteraxis	<coordinate>	6/7	The actual center axis coordinate
radius	0, <positive integer>	6/7	The actual center radius

7.47 Fisheye local dewarp setting

Group: **fisheyedewarp_c<0~(n-1)>** (*capability_fisheyelocaldewarp_c<0~(n-1)> > 0*)

n denotes the value of "capability_nvideoin", m denotes the value of "capability_nmediastream"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
panspeed	-5 ~ 5 <integer>	1/4	Pan speed of regional view
tiltspeed	-5 ~ 5 <integer>	1/4	Tilt speed of regional view
zoomspeed	-5 ~ 5 <integer>	1/4	Zoom speed of regional
s<0~(m-2)>_panorama_ panstart	0~359 <integer>	1/4	Initial pan position of panorama view. (only available for 1P and 2P mode at ceiling or floor mount)
s<0~(m-2)>_region_pan	-90~359 <integer>	1/4	Pan home angle of regional view Pan range of ceiling/floor mount is [0~359]. Pan range of wall mount is [-90~90].
s<0~(m-2)>_region_tilt	-90~90 <integer>	1/4	Tilt home angle of regional view Tilt range of ceiling/floor mount is [0~90]. Tilt range of wall mount is [-90~90].
s<0~(m-2)>_region_zoo m	100~300 <integer>	1/4	Zoom home ratio of regional view

7.48 PIR behavior define

Group: **pir** (*capability.npir > 0*)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	1/1	Enable/disable PIR

7.49 Auto tracking setting

Group: **autotrack_c<0~(n-1)>** (*capability_image_c<0~(n-1)>_autotrack_support > 0*)

n denotes the value of "capability_nvideoin"

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
objsize_type	-1~2	1/4	Type of object size. -1 : customized width and height 0 : object size = 30 x 30 1 : object size = 10 x 20 2 : object size = 10 x 10
objsize_customized_width	10~320	1/4	The minimum width of tracking target.
objsize_customized_height	10~240	1/4	The minimum height of tracking target.
sensitivity	0~2	1/4	Tracking sensitivity. 0: Low 1: Medium 2: High

7.50 Wireless

Group: **wireless** (*capability_network_wireless > 0*)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
ssid	string[32]	6/6	SSID for wireless lan settings.
wlmode	Infra, Adhoc	6/6	Wireless mode. Infra: Infrastructure

VIVOTEK

channel	1~11 or 1~13 or 10~11 or 10~13 or 1~14	6/6	A list of WLAN channels. Countries apply their own regulations to the allowable channels. 1~11: USA and Canada 1~13: Europe 10~11: Spain 10~13: France 1~14: Japan * Only valid when "wireless_wlmode" is "Adhoc"
encrypt	none, wep, wpa, wpa2	6/6	Encryption method: none: NONE, wep: WEP, wpa: WPA, wpa2: WPA2PSK
authmode	OPEN, SHARED	6/6	Authentication mode. * Only valid when "wireless_encrypt" is "wep"
keylength	64, 128	6/6	Key length in bits. * Only valid when "wireless_encrypt" is "wep"
keyformat	HEX, ASCII	6/6	Key1 ~ key4 presentation format. * Only valid when "wireless_encrypt" is "wep"
keyselect	1 ~ 4	6/6	Default key number. * Only valid when "wireless_encrypt" is "wep"
key1	password [26]	6/6	WEP key1 for encryption. * Only valid when "wireless_encrypt" is "wep"
key2	password [26]	6/6	WEP key2 for encryption. * Only valid when "wireless_encrypt" is "wep"
key3	password [26]	6/6	WEP key3 for encryption. * Only valid when "wireless_encrypt" is "wep"
key4	password [26]	6/6	WEP key4 for encryption. * Only valid when "wireless_encrypt" is "wep"
algorithm	AES, TKIP	6/6	Algorithm * Only valid when "wireless_encrypt" is "wpa" or "wpa2"
presharedkey	password [64]	6/6	WPA/WPA2PSK mode pre-shared key. * Only valid when "wireless_encrypt" is "wpa" or "wpa2"

7.51 Shock detection

Group: **shock_c<0~(n-1)>** for n channel products

n denotes the value of "capability_nvideoin" (**capability_shockalarm_support > 0**)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
alarm_enable	<boolean>	4/4	Enable shock detection's alarm.
alarm_level	1~100	4/4	The value indicate the support strength level of shock detection's alarm.

8. Useful Functions

8.1 Drive the Digital Output (**capability.ndo > 0**)

Note: This request requires Viewer privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/dido/setdo.cgi?do1=<state>[&do2=<state>]
[&do3=<state>][&do4=<state>]
```

Where state is 0 or 1; "0" means inactive or normal state, while "1" means active or triggered state.

PARAMETER	VALUE	DESCRIPTION
do<num>	0, 1	0 – Inactive, normal state
		1 – Active, triggered state

Example: Drive the digital output 1 to triggered state and redirect to an empty page.

```
http://myserver/cgi-bin/dido/setdo.cgi?do1=1
```

8.2 Query Status of the Digital Input (**capability.ndi > 0**)

Note: This request requires Viewer privileges

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/dido/getdi.cgi?[di0][&di1][&di2][&di3]
```

If no parameter is specified, all of the digital input statuses will be returned.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <length>\r\n
\r\n
[di0=<state>]\r\n
[di1=<state>]\r\n
[di2=<state>]\r\n
[di3=<state>]\r\n
```

where <state> can be 0 or 1.

Example: Query the status of digital input 1 .

Request:

```
http://myserver/cgi-bin/dido/getdi.cgi?di1
```

Response:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: 7\r\n
\r\n
di1=1\r\n
```

8.3 Query Status of the Digital Output (**capability.ndo > 0**)

Note: This request requires Viewer privileges

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/dido/getdo.cgi?[do0][&do1][&do2][&do3]
```

If no parameter is specified, all the digital output statuses will be returned.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <length>\r\n
\r\n
[do0=<state>]\r\n
[do1=<state>]\r\n
[do2=<state>]\r\n
[do3=<state>]\r\n
```

where <state> can be 0 or 1.

Example: Query the status of digital output 1.

Request:

```
http://myserver/cgi-bin/dido/getdo.cgi?do1
```

Response:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: 7\r\n
```

```
\r\n
do1=1\r\n
```

8.4 Capture Single Snapshot

Note: This request requires Normal User privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/viewer/video.jpg?[channel=<value>][&resolution=<value>]
[&quality=<value>][&streamid=<value>]
```

If the user requests a size larger than all stream settings on the server, this request will fail.

PARAMETER	VALUE	DESCRIPTION
channel	0~(capability_nvideoin -1)	The channel number of the video source.
resolution	Available options are list in "capability_videoin_c<0~(n-1)>_resolution". Besides, available options is referred to "capability_videoin_c<0~(n-1)>_maxresolution" and "capability_videoin_c<0~(n-1)>_minresolution"	The resolution of the image.
quality	1~5	The quality of the image.
streamid	0~(capability_nmediastream -1)	The stream number.

