Before You Begin

Plug in the USB charging base and fully charge the mouse. The LED light on the charging base will turn from red to green when the mouse is fully charged.

Note: Constantly charging mouse when it is not needed will slowly degrade the mouse's battery memory. The internal rechargeable battery in the mouse can last several days between charges. The mouse should be returned to the charging base at the end of the day to ensure it is adequately charged.

Connecting the Mouse to Your Computer

Figure A

Connect the charging base by inserting the USB connection wire to your computer (Figure A). This connection provides power to the base and connection for the 3-port hub in the base.

Figure B

Install the Micro USB receiver (Figure B) into a USB port on the computer or into any of the USB ports on the charging station and wait for the device to Plug and Play. Your Seal Shield™ mouse is designed to use the default drivers on your computer, so no additional software is necessary.

Turning the Mouse ON and OFF

To turn the mouse ON, press the right button (when viewed from the bottom) and hold until the red light turns on. To turn the mouse OFF, press and hold the button until the red light turns off.

Pairing the Mouse with the Computer

If you have not already installed the Micro USB receiver please see the section called “Connecting the Mouse to your Computer” above. In most cases, the mouse will already be paired with the supplied receiver. If the mouse is not paired, or if you have replaced the receiver follow the steps below:

1. Insert the Micro USB receiver
2. Immediately press and the "Connect" button on the bottom of the mouse while holding the mouse <6 in (15 cm) from the dongle.
3. Wait for the red light to switch from blinking rapidly (1 cycle every .25 seconds), to blinking slowly (1 cycle every second).
4. The mouse and receiver should now be paired and operational.
5. If pairing is unsuccessful, unplug the Micro USB receiver and repeat the pairing instructions.

Note:
Ensure no other Micro USB receivers are plugged into a computer and within pairing range during the pairing process.

Recharging the Mouse

To indicate mouse battery life place mouse in charging base. If mouse is PLACED IN THE CHARGING BASE and NEEDS CHARGING the base light will turn RED. If the mouse is PLACED IN THE CHARGING BASE and battery is adequately charged the base light will turn GREEN. The light on base will remain off if no mouse is placed in base. To recharge PLACE MOUSE IN THE CHARGING BASE. The charging base indicator light will change from RED to GREEN when the mouse is adequately charged. The mouse should be returned to the charging base at the end of the day to ensure it is adequately charged.

Washing and Cleaning

See the recommended cleaning protocols on the Seal Shield Website.

IMPORTANT: The USB charging station and Micro USB receiver are not washable nor waterproof.