The server will return the most up-to-date snapshot of the selected channel and stream in JPEG format. The size and quality of the image will be set according to the video settings on the server.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: image/jpeg\r\n
[Content-Length: <image size>\r\n]
<binary JPEG image data>
```

8.5 Account Management

Note: This request requires Administrator privileges.

Method: POST

Syntax:

```
http://<servername>/cgi-bin/admin/editaccount.cgi?
method=<value>&username=<name>[&userpass=<value>][&privilege=<value>]
[&privilege=<value>][&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
method	add	Add an account to the server. When using this method, the "username" field is necessary. It will use the default value of other fields if not specified.
	delete	Remove an account from the server. When using this method, the "username" field is necessary, and others are ignored.
	edit	Modify the account password and privilege. When using this method, the "username" field is necessary, and other fields are optional. If not specified, it will keep the original settings.
username	<name>	The name of the user to add, delete, or edit.
userpass	<value>	The password of the new user to add or that of the old user to modify. The default value is an empty string.
privilege	view	The privilege of the user to add or to modify. "view" : Viewer privilege.
	operator	"operator" : Operator privilege.
	admin	"admin" : Administrator privilege.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

8.6 System Logs

Note: This request require Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/syslog.cgi
```

Server will return the most up-to-date system log.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <syslog length>\r\n
\r\n
<system log information>\r\n
```

8.7 Upgrade Firmware

Note: This request requires Administrator privileges.

Method: POST

Syntax:

```
http://<servername>/cgi-bin/admin/upgrade.cgi
```

Post data:

```
fimage=<file name>[&return=<return page>]\r\n
\r\n
<multipart encoded form data>
```

Server will accept the file named <file name> to upgradethe firmware and return with <return page> if indicated.

8.8 ePTZ Camera Control (**capability.eptz > 0 and capability_fisheye = 0**)

Note: This request requires camctrl privileges.

Method: GET/POST

Syntax:

```

http://<servername>/cgi-bin/camctrl/eCamCtrl.cgi?channel=<value>&stream=<value>
[&move=<value>] - Move home, up, down, left, right
[&auto=<value>] - Auto pan, patrol
[&zoom=<value>] -Zoom in, out
[&zooming=<value>&zs=<value>] -Zoom without stopping, used for joystick
[&x=<value>&y=<value>&w=<value>&h=<value>&resolution=<value>] - Zoom in, out on a specific area
[&vx=<value>&vy=<value>&vs=<value>] - Shift without stopping, used for joystick
[&x=<value>&y=<value>&videosize=<value>&resolution=<value>&stretch=<value>] -Click on image
(Move the center of image to the coordination (x,y) based on resolution or videosize.)
[ [&speedpan=<value>][&speedtilt=<value>][&speedzoom=<value>][&speedapp=<value>] ] - Set speeds
[&return=<return page>]

```

Example:

```

http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=0&move=right
http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=1&vx=2&vy=2&vz=2
http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=1&x=100&y=100&videosize=640x480&resolution=640x480&stretch=0

```

In zoom operation, there are two ways to control it, scale zoom and area zoom.

1. [Scale zoom]: contains two control method, relative movement and continuous movement

a. relative movement -

If you trigger a relative movement, it will only zoom certain ratio and stop by itself.

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=tele>

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=wide>

The zoom ratio to move by relative movement is according to the setting of speedzoom [-5~5].

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&speedzoom=5>

b. continuous movement -

If you trigger a continuous movement, you have to handle the stop time by yourself.

A continuous movement is convenient to integrate a joystick control.

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zooming=tele&zs=1>

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zooming=wide&zs=5>

zooming is used to indicate the moving direction, and zs is used to indicate the speed.

To stop a continuous movement, you have to use the command as below:

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=stop&zs=0>

2. [Area zoom]: it means to zoom in on a specific area, here is an example for a directly moving

[x, y] is the desired coordinate, and it will be the center after movement

[w, h] is the scaled area size

[resolution] is the base range of this coordinate system

The example shows [w, h] = [864, 488], which means to zoom in to ratio x2.2 based on [1920x1080].

Pay attention to that [x, y, w, h] are essential parameters in an area zoom case, and the stream index is counted from 0 as the first stream.

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=0&x=912&y=297&w=864&h=488&resolution=1920x1080>

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of video source.
stream	<0~(m-1)>	Stream.
move	home	Move to home ROI.
	up	Move up.
	down	Move down.
	left	Move left.
	right	Move right.
auto	pan	Auto pan.
	patrol	Auto patrol.
	stop	Stop auto pan/patrol.
zoom	wide	Zoom larger view with current speed.
	tele	Zoom further with current speed.
zooming	wide or tele	Zoom without stopping for larger view or further view with zs speed, used for joystick control.
zs	0 ~ 6	Set the speed of zooming, "0" means stop.
x	<integer>	The desired coordinate, and it will be the center after movement
y	<integer>	
w	<integer>	The scaled area size
h	<integer>	
resolution	<window size>	The resolution of streaming.

vx	<integer>	The direction of movement, used for joystick control.
vy	<integer>	
vs	0 ~ 7	Set the speed of movement, "0" means stop.
x	<integer>	x-coordinate clicked by user. It will be the x-coordinate of center after movement.
y	<integer>	y-coordinate clicked by user. It will be the y-coordinate of center after movement.
videosize	<window size>	The size of plug-in (ActiveX)window in web page
resolution	<window size>	The resolution of streaming.
stretch	<boolean>	0 indicates that it uses resolution (streaming size) as the range of the coordinate system. 1 indicates that it uses videosize (plug-in size) as the range of the coordinate system.
speedpan	-5 ~ 5	Set the pan speed.
speedtilt	-5 ~ 5	Set the tilt speed.
speedzoom	-5 ~ 5	Set the zoom speed.
speedapp	1 ~ 5	Set the auto pan/patrol speed.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

8.9 ePTZ Recall (**capability.eptz > 0 and capability_fisheye = 0**)

Note: This request requires camctrl privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/camctrl/eRecall.cgi?channel=<value>&stream=<value>&recall=<value>[&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of the video source.
stream	<0~(m-1)>	Stream.
recall	Text string less than 40 characters	One of the present positions to recall.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

8.10 ePTZ Preset Locations(**capability.eptz > 0 and capability_fisheye = 0**)

Note: This request requires Operator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/operator/ePreset.cgi?channel=<value>&stream=<value>[&addpos=<value>][&delpos=<value>][&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of the video source.
stream	<0~(m-1)>	Stream.
addpos	<Text string less than 40 characters>	Add one preset location to the preset list.

delpos	<Text string less than 40 characters>	Delete preset location from the preset list.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

8.11 IP Filtering for ONVIF

Syntax: <product dependent>

<pre>http://<servername>/cgi-bin/admin/ipfilter.cgi?type[=<value>] http://<servername>/cgi-bin/admin/ipfilter.cgi?method=add<v4/v6>&ip=<ipaddress>[&index=<value>][&return=<return page>] http://<servername>/cgi-bin/admin/ipfilter.cgi?method=del<v4/v6>&index=<value>[&return=<return page>]</pre>		
PARAMETER	VALUE	DESCRIPTION
type	NULL	Get IP filter type
	allow, deny	Set IP filter type
method	addv4	Add IPv4 address into access list.
	addv6	Add IPv6 address into access list.
	delv4	Delete IPv4 address from access list.
	delv6	Delete IPv6 address from access list.
ip	<IP address>	Single address: <IP address> Network address: <IP address / network mask> Range address: <start IP address - end IP address>
index	<value>	The start position to add or to delete.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

8.12 UART HTTP Tunnel Channel (**capability.nuart > 0**)

Note: This request requires Operator privileges.

Method: GET and POST

Syntax:

```
http://<servername>/cgi-bin/operator/uartchannel.cgi?[channel=<value>]
```

```
-----
```

```
GET /cgi-bin/operator/uartchannel.cgi?[channel=<value>]
```

```
x-sessioncookie: string[22]
```

```
accept: application/x-vvtk-tunnelled
```

```
pragma: no-cache
```

```
cache-control: no-cache
```

```
-----
```

```
POST /cgi-bin/operator/uartchannel.cgi
```

```
x-sessioncookie: string[22]
```

```
content-type: application/x-vvtk-tunnelled
```

```
pragma : no-cache
```

```
cache-control : no-cache
```

```
content-length: 32767
```

```
expires: Sun, 9 Jan 1972 00:00:00 GMT
```

User must use GET and POST to establish two channels for downstream and upstream. The x-sessioncookie in GET and POST should be the same to be recognized as a pair for one session. The contents of upstream should be base64 encoded to be able to pass through a proxy server.

This channel will help to transfer the raw data of UART over the network.

Please see UART tunnel spec for detail information

PARAMETER	VALUE	DESCRIPTION
channel	0 ~ (n-1)	The channel number of UART.

8.13 Event/Control HTTP Tunnel Channel (**capability.**

evctrlchannel > 0)

Note: This request requires **Administrator** privileges.

Method: GET and POST

Syntax:

```
http://<servername>/cgi-bin/admin/ctrlvent.cgi
```

```
-----  
GET /cgi-bin/admin/ctrlvent.cgi
```

```
x-sessioncookie: string[22]
```

```
accept: application/x-vvtk-tunnelled
```

```
pragma: no-cache
```

```
cache-control: no-cache
```

```
-----  
POST /cgi-bin/admin/ctrlvent.cgi
```

```
x-sessioncookie: string[22]
```

```
content-type: application/x-vvtk-tunnelled
```

```
pragma : no-cache
```

```
cache-control : no-cache
```

```
content-length: 32767
```

```
expires: Sun, 9 Jan 1972 00:00:00 GMT
```

User must use GET and POST to establish two channels for downstream and upstream. The x-sessioncookie in GET and POST should be the same to be recognized as a pair for one session. The contents of upstream should be base64 encoded to be able to pass through the proxy server.

This channel will help perform real-time event subscription and notification as well as camera control more efficiently. The event and control formats are described in another document.

See Event/control tunnel spec for detail information

8.14 Get SDP of Streams

Note: This request requires Viewer access privileges.

Method: GET/POST

Syntax:

```
http://<servername>/<network_rtsp_s<0~m-1>_accessname>
```

“m” is the stream number.

“network_accessname_<0~(m-1)>” is the accessname for stream “1” to stream “m”. Please refer to the “subgroup of network: rtsp” for setting the accessname of SDP.

You can get the SDP by HTTP GET.

When using scalable multicast, Get SDP file which contains the multicast information via HTTP.

8.15 Open the Network Stream

Note: This request requires Viewer access privileges.

Syntax:

For HTTP push server (MJPEG):

```
http://<servername>/<network_http_s<0~m-1>_accessname>
```

For RTSP (MP4), the user needs to input theURL below into an RTSP compatible player.

```
rtsp://<servername>/<network_rtsp_s<0~m-1>_accessname>
```

“m” is the stream number.

For details on streaming protocol, please refer to the “control signaling” and “data format” documents.

8.16 Senddata (capability.nuart > 0)

Note: This request requires Viewer privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/viewer/senddata.cgi?
[com=<value>][&data=<value>][&flush=<value>] [&wait=<value>] [&read=<value>]
```

PARAMETER	VALUE	DESCRIPTION
com	1 ~ <max. com port number>	The target COM/RS485 port number.
data	<hex decimal data>[,<hex decimal data>]	The <hex decimal data> is a series of digits from 0 ~ 9, A ~ F. Each comma separates the commands by 200 milliseconds.
flush	yes,no	yes: Receive data buffer of the COM port will be cleared before read. no: Do not clear the receive data buffer.
wait	1 ~ 65535	Wait time in milliseconds before read data.
read	1 ~ 128	The data length in bytes to read. The read data will be in the return page.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <system information length>\r\n
\r\n
<hex decimal data>\r\n
```

Where hexadecimal data is digits from 0 ~ 9, A ~ F.

8.17 Storage managements (**capability.storage.dbenabled > 0**)

Note: This request requires **administrator** privileges.

Method: GET and POST

Syntax:

```
http://<servername>/cgi-bin/admin/lscrtl.cgi?cmd=<cmd_type>[&<parameter>=<value>...]
```

The commands usage and their input arguments are as follows.

PARAMETER	VALUE	DESCRIPTION
cmd_type	<string>	Required. Command to be executed, including <i>search</i> , <i>insert</i> , <i>delete</i> , <i>update</i> , and <i>queryStatus</i> .

Command: **search**

PARAMETER	VALUE	DESCRIPTION
label	<integer primary key>	Optional. The integer primary key column will automatically be assigned a unique integer.
triggerType	<text>	Optional. Indicate the event trigger type. Please embrace your input value with single quotes. Ex. mediaType='motion' Support trigger types are product dependent.
mediaType	<text>	Optional. Indicate the file media type. Please embrace your input value with single quotes. Ex. mediaType='videoclip' Support trigger types are product dependent.
destPath	<text>	Optional. Indicate the file location in camera. Please embrace your input value with single quotes. Ex. destPath ='/mnt/auto/CF/NCMF/abc.mp4'
resolution	<text>	Optional. Indicate the media file resolution. Please embrace your input value with single quotes. Ex. resolution='800x600'
isLocked	<boolean>	Optional.

		<p>Indicate if the file is locked or not.</p> <p>0: file is not locked.</p> <p>1: file is locked.</p> <p>A locked file would not be removed from UI or cyclic storage.</p>
triggerTime	<text>	<p>Optional.</p> <p>Indicate the event trigger time. (not the file created time)</p> <p>Format is "YYYY-MM-DD HH:MM:SS"</p> <p>Please embrace your input value with single quotes.</p> <p>Ex. triggerTime='2008-01-01 00:00:00'</p> <p>If you want to search for a time period, please apply "TO" operation.</p> <p>Ex. triggerTime='2008-01-01 00:00:00'+TO+'2008-01-01 23:59:59' is to search for records from the start of Jan 1st2008to the end of Jan 1st 2008.</p>
limit	<positive integer>	<p>Optional.</p> <p>Limit the maximum number of returned search records.</p>
offset	<positive integer>	<p>Optional.</p> <p>Specifies how many rows to skip at the beginning of the matched records.</p> <p>Note that the offset keyword is used after limit keyword.</p>

To increase the flexibility of search command, you may use "OR" connectors for logical "OR" search operations. Moreover, to search for a specific time period, you can use "TO" connector.

Ex. To search records triggered by motion or di or sequential and also triggered between 2008-01-01 00:00:00 and 2008-01-01 23:59:59.

```
http://<servername>/cgi-bin/admin/lscrtl.cgi?cmd=search&triggerType='motion'+OR+'di'+OR+'seq'&triggerTime='2008-01-01 00:00:00'+TO+'2008-01-01 23:59:59'
```

Command: **delete**

PARAMETER	VALUE	DESCRIPTION
label	<integer primary key>	<p>Required.</p> <p>Identify the designated record.</p> <p>Ex. label=1</p>

Ex. Delete records whose key numbers are 1, 4, and 8.

```
http://<servername>/cgi-bin/admin/lscrtl.cgi?cmd=delete&label=1&label=4&label=8
```

Command: **update**

PARAMETER	VALUE	DESCRIPTION
-----------	-------	-------------

VIVOTEK

label	<integer primary key>	Required. Identify the designated record. Ex. label=1
isLocked	<boolean>	Required. Indicate if the file is locked or not.

Ex. Update records whose key numbers are 1 and 5 to be locked status.

```
http://<servername>/cgi-bin/admin/lscrtl.cgi?cmd=update&isLocked=1&label=1&label=5
```

Ex. Update records whose key numbers are 2 and 3 to be unlocked status.

```
http://<servername>/cgi-bin/admin/lscrtl.cgi?cmd=update&isLocked=0&label=2&label=3
```

Command: queryStatus

PARAMETER	VALUE	DESCRIPTION
retType	xml or javascript	Optional. Ex. retype=javascript The default return message is in XML format.

Ex. Query local storage status and call for javascript format return message.

```
http://<servername>/cgi-bin/admin/lscrtl.cgi?cmd=queryStatus&retType=javascript
```

8.18 Virtual input (**capability.nvi > 0**)

Note: Change virtual input (manual trigger) status.

Method: GET

Syntax:

```
http://<servername>/cgi-bin/admin/setvi.cgi?vi0=<value>[&vi1=<value>][&vi2=<value>]
[&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
vi<num>	state[(duration)nstate] Where "state" is 0, 1. "0" means inactive or normal state while "1" means active or triggered state. Where "nstate" is next state after duration.	Ex: vi0=1 Setting virtual input 0 to trigger state Ex: vi0=0(200)1 Setting virtual input 0 to normal state, waiting 200 milliseconds , setting it to trigger state. Note that when the virtual input is waiting for next state, it cannot accept new requests.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

Return Code	Description
200	The request is successfully executed.
400	The request cannot be assigned, ex. incorrect parameters. Examples: setvi.cgi?vi0=0(10000)1(15000)0(20000)1 No multiple duration. setvi.cgi?vi3=0 VI index is out of range. setvi.cgi?vi=1 No VI index is specified.
503	The resource is unavailable, ex. Virtual input is waiting for next state. Examples: setvi.cgi?vi0=0(15000)1 setvi.cgi?vi0=1

Request 2 will not be accepted during the execution time(15 seconds).

8.19 Open Timeshift Stream (**capability.timeshift > 0**, **timeshift_enable=1, timeshift_c<n>_s<m>_allow=1**)

Note: This request requires Viewer access privileges.

Syntax:

For HTTP push server (MJPEG):

<pre>http://<servername>/<network_http_s<m>_accessname>?maxsft=<value>[&tsmode=<value>&reftime=<value>&forcechk&minsft=<value>]</pre>

For RTSP (MP4 and H264), the user needs to input the URL below into an RTSP compatible player.

<pre>rtsp://<servername>/<network_rtsp_s<m>_accessname>?maxsft=<value>[&tsmode=<value>&reftime=<value>&forcechk&minsft=<value>]</pre>

“n” is the channel index.

“m” is the timeshift stream index.

For details on timeshift stream, please refer to the “TimeshiftCaching” documents.

PARAMETER	VALUE	DEFAULT	DESCRIPTION
maxsft	<positive integer>	0	Request cached stream at most how many seconds ago.
tsmode	normal, adaptive	normal	Streaming mode: normal => Full FPS all the time. adaptive => Default send only I-frame for MP4 and H.264, and send 1 FPS for MJPEG. If DI or motion window are triggered, the streaming is changed to send full FPS for 10 seconds. (*Note: this parameter also works on non-timeshift streams.)
reftime	mm:ss	The time camera receives the request.	Reference time for maxsft and minsft. (This provides more precise time control to eliminate the inaccuracy due to network latency.) Ex: Request the streaming from 12:20 rtsp://10.0.0.1/live.sdp?maxsft=10&reftime=12:30
forcechk	N/A	N/A	Check if the requested stream enables timeshift, feature and if minsft is achievable. If false, return “415 Unsupported Media Type”.
minsft	<positive integer>	0	How many seconds of cached stream client can accept at least. (Used by forcechk)

Return Code	Description
400 Bad Request	Request is rejected because some parameter values are illegal.
415 Unsupported Media Type	Returned, if forcechk appears, when minsft is not achievable or the timeshift feature of the target stream is not enabled.

8.20 RemoteFocus

(capability_image_c<0~(n-1)>_remotefocus=1)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/remotefocus.cgi?function=<value>[&direction=<value>]  
[&position=<value>][&steps=<value>][&iris]
```

PARAMETER	VALUE	DESCRIPTION
-----------	-------	-------------

<p>function</p>	<p>zoom, focus, auto, scan, stop, positioning, getstatus</p>	<p>Function type</p> <p>zoom - Move focus motor focus - Move focus motor auto - Perform auto focus scan - Perform focus scan stop - Stop current operation positioning - Position the motors</p> <p>getstatus-Information of motors, return value as below: remote_focus_zoom_motor_max: Maximum steps of zoom motor remote_focus_focus_motor_max: Maximum steps of focus motor remote_focus_zoom_motor_start: Start point of zoom motor remote_focus_zoom_motor_end: End point of zoom motor remote_focus_focus_motor_start: Start point of effective focal length remote_focus_focus_motor_end: End point of effective focal length remote_focus_zoom_motor: Current position of zoom motor remote_focus_focus_motor: Current position of focus motor remote_focus_zoom_enable: Current function of zoom motor remote_focus_focus_enable: Current function of focus motor remote_focus_iris_open: The current status of iris. 0: irisenable, 1: irisopen</p> <p>Current function of zoom/focus motor, return value as below: 0: no service 1: zooming 2. focusing 3: auto focus 4: focus scan 5: positioning (both zoom motor and focus motor) 12: reset focus</p>
<p>direction</p>	<p>direct, forward, backward</p>	<p>Motor's moving direction. It works only if function= zoom focus.</p>
<p>position</p>	<p>0~<motor_max></p>	<p>Motor's position. It works only if function=zoom focus and direction=direct. <motor_max> is refer to remote_focus_focus_motor_max or remote_focus_zoom_motor_max which replied from "function=getstatus"</p>

VIVOTEK

steps	1 ~ <motor_max>	<p>Motor's moving steps.</p> <p>It works only if function=zoom focus and direction=forward backward.</p> <p><motor_max> is refer to remote_focus_focus_motor_max or remote_focus_zoom_motor_max which replied from "function=getstatus"</p> <p>* This parameter is for additional fine-tune, the value is from 1 to 30.</p>
iris	N/A	<p>Open iris or not.</p> <p>It works only if function=auto scan.</p>

8.21 BackFocus (**capability_image_c<0~(n-1)>_remotefocus=4**)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/remotefocus.cgi?function=<value>[&direction=<value>]  
[&position=<value>][&steps=<value>][&iris]
```

PARAMETER	VALUE	DESCRIPTION
-----------	-------	-------------

VIVOTEK

function	focus, auto, scan, stop, positioning, irisopen, irisenable, resetfocus, getstatus	<p>Function type</p> <p>focus – Move focus motor</p> <p>auto – Perform auto focus</p> <p>scan – Perform focus scan</p> <p>stop – Stop current operation</p> <p>positioning – Position the motors</p> <p>resetfocus – reset focus position to default</p> <p>irisopen – Fully open iris. It will maintain this status until sending irisenable cgi.</p> <p>irisenable – leave fully open iris and return back to previous status</p> <p>getstatus–Information of motors, return value as below:</p> <p>remote_focus_focus_motor_max: Maximum steps of focus motor</p> <p>remote_focus_focus_motor_start: Start point of effective focal length</p> <p>remote_focus_focus_motor_end: End point of effective focal length</p> <p>remote_focus_focus_motor: Current position of focus motor</p> <p>remote_focus_focus_enable: Current function of focus motor</p> <p>remote_focus_iris_open: The current status of iris. 0: irisenable, 1: irisopen</p> <p>Current function of zoom/focus motor, return value as below:</p> <p>0: no service</p> <p>1: zooming</p> <p>2. focusing</p> <p>3: auto focus</p> <p>4: focus scan</p> <p>5: positioning (both zoom motor and focus motor)</p> <p>12: reset focus</p>
direction	direct, forward, backward	<p>Motor's moving direction.</p> <p>It works only if function= focus.</p>
position	0~<motor_max>	<p>Motor's position.</p> <p>It works only if function=focus and direction=direct.</p> <p><motor_max> is refer to remote_focus_focus_motor_max which replied from "function=getstatus"</p>

steps	1 ~ <motor_max>	Motor's moving steps. It works only if function=focus and direction=forward backward. <motor_max> is refer to remote_focus_focus_motor_max which replied from "function=getstatus" * This parameter is for additional fine-tune, the value is from 1 to 30.
iris	N/A	Open iris or not. It works only if function=auto scan.

8.22 Export Files

Note: This request requires Administrator privileges.

Method: GET

Syntax:

For daylight saving time configuration file:

```
http://<servername>/cgi-bin/admin/exportDst.cgi
```

For language file:

```
http://<servername>/cgi-bin/admin/export_language.cgi?currentlanguage=<value>
```

PARAMETER	VALUE	DESCRIPTION
currentlanguage	0~20	Available language lists. Please refer to: system_info_language_i0 ~ system_info_language_i19.

For setting backup file:

```
http://<servername>/cgi-bin/admin/export_backup.cgi?backup
```

8.23 Upload Files

Note: This request requires Administrator privileges.

Method: POST

Syntax:

For daylight saving time configuration file:

```
http://<servername>/cgi-bin/admin/upload_dst.cgi
```

Post data:

```
filename = <file name>\r\n\r\n<multipart encoded form data>
```

For language file:

```
http://<servername>/cgi-bin/admin/upload_lan.cgi
```

Post data:

```
filename = <file name>\r\n\r\n<multipart encoded form data>
```

For setting backup file:

```
http://<servername>/cgi-bin/admin/upload_backup.cgi
```

Post data:

```
filename = <file name>\r\n\r\n<multipart encoded form data>
```

Server will accept the file named <file name> to upload this one to camera.

8.24 Update Lens Configuration

(capability_image_c<0~(n-1)>_lensconfiguration_support > 0)

Note: This request requires Administrator privileges.

Method: GET

Syntax:

For list a name of lens currently used:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?get_currentlens
```

For list all names of lens installed in camera:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?list_lens
```

For choose selected lens configuration:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?choose_lens=<value>
```

You need to reboot manually after you choose another lens configuration.

For choose selected lens configuration and reboot camera:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?choose_reboot_lens=<value>
```

The camera will reboot after using this cgi.

For delete selected lens configuration:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?delete_lens=<value>
```

PARAMETER	VALUE	DESCRIPTION
value	<string>	Available lens name. Please refer to: lens_default_i<0~(n-1)>_name lens_user_i<0~(n-1)>_name n is a positive integer.

Method: POST

Syntax:

For upload user-defined lens configuration:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?upload_lens
```

Post data:

```
upload_lens_profile_input = <file name>\r\n
\r\n
<multipart encoded form data>
```

Server will accept the file named <file name> to upload the lens profile to camera.

8.25 Media on demand (**capability.localstorage.modnum > 0**)

Media on demand allows users to select and receive/watch/listen to metadata/video/audio contents on demand.

Note: This request requires Viewer access privileges.

Syntax:

```
rtsp://<servername>/mod.sdp? [&stime=<value>] [&etime=<value>] [&length=<value>] [&loctime
=<value>] [&file=<value>] [&tsmode=<value>]
```

PARAMETER	VALUE	DEFAULT	DESCRIPTION
stime	<YYYYMMDD_HHMMSS.MMM>	N/A	Start time.
etime	<YYYYMMDD_HHMMSS.MMM>	N/A	End time.
length	<positive integer>	N/A	The length of media of interest. The unit is second.
loctime	<boolean>	0	Specify if start/end time is local time format. 1 for local time, 0 for UTC+0
file	<string>	N/A	The media file to be played.
tsmode	<positive integer>	N/A	Timeshift mode, the unit is second.

Ex.

stime	etime	length	file	Description
V	V	X	X	Play recordings between stime and etime rtsp://10.10.1.2/mod.sdp?stime=20110312_040400.000&etime=2011_0312_040510.000
V	X	V	X	Play recordings for length seconds which start from stime rtsp://10.10.1.2/mod.sdp?stime=20110312_040400.000&length=120
X	V	V	X	Play recordings for length seconds which ends at etime rtsp://10.10.1.2/mod.sdp?etime=20110312_040400.000&length=120
X	X	X	V	Play file file rtsp://10.10.1.2/mod.sdp?filename=/mnt/link0/

8.26 Fisheye local dewarp camera control (**capability.fisheye > 0** and **capability.fisheye.localdewarp.c0 > 0**, only support in 1R mode)

Note: This request requires camctrl privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/camctrl/fdCamCtrl.cgi?channel=<value>&stream=<value>
[&move=<value>] - Move home, up, down, left, right
[&zoom=<value>] - Zoom wide, tele
[[&speedpan=<value>][&speedtilt=<value>][&speedzoom=<value>]] - Set speeds
[&zooming=<value>&zs=<value>] - Zoom without stopping, used for joystick
[&vx=<value>&vy=<value>&vs=<value>] - Shift without stopping, used for joystick
[&x=<value>&y=<value>&videosize=<value>&resolution=<value>&stretch=<value>] - Click on image (Move
the center of image to the coordination (x,y) based on resolution or videosize of 10 mode.)
[&return=<return page>]
```

Example:

```
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&move=right
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&zoom=tele
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&move=top&speedtilt=-1
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&zooming=tele&zs=2
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&vx=5&vy=3&vs=2
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&x=700&y=700&videosize=1920x1920&r
esolution=1920x1920&stretch=1
```

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of video source.
stream	<0~(m-1)>	Stream.
move	home	Move to home position.
	up	Move up.
	down	Move down.
	left	Move left.
	right	Move right.

VIVOTEK

zoom	wide	Zoom larger view with current speed.
	tele	Zoom further with current speed.
speedpan	-5 ~ 5	Set the pan speed of current command.
speedtilt	-5 ~ 5	Set the tilt speed of current command.
speedzoom	-5 ~ 5	Set the zoom speed of current command.
zooming	wide or tele	Zoom without stopping for larger view or further view with zs speed, used for joystick control.
zs	0 ~ 6	Set the speed of zooming, "0" means stop.
vx	-6 ~ 6	The direction of movement, used for joystick control.
vy	-6 ~ 6	
vs	0 ~ 7	Set the speed of movement, "0" means stop.
x	<integer>	x-coordinate clicked by user. It will be the x-coordinate of center after movement.
y	<integer>	y-coordinate clicked by user. It will be the y-coordinate of center after movement.
videosize	<window size>	The size of plug-in (ActiveX) window in web page of 10 content.
resolution	<window size>	The resolution of streaming of 10 content.
stretch	<boolean>	0 indicates that it uses resolution (streaming size) as the range of the coordinate system. 1 indicates that it uses videosize (plug-in size) as the range of the coordinate system.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

8.27 3D Privacy Mask

(capability_image_c<0~(n-1)>_privacymask_wintype =

3Drectangle) n denotes the value of "capability_nvideoin"

Note: This request requires admin user privilege

Method: GET/POST

Syntax:

http://<servername>/cgi-bin/admin/setpm3d.cgi?method=<value>&maskname=<value>&[maskheight=<value>&maskwidth=<value>&videosize=<value>&return=<return page>]

PARAMETER	VALUE	DESCRIPTION
method	add	Add a 3D privacy mask at current location
	delete	Delete a 3D privacy mask
	edit	Edit a 3D privacy mask
maskname	string[40]	3D privacy mask name
maskheight	integer	3D privacy mask height
maskwidth	integer	3D privacy mask width
videosize	<window size>	Optimal. The size of plug-in (ActiveX) window in web page is the size of the privacy window size. This field is not necessary, it will use the default value if not specified. 320x180 for 16:9 resolution and 320x240 for 4:3 resolution.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

8.28 Camera Control

(capability_camctrl_c<0~(n-1)>_zoommodule = 1)

Note: This request requires Viewer privileges.

Method: GET/POST

Syntax: **(for control API)**

```
http://<servername>/cgi-bin/camctrl/camctrl.cgi?[channel=<value>][&camid=<value>]
[&move=<value>] - Move home, up, down, left, right
[&focus=<value>] - Focus operation
[&zoom=<value>] - Zoom in, out
[&zooming=<value>&zs=<value>] - Zoom without stopping, used for joystick
[&vx=<value>&vy=<value>&vs=<value>] - Shift without stopping, used for joystick
[&x=<value>&y=<value>&videosize=<value>&resolution=<value>&stretch=<value>] - Click on image
(Move the center of image to the coordination (x,y) based on resolution or videosize.)
[ [&speedpan=<value>][&speedtilt=<value>][&speedzoom=<value>][&speedapp=<value>][&speedlink=<value>] ] - Set speeds
[&return=<return page>]
```

Example:

<http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&move=right>

<http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&zoom=tele>

<http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&x=300&y=200&resolution=704x480&videosize=704x480&stretch=1>

Example: (set the ptz preset with focus mode)

* We support this function when the version number of the PTZ control module is equal or greater than 5.0.0.20.

<http://myserver/cgi-bin/camctrl/camctrl.cgi?name=xxx&focussetting=sync&cam=getsetpreset>

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of video source.
camid	0,<positive integer>	Camera ID.
move	home	Move to camera to home position.
	up	Move camera up.
	down	Move camera down.
	left	Move camera left.
	right	Move camera right.

speedpan	-5 ~ 5	Set the pan speed.
speedtilt	-5 ~ 5	Set the tilt speed.
speedzoom	-5 ~ 5	Set the zoom speed.
speedfocus	-5 ~ 5	Set the focus speed.
speedapp	-5 ~ 5	Set the auto pan/patrol speed.
auto	pan	Auto pan.
	patrol	Auto patrol.
	stop	Stop camera.
zoom	wide	Zoom larger view with current speed.
	tele	Zoom further with current speed.
	stop	Stop zoom.
zooming	wide or tele	Zoom without stopping for larger view or further view with zs speed, used for joystick control.
zs	0 ~ 8 <SD8362>	Set the speed of zooming, "0" means stop.
vx	<integer , excluding 0>	The slope of movement = vy/vx, used for joystick control.
vy	<integer>	
vs	0 ~ 127	Set the speed of movement, "0" means stop.
x	<integer>	x-coordinate clicked by user. It will be the x-coordinate of center after movement.
y	<integer>	y-coordinate clicked by user. It will be the y-coordinate of center after movement.
videosize	<window size>	The size of plug-in (ActiveX) window in web page
resolution	<window size>	The resolution of streaming.
stretch	<boolean>	0 indicates that it uses resolution (streaming size) as the range of the coordinate system. 1 indicates that it uses videosize (plug-in size) as the range of the coordinate system.
focus	auto	Auto focus.
	far	Focus on further distance.
	near	Focus on closer distance.
focussetting	sync	Applies the selected focus mode in camctrl_c<0~(n-1)>_focusmode to this preset.
	fixcurrent	Applies the current focus position to this preset.

		* We support this function when the version number of the PTZ control module is equal or greater than 5.0.0.20.
cam	getsetpreset	Adds a named preset at current position, and return the preset index. * We support this function when the version number of the PTZ control module is equal or greater than 5.0.0.20.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

Syntax: **(for querying API)**

```
http://<servername>/cgi-bin/camctrl/camctrl.cgi?[<parameter>] [&<parameter>...]
```

Example:

```
http://myserver/cgi-bin/camctrl/camctrl.cgi?getpan
```

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
pan=4117\r\n
```

PARAMETER	VALUE	DESCRIPTION
getversion	<string>	Get the version of the PTZ control module.
getaction	idle, autopan, tracking, tour, patrol,	Get the current status of the camera. * We support this parameter when the version number (getversion) is equal or greater than 5.0.0.12
getpan	0, <positive integer>	Get the current pan position. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getpanangle	<integer>	Get the current pan angle. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
gettilt	0, <positive integer>	Get the current tilt position. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"

gettiltangle	<integer>	Get the current tilt angle. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getzoom	0, <positive integer>	Get the current zoom position.
getratio	<decimal>	Get the current zoom ratio.
getfocus	0, <positive integer>	Get the current focus position.
getminspeedlv	0, <positive integer>	Get the minimum speed level of the PTZ control. Normally, the speed level is '0,' which denotes halting a continuous movement.
getmaxptspeedlv	0, <positive integer>	Get the maximum speed level of pan/tilt moving. *Only available when "capability_camctrl_c<0~(n-1)>_buildinpt" > 0
getmaxzspeedlv	0, <positive integer>	Get the maximum speed level of zoom moving.
getmaxfspeedlv	0, <positive integer>	Get the maximum speed level of focus moving.
getminpan	0, <positive integer>	Get the lower limit for pan position. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getmaxpan	0, <positive integer>	Get the upper limit for pan position. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getminpanangle	<integer>	Get the lower limit for pan angle. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getmaxpanangle	<integer>	Get the upper limit for pan angle. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getmintilt	0, <positive integer>	Get the lower limit for tilt position. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getmaxtilt	0, <positive integer>	Get the upper limit for tilt position. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getmintiltangle	<integer>	Get the lower limit for tilt angle. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getmaxtiltangle	<integer>	Get the upper limit for tilt angle. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
getminzoom	0, <positive integer>	Get the lower limit for zoom position.
getmaxzoom	0, <positive integer>	Get the upper limit for zoom position.
getmaxdzoom	0, <positive integer>	Get the upper limit for digital zoom position.

getmaxratio	<decimal>	Get the maximum ratio of optical zoom. * We support this parameter when the version number (getversion) is equal or greater than 5.0.0.14
getmaxdratio	<decimal>	Get the maximum ratio of digital zoom. * We support this parameter when the version number (getversion) is equal or greater than 5.0.0.14
getminfocus	0, <positive integer>	Get the lower limit for focus position.
getmaxfocus	0, <positive integer>	Get the upper limit for focus position.

8.29 Recall (**capability_camctrl_c<0~(n-1)>_zoommodule = 1**)

Note: This request requires Viewer privileges.

Method: GET

Syntax:

```
http://<servername>/cgi-bin/viewer/recall.cgi?
recall=<value>[&channel=<value>][&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
recall	string[30]	One of the present positions to recall.
channel	0~"capability_nvideoin"-1	Channel of the video source.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

8.30 Preset Locations

(capability_camctrl_c<0~(n-1)>_zoommodule = 1)

Note: This request requires Operator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/operator/preset.cgi?[channel=<value>]
[&addpos=<value>][&delpos=<value>][&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
addpos	string[30]	Add one preset location to the preset list.
channel	0~"capability_nvideoin"-1	Channel of the video source.
delpos	string[30]	Delete preset location from preset list.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page. * If the <return page> is invalid path, it will ignore this parameter.

8.31 SmartSD (**capability_localstorage_smartsd > 0**)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/smartsd.cgi?function=<value>
```

PARAMETER	VALUE	DESCRIPTION
-----------	-------	-------------

function	getstatus	<p>Function type</p> <p>getstauts : Information of smartSD internal status return value as below:</p> <p>smartsd_lifetime_num: Accumulated amount of data that has been written</p> <p>smartsd_lifetime_den: Card-guaranteed amount of data that can be written</p> <p>smartsd_lifetime_rate: The ratio of smartsd_lifetime_num to smartsd_lifetime_den. It means the accumulated percentage amount of flash block has been written. The range is from 0 to 100 (unit: %). The SD card is recommended to be replaced if the percentage reaches above 90%.</p> <p>smartsd_spare_block_rate: Usage rate of spare blocks. It means the usage percentage of total spare block. The range is from 0 to 100 (unit: %). The SD card is recommended to be replaced if the percentage reaches above 90%.</p> <p>smartsd_data_size_per_unit: Size (in sectors) of data to be written when Life Information1 is updated.</p> <p>smartsd_num_of_sudden_power_failure: Indicates how many times power disconnection occurred during write/erase operations</p> <p>smartsd_operation_mode: Enables/disables power-off detection and write error notification</p> <p>smartsd_attached: Indicate the smartSD is attached or not.</p>
----------	-----------	--

8.32 Connect to AP (**capability_network_wireless > 0**)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/connect_ap.cgi
```

PARAMETER	VALUE	DESCRIPTION
N/A	N/A	Apply the wireless settings and connect to AP.

8.33 Get wireless information (**capability_network_wireless > 0**)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/getwirelessinfo.cgi
```

PARAMETER	VALUE	DESCRIPTION
N/A	N/A	Get wireless information. Camera will return following information. <ol style="list-style-type: none"> 1. Wireless channel 2. Link quality 3. Signal level 4. Noise level 5. SNR 6. TX Rate 7. RX Rate

8.34 Get wireless signal strength (**capability_network_wireless >**

0)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/getwlsignalstrength.cgi
```

PARAMETER	VALUE	DESCRIPTION
N/A	N/A	Get wireless signal strength.

8.35 WPS transaction (**capability_network_wireless > 0)**

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/start_wps.cgi
```

PARAMETER	VALUE	DESCRIPTION
N/A	N/A	Start WPS transaction.

8.36 Peripheral control (**capability_peripheral_c<0~(n-1)>_devicecontrol > 0)**

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax: (**for control API**)

```
http://<servername>/cgi-bin/admin/peripheral.cgi?channel=<value>&operation=set
[&washer_mode=<value>] - Set washer mode
[&washer_status=<value>] - Set washer status
[&washer_dwellingtime=<value>] - Set washer clean time
[&heater_status=<value>] - Set heater status
```

Example:

VIVOTEK

http://myserver/cgi-bin/admin/peripheral.cgi?channel=0&operation=set&washer_mode=wiper&washer_status=on

Response:

HTTP/1.0 200 OK\r\n

Cache-control: no-cache\r\n

Pragma: no-cache\r\n

\r\n

"washer_mode : OK\r\n"

"washer_status : FAIL\r\n"

PARAMETER	VALUE	DESCRIPTION
channel	0~"capability_nvideoin"-1	Channel of the video source.
washer_mode	wiper	Apply the wiper to the mode of washer control system. *Only available when capability_peripheral_c<0~(n-1)>_washer_support=1
	washer	Apply the washer to the mode of washer control system. *Only available when capability_peripheral_c<0~(n-1)>_washer_support=1
washer_status	on	Enable the functionality of washer control system. *Only available when capability_peripheral_c<0~(n-1)>_washer_support=1
	off	Disable the functionality of washer control system. *Only available when capability_peripheral_c<0~(n-1)>_washer_support=1
washer_dwelltime	15~999	Apply washer washer control system operation time (including the time when spraying and wiper actions take place). *Only available when capability_peripheral_c<0~(n-1)>_washer_support=1
heater_status	auto	automatic control the heater component to keep the device in a workable environment. *Only available when

		capability_peripheral_c<0~(n-1)>_heater_support=1
	trigger	heater component is work in force heater once. *Only available when capability_peripheral_c<0~(n-1)>_heater_support=1

Syntax: **(for querying API)**

```

http://<servername>/cgi-bin/admin/peripheral.cgi?channel=<value>&operation=get
[&supportdevice] -Get support peripheral device
[&washer_supportmode] - Get washer support modes
[&washer_mode] - Get washer mode
[&washer_status] - Get washer status
[&washer_dwelltime] - Get washer clean time
[&heater_supportstatus] - Get heater support control status
[&heater_status] - Get heater status
    
```

Example:

```

http://myserver/cgi-bin/admin/peripheral.cgi?channel=0&operation=get&supportdevice&washer\_status

Response:
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
supportdevice=washer,heater\r\n
washer_status=off\r\n
    
```

PARAMETER	VALUE	DESCRIPTION
channel	0~"capability_nvideoin"-1	Channel of the video source.
supportdevice	N/A	Get support peripheral device.
washer_supportmode	N/A	Get the support mode of washer control system, its value is the same with "capability_peripheral_c<0~(n-1)>_washer_mode". *Only available when capability_peripheral_c<0~(n-1)>_washer_support=1
washer_mode	N/A	Get the current mode of washer control system. It return the value of "washer_mode" * Available values are listed in

VIVOTEK

		"capability_peripheral_c<0~(n-1)>_washer_mod e"
washer_status	N/A	Get the current status of washer control module. The status is 'off' as default, which means the washer is stopped; and the status 'on' means the washer is running. *Only available when capability_peripheral_c<0~(n-1)>_washer_supp ort=1
washer_dwelltime	N/A	Get the current washer clean period of washer control system. *Only available when capability_peripheral_c<0~(n-1)>_washer_supp ort=1
heater_supportstatus	N/A	Get the support status of heater control system. *Only available when capability_peripheral_c<0~(n-1)>_heater_supp ort=1
heater_status	N/A	Get the current heater status. Normally it will be 'auto', it means the heater device is control by internal algorithm to keep in a suitable environment; Otherwise is 'trigger', it means the heater device is force enable to heat to an internal condition. 'trigger' status will be transfer to 'auto' after reach the internal condition. *Only available when capability_peripheral_c<0~(n-1)>_heater_supp ort=1

8.37 Optimized IR control

(capability_daynight_c<0~(n-1)>_optimizedir > 0)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

[http://<servername>/cgi-bin/admin/optimizedir.cgi?function=<value>\[&channel=<value>\]](http://<servername>/cgi-bin/admin/optimizedir.cgi?function=<value>[&channel=<value>])

PARAMETER	VALUE	DESCRIPTION
channel	0~"capability_nvideoin"-1	Channel of the video source.
function	getstatus, onetimeauto	<p>"onetimeauto": Camera will automatically adjust the IR zone one time only.</p> <p>"getstatus": Information of optimized IR control status and return value as below:</p> <p>optimizedir_c<0~(n-1)>_irmode: Indicate the IR current mode, available value is "auto" and "manual" mode.</p> <p>optimizedir_c<0~(n-1)>_irnum: The number of IR that camera supports.</p> <p>optimizedir_c<0~(n-1)>_irstrength: Only available when irmode is set as manual. It's a set of integers, which indicate the strength of each IR LED (e.g. 23,45,100,100).</p> <p>optimizedir_c<0~(n-1)>_irstatus: Current IR status, normal / adjusting: "normal": the IR LED strength has been fixed. "adjusting": the IR LED strength is adjusting.</p>

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?function=getstatus>

Response:

HTTP/1.0 200 OK\r\n

Cache-control: no-cache\r\n

Pragma: no-cache\r\n

\r\n

"optimizedir_c0_irmode='auto'"

"optimizedir_c0_irnum='5'"

"optimizedir_c0_irstrength='1,97,100,100,100'"

"optimizedir_c0_irstatus='normal'"

Syntax: **(for control API)**

[http://<servername>/cgi-bin/admin/optimizedir.cgi?channel=<value>&operation=<value>&irmode=manual \[&strength=<value>\]](http://<servername>/cgi-bin/admin/optimizedir.cgi?channel=<value>&operation=<value>&irmode=manual [&strength=<value>]) - Set IR strength

PARAMETER	VALUE	DESCRIPTION
channel	0~"capability_nvideoin"-1	Channel of the video source.
operation	set, settoall	"set" : set the strength of each IR LED separately "settoall" : use fixed strength for all IR LED
irmode	auto, manual	Irmode needs to be set as manual for adjusting IR LED strength.
strength	1~100	If the operation is set as "set", the number of strength values need to be the same as it of irnum. However, it needs only one value for strength when the operation is set as "settoall".

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=set&irmode=manual&strength=50,70,50,50,50>

Response:

HTTP/1.0 200 OK\r\n

Cache-control: no-cache\r\n

Pragma: no-cache\r\n

\r\n

"optimizedir_c0_irstrength='50,70,50,50,50'"

"optimizedir_c0_irmode='manual'"

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=settoall&irmode=manual&strength=100>

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
"optimizedir_c0_irstrength='100,100,100,100,100'"
"optimizedir_c0_irmode='manual'"
```

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=set&irmode=auto&strength=50,70,50,50,50>

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
ERROR: Parameter "irmode" must be set as "manual"!
```

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=set&strength=50,70,50,50,50>

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
ERROR: Must have the "irmode=manual" argument!
```

Syntax: **(for querying API)**

<http://<servername>/cgi-bin/admin/optimizedir.cgi?channel=<value>&operation=get>

[&support_irmode] – list all adjustment mode that IR supports

[&irmode] – Get current IR mode

[&irnum] – Get the number of IR zone

PARAMETER	VALUE	DESCRIPTION
channel	0~"capability_nvideoin"-1	Channel of the video source.
support_irmode	N/A	List all adjustment mode that IR supports
irmode	N/A	Get the current IR control mode.
irnum	N/A	Get the number of IR that camera supports.

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=get&irmode>

Response:

HTTP/1.0 200 OK\r\n

Cache-control: no-cache\r\n

Pragma: no-cache\r\n

\r\n

"optimizedir_c0_irmode='auto'"

Technical Specifications

Model	SD9364-EHL-v2	Dynamic Range	110 dB
System Information		Video Streaming	Adjustable resolution, quality and bitrate; Smart Stream II
CPU	Multimedia SoC (System-on-Chip)	Image Settings	Adjustable image size, quality and bit rate; Time stamp, text overlay, flip & mirror; Configurable brightness, contrast, saturation, sharpness, white balance, exposure control, gain, backlight compensation, privacy masks (Up to 24); Scheduled profile settings, defog, 3DNR, EIS, HLC
Flash	128MB	Audio	
RAM	512MB	Audio Capability	Two-way Audio
Camera Features		Compression	G.711, G.726
Image Sensor	1/3" Progressive CMOS	Interface	External microphone input External line output
Max. Resolution	1920x1080	Network	
Lens Type	30x Optical Zoom, Auto Focus	Users	Live viewing for up to 10 clients
Focal Length	f = 4.3 ~ 129 mm (30x zoom)	Protocols	IPv4, IPv6, TCP/IP, HTTP, HTTPS, UPnP, RTSP/ RTP/RTCP, IGMP, SMTP, FTP, DHCP, NTP, DNS, DDNS, PPPoE, CoS, QoS, SNMP, 802.1X, UDP, ICMP, ARP, SSL, TLS, NTCIP
Aperture	F1.6 ~ F4.7	Interface	10 Base-T/100 Base-TX Ethernet (RJ-45) *It is highly recommended to use standard CAT5e & CAT6 cables which are compliant with the 3P/ETL standard.
Iris type	DC-iris	ONVIF	Supported, specification available at www.onvif.org
Field of View	2° ~ 59° (Horizontal) 2° ~ 45° (Vertical) 3° ~ 71° (Diagonal)	Intelligent Video	
Shutter Time	1/8 sec. to 1/30,000 sec.	Video Motion Detection	Five-window video motion detection
WDR Technology	WDR Pro	Auto-Tracking	Auto-tracking on moving object
Minimum Illumination	0.42 Lux @ F1.6 (Color) 0.01 Lux @ F1.6 (B/W) 0 Lux with IR illumination on	Alarm and Event	
Day/Night	Removable IR-cut filter for day & night function	Alarm Triggers	Motion detection, manual trigger, digital input, periodical trigger, system boot, recording notification, audio detection, MicroSD card life expectancy
Pan Speed	0.1° ~ 300° / sec.	Alarm Events	Event notification using digital output, HTTP, SMTP, FTP, NAS server and MicroSD card File upload via HTTP, SMTP, FTP, NAS server and MicroSD card
Pan Range	360° endless	General	
Tilt Speed	0.1° ~ 300° / sec.	Connectors	RJ-45 cable connector for Network 10/100 Mbps PoE connection*1 Audio input*1 Audio output*1 AC/DC 24V power input*1 Digital input*4 Digital output*2 RS-485 for PTZ control (PelcoD protocol, Baud rate 2400)*1
Tilt Range	220° (-110° ~ +110°)	LED Indicator	System power and status indicator
Preset Locations	256 preset locations 128 presets per tour	Power Input	PoH/PoE (95W) AC/DC 24V
Pan/Tilt/Zoom Functionalities	128x digital zoom (4x on IE plug-in, 32x built-in), Auto pan mode, Auto patrol mode		
IR Illuminators	Built-in IR Illuminators up to 150 meters with Smart IR II, IR LED*2		
On-board Storage	Slot type: MicroSD/SDHC/SDXC card slot Seamless Recording		
Video			
Compression	H.265, H.264, MJPEG		
Maximum Frame Rate	H.265 & H.264: 60 fps @ 1920x1080 MJPEG: 30 fps @ 1920x1080		
Maximum Streams	4 simultaneous streams		
S/N Ratio	54 dB		

Technical Specifications

Power Consumption	PoH/PoE (95W): Max. 70 W (Heater on) Max. 51 W (Heater off) AC/DC 24V: Max. 63 W (Heater on) Max. 45 W (Heater off)
Dimensions	237 x 364 mm
Weight	7.1 kg (with bracket) 5.7 kg (without bracket)
Casing	IP66, IK10, NEMA 4X
Safety Certifications	CE, FCC Class A, VCCI, C-tick, NEMA 4X, UL
Operating Temperature	Starting Temperature: -40°C ~ 55°C (-40°F ~ 131°F) Working Temperature: -40°C ~ 55°C (-40°F ~ 131°F)
Humidity	90%
Warranty	36 months
System Requirements	
Operating System	Microsoft Windows 8/7 Mac 10.12 (Chrome only)
Web Browser	Chrome 58.0 or above Internet Explorer 10/11

Other Players

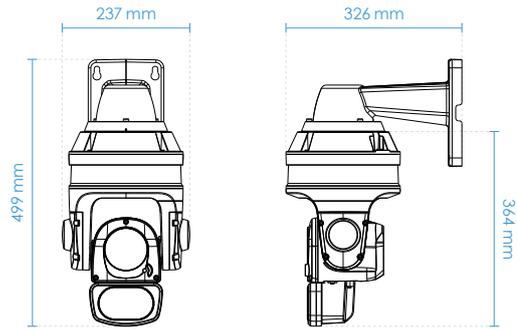

VLC: 1.1.11 or above
Quicktime: 7 or above

Included Accessories

Others

Wall mount bracket, I/O cable, screws, waterproof connectors, terminal blocks, quick installation guide, warranty card, alignment sticker, ground wire, T25 stardriver, desiccant bags

Electromagnetic Compatibility (EMC)

FCC Statement

This device complies with FCC Rules Part 15. Operation is subject to the following two conditions.

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the installation manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

CE Mark Warning

This is a Class A product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

VCCI Warning

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。

取扱説明書に従って正しい取り扱いをして下さい
